ABOUT THIS REPORT

This is SeaWorld Entertainment, Inc.’s first Corporate Responsibility Report. It is designed to provide interested stakeholders with an introduction to our company’s mission and purpose and to the actions we are taking to ensure the health and well-being of the animals in our care, rescue and protect animals in the wild, minimize the environmental impact of our operations and create a strong culture where our employees are engaged and connected to our mission.

Data included in this report covers the period Jan. 1 to Dec. 31, 2016. Additional data from prior years is included where specified. The report was published in the spring of 2017, and we intend to provide a report or update on our corporate responsibility efforts annually.

We invite your feedback and questions at Corporate.Responsibility@SeaWorld.com.
It is a new era at SeaWorld Entertainment, Inc. Building on our legacy of helping people connect to animals and providing family-oriented fun, we are making our mission to create experiences that matter a more central part of all we do.

More than ever, people want to know that their hard-earned dollars are supporting companies they can believe in, and also providing a clear path to sustainability and making our mission to create experiences that are both fun and meaningful. That is why we designed Mako®, one of our newest roller coasters at SeaWorld Orlando, to focus on sharks, inspiring people to appreciate and protect them from human threats like shark finning. And, through our partnership with the renowned artist and conservationist Guy Harvey, we are working to inspire our guests to take action to protect them.

We will always have a deep commitment to animals and a passion for sharing their stories with our guests. In fact, our core purpose is to inspire people to protect animals and the wild wonders of the world. Here’s how we are working to do that:

**BUILDING A PURPOSE-DRIVEN COMPANY**

Our purpose is to inspire people to protect animals and the wild wonders of the world. Here’s how we are working to do that:

**CREATING EXPERIENCES THAT MATTER**

When we enable our guests to explore and learn about animals and the environment, we can inspire them to take action to protect them. This means creating experiences that matter: thrilling fun, education and advocacy, while engaging guests in SeaWorld’s larger purpose and mission. For example, we are turning our parks inside out to allow guests to see what goes on behind the scenes with SeaWorld’s extensive animal rescue and rehabilitation work. And our extension into virtual reality allows us to tell our story in a very different way, taking our guests behind the barriers to places that were once off limits, or to meet endangered, extinct or legendary animals.

**DELIBERATING FUN AND MEANINGFUL ATTRACTIONS**

For 2017, we announced one of the largest lineups of new attractions in our company’s history, which more explicitly integrates our focus on animal rescue, protection and conservation into the guest experience. At SeaWorld San Antonio, for example, Wave Breaker: The Rescue Coaster™, opening in the summer of 2017, will combine the adrenaline rush of a roller coaster with the inspiration of an animal rescue. Additionally, SeaWorld Abu Dhabi— which is being developed in partnership with Miral and is set to open in 2020—will take the concept of a next-generation SeaWorld park designed to engage, educate and inspire. It will be the first SeaWorld without orcas, and will integrate up-close animal experiences, mega attractions and a world-class aquarium.

**TAKING ACTION TO ADDRESS CHALLENGES**

Our decision to end our orca breeding program and transition away from orca theatrical shows reflects a broader and renewed commitment by our company to be open, listen, engage and evolve as society and our stakeholders evolve. Our partnership with the Humane Society of the United States is an example of our willingness to engage and collaborate with a broad range of organizations to advance our shared interest in protecting animals and advancing conservation.
STAKEHOLDER ENGAGEMENT

SEAWORLD ENTERTAINMENT IS COMMITTED TO LISTENING TO AND ENGAGING WITH OUR STAKEHOLDERS.

Like many corporations today, SeaWorld Entertainment has a wide range of stakeholders. Over the past couple of years, we have taken steps to become more open, transparent and proactive in how we engage and communicate on important issues. We know that understanding and learning from the perspectives of others makes our company stronger, more informed and better able to provide experiences that matter for our guests.

This Corporate Responsibility Report, our first, is another step in that effort. Society will always be evolving and, to be successful, our company needs to be responsive and to evolve with it. Our hope is that the report will provide a platform for ongoing conversation and feedback from our stakeholders.

Here are some examples of how we are engaging with our stakeholders:

GUESTS, COMMUNITY MEMBERS AND THE PUBLIC

Through our SeaWorld Cares website, we provide regularly updated information about our commitment to animals, and our educational and philanthropic efforts (www.seaworldcares.com). We also have a Youth Advisory Panel, made up of 14- to 20-year-olds from across the United States, to provide feedback about their park experiences and share their perspectives on our company’s approach on a variety of issues. We conduct regular employee surveys and hold town hall meetings with our employees to solicit feedback, but to support their development and increase their engagement. Therefore, in 2017, we instituted new programs to encourage more meaningful conversations between employees and their managers.

EMPLOYEES

We maintain a broad-ranging investor relations program that promotes timely and accurate dissemination of company information and open dialogue with all of the company’s shareholders through a number of channels, including quarterly earnings presentations, in-person meetings with stakeholders and analysts, regular Securities and Exchange Commission filings, our Annual Report to shareholders, and our Annual Meeting.

CONSERVATION AND ANIMAL PROTECTION ORGANIZATIONS

SeaWorld has been collaborating for many decades with several organizations to advance conservation and protect animals in the wild, chiefly through its participation in the SeaWorld & Busch Gardens Conservation Fund. More recently, SeaWorld has launched partnerships with the Humane Society of the United States (HSUS) and the National Fish and Wildlife Foundation (NFWF), to name a few, to advance the outlines of animals through research, advocacy and on-the-ground support. The goal is to find areas of commonalities and further shared interests.

POLICYMAGERS

We are more actively engaging with policymakers and advocating on policy issues that align with the focus on protecting animals and the wild wonders of the world. For example, in 2016, we voiced our support for the Global Trade Elimination Act and more.

INVESTORS

We maintain a broad-ranging investor relations program that promotes timely and accurate dissemination of company information and open dialogue with all of the company’s shareholders through a number of channels, including quarterly earnings presentations, in-person meetings with stakeholders and analysts, regular Securities and Exchange Commission filings, our Annual Report to shareholders, and our Annual Meeting.

Our animal care team includes board-certified animal welfare, husbandry, enrichment and veterinary care. With more than 1,500-person strong animal care team is among the most experienced and qualified in the world, making SeaWorld a global leader in animal training, while utilizing positive reinforcement. We provide daily enrichment and compassionate care. We provide the animals in our care with the opportunities to explore and interact with the animals in our parks.

Physical Health. Our animal care team includes board-certified veterinarians, technicians and animal care experts – including one of the only zoologically-based animal nutritionists in the world. We have onsite animal hospitals at each SeaWorld park and we opened a guest-facing, state-of-the-art Animal Care Center at our Busch Gardens park in Tampa, Florida, in 2014. We were also one of the first zoological organizations to build our own in-house diagnostic centers, which enable us to get clinical lab tests, X-rays, ultrasounds, and surgeries – all at SeaWorld. This means not only applying the best and most comprehensive standards, but also actively working to advance knowledge and improve standards. We do this by contributing to research and sharing our insights with other zoological organizations. For example, our early work to de-identify the orca calf, Oví-through the latest advances in marine veterinary medicine, science and zoological best practices for the rest of their lives.

Behavioral Health. SeaWorld and Busch Gardens have been at the forefront of advancing understanding and best-practice-related behavioral health in animals. Our approach is grounded in a philosophy of positive reinforcement and compassionate care. We provide the animals in our care with the opportunities to explore and mental challenges, and animals are never punished. We provide daily enrichment, and animals with mental health care is never dependent on orcas will continue to live at the parks' state-of-the-art habitats, where they will inspire millions of guests each year to take action to protect wild animals and the places they live.

Population Health. We are committed not only to being responsible stewards of our animal populations. That includes ensuring that we maintain the genetic diversity needed for healthy and responsible reproduction and the conservation of these beautiful creatures. Through the new format, SeaWorld’s orcas will continue to live at the parks’ state-of-the-art habitats, where they will inspire millions of guests each year to take action to protect wild animals and the places they live.

Just like animals, companies must adapt and evolve. For SeaWorld, however, one thing will always remain the same: We are committed not only to being inspired to take action. We believe the changes we have made in our approach to orcas will do just that.

A critical way we deliver on this purpose is to provide our guests opportunities to explore and interact with the animals in our parks. Across SeaWorld’s and Busch Gardens, we provide care for one of the largest zoological collections in the world. Our commitment to these animals includes applying world-class standards of care while striving to provide habitats reflective of the latest scientific knowledge. Our more than 1,500-person strong animal care team is among the most experienced and qualified in the world, making SeaWorld a global leader in animal well-being, husbandry, enrichment and veterinary care.

Our approach
We take a comprehensive approach to ensuring the health of the animals in our care. It focuses on:

SEAWORLD’S DEDICATION TO ANIMALS EXTENDS WELL BEYOND OUR PARKS AND INTO THE WILD.

Seaworld is a leader in animal rescue, and our aim is to become the largest marine animal rescue organization in the world. To do this, we invest in and contribute to research, education and conservation efforts that help protect and rescue species of animals at risk in the wild, as well as the habitats that are home to many vulnerable species. Our aspiration is to prevent animals in the wild from being imperiled, but when it does happen, Seaworld will come to the rescue. In fact, in 2016, Seaworld committed $50 million over five years to expand our overall rescue work, while supporting marine stranding networks in the United States and around the world.

COMING TO THE AID OF ANIMALS IN DISTRESS

Seaworld’s legacy of animal rescue spans more than five decades, during which time we have helped more than 29,000 ill, injured, orphaned or abandoned animals in need of our expert care. Working in partnership with state, local and federal agencies, our SeaWorld Rescue Team is on call 24 hours a day, seven days a week, 365 days a year. The Team moves into action whether environmental or manmade events threaten wildlife – from hurricanes to oil spills, and civilian vessels to vessel strikes. Our goal for every animal we rescue is to successfully rehabilitate and return it to the wild. Seaworld is an innovator in rescue and rehabilitation, and has helped develop specialized formulas to bottle-feed orphaned dolphins, prosthetics to save sea turtles, and a customized wetsuit to help injured manatees stay afloat. The small percentage of animals with conditions that would prevent them from surviving in the wild are provided lifelong care at SeaWorld or another qualified facility.

Seaworld’s founders established research as a priority from the outset of our company, opening the Hubbs-Sea World Research Institute prior to the opening of the first park in San Diego. Research remains an important part of how we both advance standards of care for animals in zoological facilities and protect animals in their habitats in the wild. Seaworld’s animal care scientists and researchers are recognized as leaders in the field. More than 350 peer-reviewed studies, articles and books have been authored in whole or in part by our team members, and their groundbreaking research programs help other scientists better understand and protect animals in the wild. We also collaborate with organizations to advocate for and advance shared conservation goals. For example, in 2016, SeaWorld and the Humane Society of the United States launched a partnership focused on combating the commercial killing of whales, seals and other marine mammals and ending shark finning.

Indeed, the work done by zoological facilities like ours is critical for the protection of animal populations worldwide.

Seaworld’s animal care scientists and researchers are recognized as leaders in the field. Protecting animals through research and conservation.

SeaWorld's founders established research as a priority from the outset of our company, opening the Hubbs-Sea World Research Institute prior to the opening of the first park in San Diego. Our parks provide a unique environment that allows our team and independent scientists to better understand marine animals. SeaWorld works with universities and research organizations, along with federal agencies such as the National Oceanic and Atmospheric Administration (NOAA) and the United States Fish & Wildlife Service (USFWS), and provides access to SeaWorld animals for scientists conducting studies on a variety of subjects. These studies complement and strengthen research efforts in the field – which our company also supports, through grants from the SeaWorld & Busch Gardens Conservation Fund, and by research foundations associated with and supported by SeaWorld, including the Hubbs-SeaWorld Research Institute.

Indeed, the work done by zoological facilities like ours is critical for the protection of animal populations worldwide.
CONSERVATION PARTNERS

Protecting animals and the wild wonders of the world depends on all of us working together. SeaWorld supports and partners with members of standing networks – the critical “first responders” for marine wildlife needing rescue and rehabilitation – as well as leading research and conservation organizations. Here are a few examples:

THE SEAWORLD & BUSCH GARDENS CONSERVATION FUND

The SeaWorld & Busch Gardens Conservation Fund is a nonprofit private foundation that supports wildlife research, habitat protection, animal rescue and conservation projects around the world. Since its founding in 2003, the Fund has granted more than $16 million to over 1,000 projects in 75 countries on all seven continents – including $1.6 million in 2016. In 2016, the Fund raised over $1 million to support animal rescue and conservation worldwide, including direct financial contributions from SeaWorld and through the company’s efforts to garner support from guests, suppliers and the community. And because SeaWorld covers all the Fund’s administrative costs, 100% of donations to the Fund and the community. And because SeaWorld covers all the Fund’s administrative costs, 100% of donations to the Fund and the community. And because SeaWorld covers all the Fund’s administrative costs, 100% of donations to the Fund and the community. And because SeaWorld covers all the Fund’s administrative costs, 100% of donations to the Fund and the community.

In 2016, SeaWorld San Antonio expanded its long-standing partnership with TMMSN, committing $1.1 million in additional resources and funding over three years. SeaWorld is providing a full-time employee to work at TMMSN’s Galveston, Texas, office, while also providing access to our veterinarians and animal care professionals. SeaWorld San Antonio also announced plans to build a new state-of-the-art facility at the park to provide 24-hour care for sick and stranded animals that need long-term rehabilitation.

Seaworld has given $1 million over the last two years for this initiative.

Guy Harvey

SeaWorld and acclaimed marine wildlife artist and conservationist Guy Harvey announced a new partnership in 2016 focused on ocean health and the plight of sharks in the wild. Together, SeaWorld, the Guy Harvey Ocean Foundation and the Guy Harvey Research Institute will collaborate on science and research to increase understanding of how to better protect these critical predators and their habitats.

In the largest private commitment of its kind ever made, SeaWorld is investing $10 million to study and protect endangered killer whales in the wild, with a particular focus on the Southern Resident killer whale population found off the coast of Washington. Launched in 2015 in partnership with the National Fish and Wildlife Foundation, the KWRCP has awarded nearly $1.1 million in grants to date – which has been matched by nearly $1.5 million from government, resulting in a total conservation impact of over $2.5 million.

The Everglades Foundation

SeaWorld announced a partnership with The Everglades Foundation in 2016 to help conserve Florida’s 102-water bodies of the Everglades ecosystem and become conservation leaders. SeaWorld also hosts training events for teachers from four Florida counties, empowering them to leverage the materials and information in their classrooms.

SeaWorld San Antonio also announced plans to build a new state-of-the-art facility at the park to provide 24-hour care for sick and stranded animals that need long-term rehabilitation.

Guy Harvey

SeaWorld and acclaimed marine wildlife artist and conservationist Guy Harvey announced a new partnership in 2016 focused on ocean health and the plight of sharks in the wild. Together, SeaWorld, the Guy Harvey Ocean Foundation and the Guy Harvey Research Institute will collaborate on science and research to increase understanding of how to better protect these critical predators and their habitats.

In the largest private commitment of its kind ever made, SeaWorld is investing $10 million to study and protect endangered killer whales in the wild, with a particular focus on the Southern Resident killer whale population found off the coast of Washington. Launched in 2015 in partnership with the National Fish and Wildlife Foundation, the KWRCP has awarded nearly $1.1 million in grants to date – which has been matched by nearly $1.5 million from government, resulting in a total conservation impact of over $2.5 million.

The Everglades Foundation

In 2016, SeaWorld San Antonio expanded its long-standing partnership with TMMSN, committing $1.1 million in additional resources and funding over three years. SeaWorld is providing a full-time employee to work at TMMSN’s Galveston, Texas, office, while also providing access to our veterinarians and animal care professionals. SeaWorld San Antonio also announced plans to build a new state-of-the-art facility at the park to provide 24-hour care for sick and stranded animals that need long-term rehabilitation.

SUSTAINABLE OPERATIONS

ENVIRONMENTAL CONSERVATION IS IMPLICIT IN OUR COMPANY’S PURPOSE. TO THRIVE, ANIMALS NEED VIBRANT ECOSYSTEMS AND HEALTHY HABITATS.

For SeaWorld Entertainment and our family of parks, conservation starts by working to reduce the environmental footprint of our operations. Creating thrills for our guests and providing the highest standards of care for the animals at our parks demands natural resources. As part of our commitment to conservation, our company has invested in numerous projects to reduce our energy and water use and the amount of waste we generate, always in consideration of the health and safety of our guests and the animals in our care.

ENERGY AND GREENHOUSE GAS EMISSIONS

SeaWorld Entertainment understands the adverse effects of climate change on ecosystems and the habitats many animals call home. When we reduce our energy use, we reduce the amount of greenhouse gas (GHG) emissions we generate and help to address this critical global challenge.

Between 2014 and 2016, our parks reduced energy use by approximately 4%, principally through LED lighting retrofits and installation of variable frequency drives to provide the right amount of power at the right time. To accelerate our progress, we are conducting in-depth energy audits at each of our parks in 2017. Findings from the audits will be used to identify and prioritize the energy efficiency opportunities with the greatest return for the capital invested.

In 2016, we also evaluated the feasibility of installing on-site renewable sources of energy. We identified a promising opportunity at our Aquatica San Diego water park and, in early 2017, we signed a 20-year power purchase agreement with Onyx Renewable Partners, L.P. Pending local and utility approval of the project and satisfaction of certain conditions, construction of the 1.3MW solar array in its parking lot is projected to begin in the fall of 2017 and be completed by the summer of 2018, providing renewable energy and shaded parking.

WATER

With our focus on marine life, water stewardship is predictably a key focus. Our parks have some of the most advanced and efficient water purification systems in the world, which provide the optimum environment for our marine life. We leverage this knowledge to reclaim and recycle wastewater for reuse, thereby decreasing our consumption of fresh water.

We have also implemented a range of other water conservation efforts across our parks. Many of these incorporate lessons from our facilities in San Diego and San Antonio, which, driven in part by drought conditions, have found innovative opportunities to re-use wastewater, reuse water for cooling buildings and adapt landscaping to require less water. We continually look for new ways to reduce our use of water in our parks and to support water conservation projects elsewhere.

Weatre we have laid the groundwork to impact marine debris and litter along shorelines and in coastal waters, estuaries and oceans — a visible reminder of the need to reduce waste. For our company, this starts with implementing the need for all of us to do our part to address this global challenge.

We have extensive recycling infrastructure in place in all our parks and actively encourage our guests to participate. Behind the scenes in many locations, we collect organic waste for composting or reuse as mulch. Our efforts are paying off: In 2016, 42% of the waste we generated was recycled, a 20% improvement since 2014.

For our parks, recycling means reducing the size of landfills and the need to manage and prioritize the energy efficiency opportunities with the greatest return for the capital invested.

Use less energy is also good for the company’s bottom line. Using less energy is also good for the company’s bottom line. When we reduce our energy use, we reduce the amount of greenhouse gas (GHG) emissions we generate and help to address this critical global challenge.

In 2016, we also evaluated the feasibility of installing on-site renewable sources of energy. We identified a promising opportunity at our Aquatica San Diego water park and, in early 2017, we signed a 20-year power purchase agreement with Onyx Renewable Partners, L.P. WASTE

We have laid the groundwork to impact marine debris and litter along shorelines and in coastal waters, estuaries and oceans — a visible reminder of the need to reduce waste. For our company, this starts with implementing the need for all of us to do our part to address this global challenge.

We have extensive recycling infrastructure in place in all our parks and actively encourage our guests to participate. Behind the scenes in many locations, we collect organic waste for composting or reuse as mulch. Our efforts are paying off: In 2016, 42% of the waste we generated was recycled, a 20% improvement since 2014.

For our parks, recycling means reducing the size of landfills and the need to manage and prioritize the energy efficiency opportunities with the greatest return for the capital invested.

RESPONSIBLE SOURCING

Corporate responsibility extends to how we source the goods and services needed to operate our parks and to serve our guests. Our Supplier Code of Conduct articulates SeaWorld Entertainment’s expectations that our suppliers treat their employees with dignity and respect, maintain just and decent working conditions, adhere to all applicable laws and regulations and make their products in a way that respects and protects the environment.

In 2016, as part of our broader partnership with the Humane Society of the United States (HSUS), we expanded on these expectations with a new Responsible Food Sourcing Policy, which outlines our company’s commitment to partner with food suppliers that deliver products that meet, or exceed established sustainable, healthy and humane food standards.

We have also made a variety of commitments related to the sourcing of particular products, such as eggs, pork, seaweed and coffee. By early 2017, we had achieved our goal of converting to 100% cage-free eggs. We are also well on our way to our goal of purchasing all pork cuts from suppliers that have announced a commitment and published targets to convert to group-housed humane farming. In addition, in response to growing guest demand and through our partnership with the HSUS, we have taken steps to expand the number of palm-based food offerings on our menus across our parks. See our website for more details.
ENDURING BUSINESSES GET THE FUNDAMENTALS RIGHT – AND THAT STARTS WITH HAVING GREAT PEOPLE AND A STRONG CULTURE.

At SeaWorld Entertainment, our employees – or ambassadors as we call them – are our heart and soul. When our ambassadors are empowered and inspired, they create experiences that matter for our guests. While our more than 28,000 year-round and seasonal ambassadors represent a diverse range of backgrounds and experiences, they share one common trait: They are passionate about what we do at SeaWorld. In our 2016 employee survey, 89% of our ambassadors told us that they understand and believe in our company’s core purpose. This level of engagement drives our culture and shapes the experiences our guests have in our parks.

ALIGNING AROUND OUR VALUES

The high level of engagement by our ambassadors is noteworthy, given that the past few years have been a period of significant change for our company. As we made our debut as a publicly traded company, enhanced our mission, ended our orca breeding program and made numerous other shifts across our business, our employees have remained engaged and passionate about who we are and what we do.

We have embraced this period in our company’s history as an opportunity to look deeply at our culture and make sure all our employees understand and are aligned around our core values and purpose. We have also reexamined our approach across a broad range of workplace issues, from updating our compensation and benefits structure to overhauling our performance management process. These efforts are all aimed at creating the right incentives, support and guidance for our employees to create meaningful experiences for our guests.

One of our primary areas of focus is strengthening how we support and enable our employees’ development. The foundation for doing this, we believe, is opening up the lines of communication between managers and employees to share feedback, expectations and objectives. In addition, our most recent employee survey found a clear link between levels of engagement and the degree to which employees are having meaningful conversations with their manager. We recently launched a new initiative, called The One, designed to ensure that meaningful conversations are happening regularly between leaders and those they lead.

FOCUSBING ON SAFETY

Ensuring the safety of our guests and employees is our highest priority and a core part of our culture. Our guests expect to have a great time visiting our parks, and our employees are entitled to a safe, comfortable workplace. We have health and safety committees at each of our parks that implement policies, provide employee training and help drive continuous improvement in our processes. At our family of parks, we meet or exceed all safety guidelines set forth by state agencies and industry organizations, as well as our attraction manufacturers.

FOSTERING DIVERSITY AND INCLUSION

SeaWorld Entertainment is committed to creating an inclusive workplace that reflects the diversity of the millions of guests we welcome each year and where all of our employees have the opportunity to achieve their full potential. Our focus on diversity also extends to our supply chain, where we source from minority-, women- and veteran-owned enterprises. In 2016, we spent over $34 million with diverse suppliers.
EDUCATIONAL PROGRAMS

Since 1964, more than 400 million guests have visited a SeaWorld Entertainment park and experienced attractions designed to educate and inspire. Our in-park programming is just one of the ways we work to inspire action through education. Here are some examples:

Instructional Field Trips: Hundreds of thousands of school children visit our parks each year to participate in programs that are grade-specific and align with state science curriculums and the national Next Generation Science Standards.

Teacher Workshops and Resources: SeaWorld and Busch Gardens offer numerous teacher workshop series and extensive classroom resources, activities and teacher’s guides. Teachers are also provided with complimentary passes to visit SeaWorld parks throughout the year.

School Visits: Each year, SeaWorld and Busch Gardens professionals visit school children throughout the country who may not be able to reach our parks and interact with the animals. Our animal ambassador program brings both native and exotic wildlife into schools to teach youth to behave responsibly in interacting with wild animals and how to contribute to the conservation of species worldwide.

Educational Television: Sea Rescue™ is the Emmy® Award-winning TV show that showcases the work of the SeaWorld Rescue Team and partner organizations in responding to distressed wildlife. In the Emmy-nominated Wildlife Docs™ TV series, we go behind the scenes to illustrate the care given to the animals that live at Busch Gardens Tampa Bay. These programs reach millions of viewers each year and inspire youth to both protect wildlife and consider careers in conservation.

Digital and Online Education: The SeaWorld.org website features educational material, including species reference resources, classroom curriculum, zoological career information, and environmentally focused activities. ShamuTV®, an online video series, has been viewed over 1 million times. We also deliver live educational programs via Skype.

MyActions.org: We created a social media platform to allow participants to share what they are doing to benefit the environment and encourage one another to take action. It is also a forum where they can interact with other conservation leaders across the country.

SUPPORTING COMMUNITIES

We are committed to the communities in which our theme parks are located and focus our philanthropic efforts in three areas: animal preservation and stewardship; youth development and education; and community initiatives that address environmental sustainability. As part of these efforts, we partner with charities across the country whose values and missions are aligned with our own by providing financial support, in-kind resources, strategic guidance and hands-on volunteer work. Through our SeaWorld Cares, Busch Gardens Cares and Sesame Place Cares initiatives, our employees are actively involved in volunteer activities, such as beach and river cleanup efforts.
