## Eastside Distilling (EAST-NASDAQ)

**Eastside Distilling, Rich, Glazer's and Walmart is an unbeatable combination in California. Successful launch of RRW pushes sales and earnings higher.**

In our opinion EAST could grow at over 35% compounded over the next five years. Given the growth in the U.S.A. and Canada we feel it deserves a premium valuation to the group based on forward revenue projections.

Current Price (03/07/18) \$7.15  
Valuation \$8.00

### OUTLOOK

With its recent expansion Eastside Distilling has the potential to be one of the larger craft distilleries in the industry. Its broad spectrum of craft spirits sets it apart from much of its competition and it has marketing agreements with several of the largest distributors, including Southern Glazer's, by far the largest distributor in the industry.

All of its products are handcrafted from natural ingredients in small batches for unequaled quality and taste.

The craft spirits industry is growing rapidly, and whiskeys, as produced by Eastside, are becoming a more important part of the industry. The relationship with John Rich is driving distributor agreements across the US.

Our current price target is \$8.00 a share

## RECENT NEWS

Southern Glazer's Wine and Spirits, the largest spirits distributor in the US by a factor of 2, will distribute Redneck Riviera Whisky in California, the largest spirit consuming state, using its Walmart team (and others) to reach grocery chains and liquor stores.

Southern Glazer's is already a distributor of Eastside 's products and RRW has generated significant interest in California. Shipments will start this month.

We have increased our revenue and earnings forecasts to reflect pipeline (inventory) filing in the first half of this year. We have adopted a conservative stance, after adjusting for seasonality, for the second half and into 2019.

Our published revenue numbers are based on net sales and not gross sales (net sales plus excise taxes). Gross sales will be impacted by the decline in excise taxes which is significant in 2018. In prior years excise taxes have been close to 30% of gross sales and will be dropping to less than 10% of gross sales in 2018.

Eastside Distilling has announced that its MotherLode subsidiary (acquired in March 2017) and Dear Mom Wine Co., a Portland based producer of premium wines, have agreed that MotherLode will produce canned versions of all Dear Mom's wines in 1Q18.

Dear Mom Wines is a fast growing producer of red, rosé, white and sparkling wines for the Oregon and Washington State markets. Overall the canned wine market has grown at 100% over the last three years. Dear Mom Wines produced 6,000 cases in 2017, its first year of sales, and expects to sell 16,000 cases in 2018.

RNDC is adding N. Dakota, Nebraska and Oklahoma to the states into which it will sell RRW. All in all the RRW looks to be Eastside's best and most widely distributed product.

The quick acceptance of the Redneck Riviera concept could encourage John Rich to add another product to his stable.

Eastside Distilling has announced that Redneck Riviera Whiskey (RRW) is now being distributed in South Dakota by RNDC, who has submitted orders to EAST. RRW is now being shipped into 10 states including Oregon. Eastside expects more distributors to feature the brand in the current quarter.

We are looking for additional sell-through news as distributors place more orders.

Information Resources Inc. (IRI) has released retail sales data for the beverage industry. In the spirits category overall sales for the 52 weeks ended May 14, 2016 volume grew by 5.8% to 54.674 billion cases and revenue increased by 5.1% to \$6.93 billion.

The Distilled Spirits Council, Washington, D.C. announced that whiskey sales volume was up 6.8% with revenue increasing by 7.7% in 2016. Overall, dark spirits were the leading spirits. Crown Royal Canadian, with a flavour profile similar to RRW, increased in volume by 4.5%.

The company has announced that the impact of the Tax Reform Act was a reduction of \$90,000 in taxes paid in January as compared to a year ago. Excise taxes paid in 1Q17 were about \$175,000.

Redneck Riviera Whiskey will be available in Walmart in Florida, California and Louisiana! Walmart has authorized the sale of the whiskey in stores in two of the three largest states in terms of number of stores (Texas is number 1). Florida had 343 stores and California had 296 out of the 4,953 in the U.S.A. in 2015, the last year for which we can find such data. Louisiana had about 90 stores in 2008. This clears the way for Eastside and its distributors to sell the whiskey to individual Walmart stores within those states.

At the moment Eastside may not have sufficient inventory of the whisky to satisfy the stores stocking requirements or potential demand, but that's not a bad thing.

Eastside Distilling has announced Republic National Distributing Company (RNDC) will distribute Redneck Riviera Whiskey in Texas, Louisiana, Alabama, Georgia, Florida, Mississippi and North Carolina.

Promotion for the whiskey will be multi city tours by John Rich and local promotions on TV, radio and in print. This is a significant boost in brand identity that will benefit Eastside. It has been announced, and reported by us, that the Redneck Riviera concept can be applied to other spirits such as vodka, rum, and even bourbon. This follow-on cross selling could open up markets for Eastside at a relatively low cost of entry.

The top rated restaurant in Portland, **Q Restaurant and Bar**, has added Eastside's Burnside Bourbon to its spirit selection, joining Portland Potato Vodka, at the bar. **Q** is rated the number one out of 3,350 restaurants in Portland. 83% of the reviews ranked it as five stars overall with a consistent five star ranking of the food.

With the addition of West Tennessee Distributing Co. (WTCD) Eastside now has full coverage of all of the large cities in the state. WTCD covers Memphis and adjoining counties.

Redneck Riviera Whisky will now be available in all "wet" counties (11) in the state, as well as some that are "moist" (70 where sales are allowed in some locations). There are still 14 dry counties, including the county where "Jack Daniels" is made. However, the State law allows distilleries to sell one commemorative product on location regardless of local statutes.

Eastside Distilling has signed an exclusive agreement with Lipman Brothers, the largest liquor distributor in Tennessee. Lipman Brothers is the largest liquor distributor in the state. With headquarters in Nashville and subsidiary operations in Knoxville and Chattanooga (but not Memphis) it has 77% geographical coverage of the state.

Tennessee is a franchise state (no state liquor commission). The three tier market of producer, distributor and retailer enables a rapid response to market needs and changes and Redneck Riviera could be in the retail chain by mid January.

Over the weekend of Jan. 6, 2018 John Rich and Eastside Distilling had a private party at John Rich's home in Nashville TN. This party was the launch of Rich's Redneck Whiskey to the Southeastern US states spirits industry and to the national and regional media. Regional liquor distributors and representatives of national liquor distributors were present.

Guests were entertained by Big and Rich, Avenged Sevenfold and Gretchen Wilson ( who sang her signature song Redneck Woman). Sliders and Redneck whiskey were served.

After the prelaunch events and concert in Portland OR by John Rich there has been significant demand for the whiskey in the Eastside Distilling tasting rooms. The company has responded by making the spirit available prior to its official launch schedule in January.

Income from the sale of this whiskey goes to Eastside Distilling.

On Jan. 04, 2018 the company changed its ticker from ESDI to EAST.

The tax bill just enacted did contain the tax relief for craft distillers that we had previously discussed. We had adjusted our earnings forecasts based on our sales forecasts and did make minor adjustments for 2018 and 2019. The tax bill provides relief for two years. Our estimates assume the relief will be continue in 2020 and beyond. The reduction is for the first 100,000 proof gallons (one US gallon is 3.7853 liters). This is a little over one million bottles of 100 proof spirits.

On Tuesday Dec. 12, 2017 John Rich and Eastside Distilling hosted a pre-launch meet and greet event at Eastside Distilling's HQ in Portland Oregon.

This included meeting with fans and many media interviews with the press, TV and radio stations. Links to these interviews can be accessed through the company's press release and through Eastside's web site.

The local radio station "The Wolf, KWJK" hosted a charity concert at the University of Portland where John Rich performed.

During a conference call Eastside Distilling management and John Rich outlined the opportunities for the joint venture of Eastside and Rich Marks.

Rich Marks is an established name in the U.S.A. It has a range of products from western boots (California is its largest boot market) to beef jerky sold in over several thousand points of sale (POS) across the SE. They sell apparel and have an on-line presence under RedneckRiviera.com.

In early 2015 John Rich outlined his plans to expand his brand to include restaurants (there are now two, Nashville and Las Vegas) liquor, cigars and other ventures.

Income from the sale of liquors go to Eastside. There are no royalties but John Rich will be reimbursed for out of pocket expenses. The License is for 10 years. After the first three years Eastside must meet certain sales targets.

John Rich is an established Country and Western music star. He has relationships with many retail establishments, including bars, and grocery chains across the SE. U.S.A. Together with Eastside he develop relationships with liquor distributors that go beyond those that Eastside has currently.

The whiskey will be a premium brand product. The flavour profile is expected to be similar to that the best selling Canadian whiskeys. As mentioned in our previous reports the price points for premium whiskeys are in the range of \$20 to \$30. Crown Royal, for example, is one of the best selling whiskeys in the US and sells for between \$25 to \$35 per 750 ml bottle depending on the outlet. Crown Royal offers flavoured and premium products at higher prices.

John Rich will advertise the product. There are more Country & Western radio stations across the US than any other genre. Although radio is dying media it still commands a major presence in the SE US. John Rich will use this media, as well as TV stations, to advertise his shows and concerts where he will sponsor the new whiskey.

Branding will be done by Eastside and Sandstrom Partners.

In the near term there does not appear to be any downside to the agreement. There are no up-front expenses, the initial commitment by Eastside is \$40,000 a year. We expect market entry in 1Q18.

During the third quarter of 2017 Eastside Distilling shipped a total of 6162 cases of spirits, an 55% increase from last year. This included private label shipments of 700 cases. Without the private label the increase would have been 37% Y/Y.

	2015A	1Q16	2Q16	3Q16	4Q16	2016A	1Q17	2Q17	3Q17
Cases sold [12*750 ml]	10,215	3,148	3,374	3,974	5,100	15,596	5,937	4,928	6,162
Gross price per case`	\$228	\$198	\$186	\$200	\$196	\$195	\$140	\$179	\$145
Gross revenue, dollars in millions	\$2.327	\$0.622	\$0.628	\$0.796	\$1.000	\$3.043	\$0.830	\$0.883	\$0.895
Net price per case	\$166.62	\$147.24	\$149.47	\$139.45	\$103.92	\$135.16	\$103.17	\$122.77	\$100.29
Net Revenue, Dollars in millions	\$1.702	\$0.464	\$0.504	\$0.554	\$0.530	\$2.108	\$0.613	\$0.605	\$0.618
Excise Taxes as % Gross revenue	26.82%	25.47%	19.63%	30.40%	46.00%	30.69%	26.15%	31.48%	30.95%

The change over in bourbon branding and cask maturation as well as dislocations from moving to the new facilities limited the availability of the new bourbons but the popularity of the Portland Potato Vodka had a significant impact on case growth as well as the price realization per case. Vodkas sell at lower priced than other spirits and the gross selling price declined from \$200 a case to \$145 a case. The new vodka has a higher than average alcohol content (proof), as does the new bourbons, and this increases the tax per case. As a result the net revenue was below our expectations.

The company is redefining its retail presence in Oregon. Many of the mall locations do most of their business in the fourth quarter of the year whereas the expenses occur in every quarter. By eliminating locations during the slack months but opening more kiosks over the Thanksgiving to New Year drinking season overall sales at a much higher margin should ensue.

The new can lines now have the capability of making Ready To Drink cans and all of the necessary government approvals have been obtained. Eastside is now marketing this to potential customers. RDT gross margins are well over 60%.

Eastside Distilling and John Rich (a well known Country and Western singer and composer) have formed a subsidiary, Redneck Riviera Whiskey Co., a LLC in Tennessee. We expect significant news about this combination soon.

A 1,000 cases per month milestone was reached by Portland Potato Vodka in October, 2017, a triple in volume from October, 2016. This vodka is becoming a popular spirit in local bars.

The latest data from The American Craft Spirits Association (ACSA) outlined the continued growth of craft distilling in 2016 and into 2017.

Case volume increased by 18.5% in 2016, to 5.8 million cases. Retail sales grew by 25% to \$3 billion. The market share of U.S. craft spirits more than doubled in value, from 1.2% to 3.8%. Exports grew by 8.2%.

More relevant to ESDI is that distillery and tasting room sales 34% of all sales for small craft distilleries whereas for large craft distilleries 58% of their total business was out of state.

The Craft Beverage Modernization and Tax Reform Act of 2017, commonly known as S.236, now has 52 US Senators signed on as co-sponsors. Together with the 281 co-sponsors of the companion bill, H.R. 747, in the House it ensures the passage of tax reform for all three of the major alcoholic groups, spirits, wine and beer.

Effective December 2018 the bill reduces excise taxes on spirits (as produced by Eastside Distilling) to \$2.70 per proof gallon (100% alcohol) on the first 100,000 gallons of distilled spirits. This equates to 250,000 gallons of 80 proof spirits. or 1,261,655 bottles of 750 ml. The tax per case will be reduced to \$2.43 a case on 100 proof spirits. Eastside Distilling has paid \$36 a case or more in the past (average proof is not reported).

So, all of ESDI's production in the foreseeable future will be taxed at the lower rate. Also the tax is applied to product sold and excludes product aging.

This equates to an estimated reduction in payments (expenses) by ESDI of at least \$1 million in 2019 as compared to what it would have been under the old regulations. It does not change our estimates of net sales.

The new Burnside Bourbon is now available for sale throughout Oregon including the company's tasting rooms.

Eastside has announced the launch of the Motherlode RTD (Ready To Drink) canning line and the company's series of craft spirits and customized cocktails.

The new line will produce Ball Corp.'s (NYSE: BLL) slim can in various sizes from 187 ml to 250 ml (8.45 fluid oz.). The usual beer can is 12 oz or 355 ml..

The RTD is a fast growing segment for wine and cocktails, providing the customer with a convenient alternative to premixed bottled drinks or the purchase of the various ingredients for mixers.

The canning line should provide Motherlode and Eastside with a new source of revenue from custom canning as well as a outlet for Eastside's broad line of craft spirits.

Eastside Distilling has announced the first deliveries of West End Blend, an American whiskey finished in Oregon Oak. Other whiskeys, bourbons and a rye, all finished in Oregon Oak, will be introduced later this year. Oregon Oak is a porous wood with a high concentration of a vanilla like flavouring material which imparts a unique flavor to the spirit.

The striking new design of the bottles is a result of the collaboration with Sandstrom Partners, significant shareholder, and we expect the new branding to spread across all of Eastside's products.

When a company sells an underwriting they usually have an option to sell a few more shares (units) if demand and price warrants it. This is an over-allotment option. The underwriters have exercised their option and added 0.18 million units at \$4.49 to the recent offering. This will add \$0.808 million gross proceeds to the company, raising a total of \$6.12 million. We have adjusted our estimate to reflect the additional shares.

Recent data from trade sources show continued above average growth for whiskey with Fireball Canadian up 15% Y/Y; Crown Royal Canadian up 8% and Jack Daniels American up 4.6%

On August 14, 2017 Eastside Distilling reported its 2Q17 results and held a conference call after the close of the stock market.

Case sales increased 46% Y/Y but were below our latest estimate; although six month case sales were in line with our forecast early this year. Revenue after excise taxes increased 32%. Excise taxes, as a percentage of gross revenue, increased to 31.5%, the second highest level over the past three years.

Inventory at the end of the quarter increased by 53% from first quarter levels. Valuation is on the lower of cost or market and is sold on a FIFO basis. The market value of the inventory is much higher than the value on the balance sheet.

Net price per case declined due to promotional discounts on the larger bottles of potato vodka as well as market discounting by competitors in the Oregon market.

Portland Potato Vodka was the big winner in the quarter, and it has continued its growth, up over 62% as compared to August 2016. Brown spirits (bourbon and whiskey) continue to grow on an industry wide basis.

Based on the improved outlook for the third quarter, the influx of cash from the public offering (the conversion of the warrants as the stock price increases should offset the need for cash for more working capital) and pay down of debt we have raised our price target to \$8 a share

The company has announced the pricing of underwritten public offering of 1.2 million units consisting of one share of stock and one warrant priced at \$4.50 a unit. This will raise \$5.4 million before offering expenses. The warrants will have an exercise price of \$5.40 and will expire in five years.

This offering will be sufficient for Eastside to be listed on the NASDAQ Capital Market. Such a listing allows the stock to be purchased by money managers without filing a "sophisticated investor" letter and is very positive for the stock.

Eastside distilling, in collaboration with Secret Aardvark, will produce a habaneros infused potato vodka for (initially) limited distribution. This unique combination is an excellent spirit for use in Bloody Mary's. The habaneros is a very hot chili pepper and is a common ingredient in spicy food and sauces. The production of spirits like this is the epitome of the classic nature of craft spirits and should add to the reputation of Eastside and its people.

Mel Heim, Eastside's highly regarded Master Distiller, will hand produce a well known vodka for a local Russian restaurant. The produce will be bottled for Troika Spirits by Motherlode Bottling. The local restaurant, Kachka (Five stars for food and drink on TripAdvisor), has offered many infused vodkas to be consumed in the restaurants but has also sold the Kachka Horseradish Vodka for consumption away from the premises. Kachka needed a specialized distiller to produce higher quantities of the vodka whilst retaining its unique flavor and quality. The agreement illustrates the capabilities of Eastside in producing small batches of craft spirits for the local markets at competitive prices.

Eastside Distilling has completed its planned consolidation of production with the Motherlode facility and will immediately benefit from the reduction in costs. The consolidation will provide Eastside with lower costs and higher throughput including bulk shipment of spirits from the Big Bottom Distillery. Buying materials in bulk at lower unit costs and using more efficient, and less expensive, bottling equipment should have an immediate positive impact on gross margins.

The company has opened a new tasting room (retail outlet) in Bridgeport Village Mall with expanded offerings beyond spirits. The outlet will offer a full complement of Oregon Craft Spirits, which is the company's new retail brand encompassing Eastern Distilling's products as well as Below Deck and Big Bottom's products. The outlet will also sell local cocktail mixers, jellies, caramels as well as the CEO's favorite Secret Aardvark hot sauces.

Tasting rooms not only allow customers to find spirits they identify with and then buy but the prices are close to full retail prices. In our opinion, sales in these outlets have the highest gross margins of all the company's sales outlets.

The adoption of a new retail brand identity more closely identifies the company's products with its source (Oregon) and class (Craft spirits) of products making it easier to remember within the distribution network outside of Oregon and surrounding states.

Eastside Distilling has reported that the introduction of (recently acquired) Big Bottom Distilling's product line into the Oregon retail tasting locations has been highly successful. These sales have above average profitability and sales are up over 200% as compared to June of 2016. Management stated that the acquisition should immediately accretive.

On June 12, Eastside Distilling announced that the Directors had approved a 1-for-3 reverse stock split, reducing the share count from 9.94 million to 3.313 million. The impact was a decline in the stock price from \$6.00 to \$4.50 with unusually high volume. A reverse split, in this case, bring the stock price within the requirements of major national stock exchange, such as NASDAQ. Many institutional money managers will not buy penny stocks that are traded on the equivalent of the "pink sheets". With a listing on a major exchange, for example the NASDAQ, the stock is still available to its existing stockholders as a well as being attractive to the institutional market. The ability to attract capital is easier and an active listing makes transactions cheaper.

On May 15, 2017 ESDI held a conference call to discuss its first quarter results and the progress made to improve its prospects for 2017 and 2018.

Revenue (Net sales of \$0.6 million act. versus \$0.7 million est.) and net income (\$0.9 million loss for both actual and estimate) were in line with our projections. Cases sold made a significant jump to 5,937 as compared to 3,146 a year ago. Much of the gain was due to increased sales of Portland Potato Vodka and private label spirits, both of which are lower priced but have better gross margins than the other products.

The acquisitions of Motherlode and Big Bottom should have a positive impact on gross margins in the second half of this year and through 2018. In the first quarter the company had concentrated its efforts in the Oregon area, where sales grew 30% Y/Y, and has placed more emphasis on special event sales. Moves into Alaska should bolster second half revenue.

Eastside Distilling has acquired Big Bottom Distilling [BBD], a small craft distiller located in Hillsboro, Oregon.

BBD makes and markets a number of award winning craft spirits, including the "Warehouse Series", a boutique line of limited production spirits sold to collectors. Most of the company's

products are sold in Oregon, California and Illinois. BBD will continue as a separate entity and will produce spirits in collaboration with Eastside Distilling. BBD will add capacity for ESDI and it can produce innovative products designed by ESDI but based on BBD's product line.

ESDI paid for BBD with 84,286 shares of common stock. Based on the recent prices of the common we estimate that the deal was at about 1.2 times revenue. ESDI is currently selling at close to 6 times revenue.

On March 31, 2017 Eastside Distilling filed its 10K for 2016 with the SEC and held a conference call on April 6, 2017 to discuss the results.

Gross sales declined from the 4Q15 due to a change in strategy made in the 3Q15. Revenue had been driven by volume and it was decided to emphasize higher margined products, albeit at lower price points, such as the popular Potato Vodka. One impact of this change was an increase in excise tax per case as a proportion of gross sales per case. Excise taxes are based on the alcohol content and do not depend on selling prices.

As we had mentioned special event and retail sales declined in 2016 due to fewer tasting rooms. This should reverse in 2017 since new rooms have been added. This revenue carries no distributor costs.

Sales outside of Oregon increased from \$0.2 million to nearly \$1 million, sales from retail operations declined from \$1.3 million to \$1.2 million and sales to the Oregon Liquor Control Commission increased from \$0.7 to \$0.9 million.

The company has announced its first sales in Alaska and we expect continued growth in sales outside of Oregon.

Eastside distilling stated that its ah sufficient cash and cash flow to carry it through the next twelve months. The costs of raising money had a significant negative impact on cash flow in 2016.

The company intends to move its spirits more into the Super Premium sector of the spirits market, with an emphasis on the Potato Vodka and the Burnside Oregon Oaked Bourbon (with a higher alcohol content). Since the company now has bottling capability it can offer private label spirits and small volume seasonal offerings at minimal extra costs and above average selling prices.

Other areas of revenue are e-commerce sales, but there may be legal problems since the laws on wine may not carry over to the spirits world.

Overall we have a positive outlook for increased revenue and declining expenses for 2017 and 2018.

On March 14, 2017 the company announced that it has acquired MotherLode Craft Distillery of Portland, Oregon. Motherlode is a custom bottler and provider of production support to craft distilleries in the Portland area. The founder of MotherLode will join Eastside.

Eastside will relocate most of its operations to MotherLode's facility, which will be expanded to handle large volumes of spirits, including a pneumatic bottling line.

The acquisition will reduce the operation costs of Eastside and will generate additional revenue to the company.

The cost of the acquisition was 260,000 shares of stock, valued at \$0.377 million at the time of the purchase. This was about one times 2016 revenue. Eastside's stock is currently selling at close to five times revenue. The cost is expected to be recouped within 18 months.

Eastside Distilling is in the process of negotiating a sublease in a new manufacturing facility. They are expecting to move in no later than the end of June, 2017. The new facility will be leased at a lower cost than the older warehouse.

The company has terminated the old lease at its MLK warehouse. This facility is in an old building that is not capable of taking some of the new equipment needed for increased production at a lower cost. A new bottling line will be installed in the new building and this may not have been permitted in the old warehouse.

On Wednesday, Feb. 8, 2017 Becele S.A.S. de C.V. sold stock in an IPO on the Mexican stock exchange and raised \$900 million USD for a market cap. of \$6.4 billion . The company is better known as the producer of Jose Cuervo tequila with the largest worldwide market share. Revenue has grown from about \$12 billion pesos in 2014 to \$18.5 billion pesos in 2016. The issue was oversubscribed, illustrating the public's interest in distilled spirits.

The company has announced that it will double the number of tasting rooms, from two to four, in Oregon. This is important for a number of reasons. Margins are significantly higher since there is no discount to the distributor. This can be seen in the third and fourth quarter financial results in prior years. Tasting rooms are excellent outlets for seasonal spirits and for local varieties that are produced in small quantities. These outlets can be used to gauge interest in small batches of special spirits and can be used to test the interest in a new spirit.

Tasting rooms are very popular during festivals or special events where a lot of people stop and try a sample who would not enter a pub or bar. Venues can be selected based on attendance with a higher ratio of adults that are more likely to imbibe.

Eastside Distilling has hired L&A Social Media to expand its marketing efforts through social media with initial efforts on increasing its exposure to Portland Potato Vodka.

Demand for this unique vodka has grown over 80% over the past year without any express marketing efforts. It has a smooth clean taste without the raw burn that occurs with drinking many other vodka's.

L&A Social Media has worked with both large and small companies in the liquor business and has increased market exposure of such brands as Taittinger Champagne, Drambuie, Reyka Vodka and Russian Standard Vodka. They have worked worldwide in creating value for their clients.

On Jan. 18, 2017 the company announced it has engaged Portland, Oregon based Sandstrom Partners, Inc. to enhance Eastside Distilling's brand identity.

Sandstrom's client list includes over 150 clients over a broad spectrum of industries, including distilled spirits. Companies that have used Sandstrom include Diago Plc, Brown Forman, InBev, Seagrams and St-Germain. Products include Vodka, Gin, Bourbon, American Whiskey and liqueurs. In a way Sandstrom acts as the marketing arm for distinct products within a company's product line. They will be involved in package design, brand development, advertizing, product and brand awareness, digital awareness (including web design) and point of sale development.

This is a key move for Eastside. It does not have the capital for in-house major marketing campaigns but it needs this to move from a regional to an international factor in the growing craft distilleries sector.

Eastside Distilling announced on Jan. 09, 2017 that it had completed three transactions on Dec. 30, 2016 that resulted in an increase in net working capital of close to \$2.75 million.

The company closed a private placement of \$1.04 million gross that consisted of 800,000 shares of stock at \$1.30 plus, for each share, a three year warrant to purchase stock at \$2.50 a share (presplit the 1:3 reverse). This transaction generated \$1.04 million gross and there were no underwriters, placement agent or selling agents. This stock will be registered asap.

Five accredited investors converted outstanding warrants for 428,846 shares of stock at a price of \$1.30, reduced from a strike price of \$2.00 a share. This generated \$0.557 million in cash.

The reduction in price was an inducement by the company and was available for short period of time.

Likewise, ten accredited investor received 886,538 shares of stock in exchange for \$1.152 million of promissory notes issued in 2016. This transaction was also at \$1.30 a share.

The net impact of the three transactions was an increase in cash of \$1.597 and a reduction of \$1.152 million in notes payable. We have adjusted our future earnings estimates to reflect the new shares which, under current accounting rules, will result in a decline in net loss per share in 2017.

The company has announced that its bourbon portfolio and its Potato Vodka have received clearance from the Chinese government for sale in China after two years of testing and review. China is a significant market for American distilled spirits, growing from \$11 billion in 2013 to \$15 billion in 2015, within an overall spirits market estimated at close to \$145 billion in 2016. A significant part of the Chinese market are sales in whisky bars and tasting clubs. Local tastes tend towards high end brands which works to ESDI's strengths. Distribution is similar to the US model, through distributors, but with experts in importing spirits. We assume that Eastside Distilling is negotiating with Chinese importers. Prices should be in line with prices to US distributors.

Eastside Distilling announced its third quarter results after the close of the market on November 14, 2014 followed by a conference call.

Case sales beat our numbers as did the revenue per case. Third quarter prices usually move up sequentially but we had assumed that they would be flat as sales through distributors outside of Oregon expanded.

Wholesale sales in Oregon grew 61% but fewer retail outlets (the numbers vary based on seasonal factors) caused overall sales in Oregon to grow by only 19%. As we move into the holiday period (Thanksgiving through New Year) special events, increased number of outlets and seasonal varieties of spirits will drive Oregon retail sales back up and also influence sales in other states.

Gross margins were impacted by increased raw material costs. Eastside purchases its raw materials from a few local suppliers and the company is increasing its sourcing to provide a more stable pricing environment. It does not use grain futures as do many large alcoholic beverage manufacturers.

We have increased our estimates of case prices slightly. We expect solid seasonal growth in the 4Q16 with an improvement in gross margins from 3Q16 levels.

The company has filed a 8K stating that the senior executives have reduced their salaries and that Jay Harkins has left.

Eastside Distilling has shipped its first Canadian order to the Ontario Liquor Control Board. It shipped its award winning four year old barrel aged Burnside Bourbon. This is a point of entry for the company to introduce other brands into the largest market in Canada.

With the expiration of the 20 day period the stock symbol has returned to ESDI. The previously announced reverse split took effect on Oct. 18, 2016. The stock traded under the symbol ESDID for 20 trading days.

We have adjusted our data for the new share count on both a historical basis and looking forward.

Recent data from the American Craft Spirits Association (ACSA), International Wine and Spirits Research and Park Street, as presented at the Craft Spirits Economic Briefing in New York NY, confirm the rapid growth of the craft spirits industry.

As of Aug. 2016 there were 1,315 active craft distillers in the United States. Over the last five years craft spirits have grown at a compound rate of 27.4% in volume and 27.9% in value to a market share of 2.2% in volume and 3.0% in value.

After over 40 years of almost unparalleled growth the craft beer market is showing signs of weakness. On Oct. 14, 2016 Stone Brewing, one of the largest craft brewers in the country, announced it was laying off about 5% of its workforce.

Given that the craft distilled spirits industry is still in its infancy we could still be looking at increasing penetration of the overall spirits market for the next 20 years.

At the prestigious 2016 New York Wine and Spirits Competition Eastside Distilling won the double gold medal for its Burnside Oregon Oaked Bourbon (bottled at 48% ABV) and a silver medal for its Barrel Hitch Oregon Oak American Whiskey. This competition is regarded as one of the top three wine and spirits competitions in the U.S.A..

Both distilled spirits are aged, up to 120 days, longer than the spirits they are derived from using charred (carbonized) barrels made from Oregon Oak which imparts distinctive flavors to the spirits and, in our opinion, tends to smooth out the taste.

These wins add to the many other awards that Eastside Distilling have won and are valuable for their impact on sales and marketing.

On Sept. 30, 2016 the company announced it had received an initial order from a distributor (not specified and not listed on the company's website) in Florida that includes the Burnside Bourbon, Barrel Hitch American Whiskey and the premium Burnside Oregon Oaked Bourbon. Florida is the second largest state after California for the consumption of distilled spirits, and may be number one on a per capita basis.

Eastside Distilling has issued \$0.9 million principal amount of 8% per annum notes and warrants to accredited investors. The maturity date is Sept. 19, 2018. Included with the notes were warrants to purchase 9 million shares at an exercise price of \$0.10 a share exercisable for three years. The warrants will not be registered under the appropriate securities acts.

The company's Master Distiller Melissa Heim stated during an interview on a local news station on Sept. 12, 2016 that the company had recently shipped its largest order ever, 24,000 bottles, to a distributor on the East Coast. The average selling price per bottle to Eastside should exceed \$10 (it was \$12.45 in the second quarter).

On Aug. 15, 2016 Eastside announced its second quarter results, followed by a conference call.

Case sales increased 72% Y/Y to 3,374 cases which was an increase of 7% from 1Q16 shipments. On a dollar basis net sales in Oregon were relatively flat Y/Y, and most of the gain was from sales to distributors in other states. Oregon is the only state that has both retail and wholesale sales. Overall the change in sales mix resulted in a drop in average price per case from \$157 to \$149. We expect the average price per case to continue to decline and then level out as sales outside of Oregon become a greater part of the mix.

Eastside is now set up to sell into 24 states in the U.S.A. and also into Ontario, Canada. The company wants to focus on large cities where spirit sales per capita are often much higher than in Oregon. Distribution into California started in 2Q16. California is the nation's largest consuming state for spirit sales with sales exceeding 25.7 million cases, which is 12% of total U.S. spirit sales.

Profit margins on net sales (gross sales less excise taxes) were 47% in 2Q16 as compared to 48% in 2Q15 and 45% in 1Q16. Holding gross profit margins at this level is a significant achievement given the substantial change in geographical mix.

SG&A continued to increase from both year ago and 1Q16 levels. Some of the increase in EBITDA loss was due to increases in depreciation, which will continue at this level, but debt financing and debt payment had a significant impact.

Cash, trade receivables and inventories were \$2.06 million at the end of 2Q16 as compared to \$0.97 million at year end 2015.

In March 2016 the company announced that Burnside Bourbon was approved for sale in Ontario, Canada. We assume, although it was not specified, that sales will be through the Liquor Control Board of Ontario [LCBO]. The LCBO is also the only supplier of alcohol to bars and restaurants in the province. Ontario is the most populous province in Canada.

---

## KEY POINTS

- In the four quarters ending in the first quarter of 2015 the company sold 7420 cases of spirits and generated \$1.23 million in net sales at an average price (ASP) of \$166 per case. We assume that this is essentially all derived from sales in Oregon. If the new mix of sales to distributors drops the ASP to \$140 a case and 20 states could generate 20 times the number of cases sold in Oregon then, under these naïve assumptions, the company could generate over \$10 million in net sales and, with the current cost structure, would derive more than \$1 million in net income.
- Eastside Distilling has the capacity to move out of the craft segment and develop a nationwide presence. This would be through strong relationships with large distributors both in the United States and abroad.
- The company has a new 41,000 square foot distillery which will be capable of producing one million cases of spirits, up from 100,000 cases at the end of 2015. When sales expand beyond the capacity of the current distillery Eastside can migrate production to the new facility with only a modest increase in expenses.
- The current product line can be extended with seasonal offerings and enhanced versions of its current products as well as new craft distilled spirits such as gin. This could increase the average price per bottle over time. The target market are the Premium and High End Premium categories as defined by the Distilled Spirits Council (DISCUS).
- There is a significant seasonality in the industry. Eastside currently has approximately 20% of the annual revenue in each of the first three quarters and 40% in Q4. Selling product through distributors is likely to move sales from Q4 into Q3.

- Recent quarters included over \$1 million of SG&A expenses. Even though there were non-recurring items (not itemized), the overhead burden has to be reduced to achieve bottom line profitability over the next few years.

Eastside Distilling was founded in 2008 and, via a reverse merger, became public in 2014. Located in Portland's Distillery Row the company produces a number of craft spirits such as whiskeys, vodka and rums.

The company introduced its first product, Below Deck Rum in 2009 and opened its first distillery with 6,400 case capacity. Its first vodka was sold in 2010 and the product line expanded to include another rum and its first bourbon, Burnside, as well as its first seasonal liquor, Holiday Spiced.

Eastside Distilling entered the retail market, in Oregon, in 2014. Starting in 2015 the company launched several initiatives with distributors and was approved to sell spirits in five more states including New York and Texas.

Eastside Distilling has constructed a 41,000 sq. ft. distillery and tasting room designed to increase capacity to one million cases, a 150 fold increase.

There are substantial variations in prices for the same product across many markets. In Southern California the retail price for a bottle of Burnside Bourbon 4 Year on sale is currently \$26.99 for a 750 ml bottle, its regular price is \$34.99; Oregon Oaked Burnside is \$54.99; Barrel Hitch American Whiskey sells for \$19.99. Below Deck Silver Rum for \$17.99 and Ginger Rum for \$17.99; The Premium Vodka goes for \$19.99. The rum and the vodka prices are close to the regular prices for well known premier brands.

## OVERVIEW

The wine and spirits industry is a major contributor to the US economy. In 2014 it paid \$6.45 billion in excise taxes (this does not include custom duties paid on imported wine and spirits), \$15.9 billion in business related taxes and \$34.2 billion to state and local taxes. It supports more than 57,000 direct manufacturing jobs.

The Dept. of the Treasury, Alcohol and Tobacco Tax and Trade Bureau publishes monthly data on net production of spirits and the amounts bottled for domestic use. The data contains inconsistencies but the overall trends are important. The TTB data is released about four months after the end of the month.

US Dept. of the Treasury	2003	2004	2005	2012	2013	2014	2015	2015	2016
<b>Net annual production in billion proof gallons, data as reported in December.</b>								6 months	6 months
Whiskey	71.941	83.114	92.89	112.616	211.319	141.433	146.912	73.981	89.683
Rum, Gin & Vodka	11.717	38.492	10.366	18.876	5.845	6.151	11.182	3.097	2.901

Tequila	14.941	15.012	14.358	16.023	14.807	16.441	15.690	8.055
Units are not important, the % of market and the sector growth are what counts								

In 2014 the alcoholic beverage market in the US was about \$65.8 Billion according to the Distilled Spirits Council of the United States (DISCUS). Other sources place the total U.S. market at 7.7 billion gallons and retail sales at \$212 billion, with spirits at 507 million gallons and \$78 billion.

However, this data includes beer, spirits and wine, and this is not the relevant market for Eastside Distilling, Inc. A more relevant market is the spirits section, which accounts for 35.2% of the total. Preliminary estimates for 2015 are for an increase in revenue of 4.1% to \$24.1 billion on a volume of 215,034 thousand cases (price per case of \$112.09, an increase from the \$110.11 of 2014).

Distilled Spirits Council of the United States								
Year	2000	2005	2010	2011	2012	2013	2014	2015
Distilled spirits								
Revenue in billions	\$11.70	\$16.00	\$19.16	\$20.36	\$21.29	\$22.22	\$23.15	\$24.09
As%of total market:	28.73%	32.05%	33.28%	34.05%	34.26%	34.70%	35.17%	35.44%

Over the 16 years from 1999 to 2014, except for 2009, the market share for spirits has increased from the prior year level, and beer has been the loser. But, again these statistic are not germane. What counts is the markets in which Eastside is involved or those that would be potential markets in the future.

Again, DISCUS has the relevant data for 2014 and 2015, broken down by category and price range.

The overall categories are shown below. The obvious target markets for Eastside Distilling are the whisky markets, both blended and bourbon.

Category	2013			2014		2015			2015		
	cases	cases	% change	Revenue*	Price per	cases	% change	Revenue*	Price per	% change

<u>Survey by Zacks</u>				

The classification is based on the names of the spirits mentioned in the DISCUS Annual Industry Review 2015.

It is obvious that the place to be for a craft distiller is the high end premium and super premium markets. According to DISCUS the growth over the last five years has been highest for the super premium whiskey market (155% in gross revenue and 141% in volume) followed by the high end whiskey market (50% in gross revenue and 34% in volume). Vodka is the largest market, but it has a low growth rate and the lowest price points.

The overall growth of the whiskey market over the last 13 years is shown below, which shows the increase in cases (9 litres or twelve 750ml bottles). The high-end product has the strongest pricing over the period 2010 to 2015.

## Wholesalers & Distributors.

In the U.S. all liquor producers have to use state licensed or state owned agencies as distributors. Over time this industry has consolidated into four major companies that generate nearly 60% of the revenue from wine and spirits. Number six, at that time, Wirtz Beverage and number three Charmer Sunbelt united together on 10/20/2015 to become Breakthru Beverages, the third largest distributor. The consolidation of Southern Wine and Glazer's on June 30, 2016 resulted in Southern Glazer's Wine and Spirits becoming by far the largest distributor, being twice the size of number two.

The number of distributors varies in each state with California having the most distributors. However, cases per distributor, and presumably revenue per distributor, are highest in Texas and Florida.

Producers negotiate with distributors within each state (See ESDI web site) and the company has a relationship at the corporate level with some of the major distributors.

Eastside Distilling currently lists on its web site 21 states in which they sell to distributors These include Southern Wine and Spirits (now Southern Glazer's, by far the largest distributor) in 8 states including California, Illinois, New York, and Texas (Glazer's is now Southern Glazer's). This is four out of the top five spirit consuming states. Eastside has announced it is now selling product in Florida which gives it a presence in the top five states.

## INDUSTRY POSITION

EAST believes it has one of the broadest range of products of any craft spirits company. With its recent expansion Eastern Distilling will be one of the larger craft distilleries. Its broad spectrum of craft spirits sets it apart from much of its competition, and it has marketing agreements with several of the largest distributors, including Southern Glazer's.

According to the trade press [[www.thewhiskeywash.com](http://www.thewhiskeywash.com)] in April 2016 there were at least a thousand craft distilleries in operation and the number of Distilled Spirits Permits (DSP, the federal permit required to operate a distillery) has risen to 1,825. In 2015 there were close to 400 DSPs issued. The industry has grown from 18 distilleries in 1977, 60 in 2003, 289 in 2010, 760 by the end of 2015 with another 200 under construction. A craft distillery is defined as one that produces less than 100,000 9-liter cases {133,333 750 ml bottles} a year. The ADI (American Distilling Institute) estimates that more than 95% make less than 50,000 cases a year. However, given the strength of the market, many of these are adding capacity. The ADI estimates the current growth rate to be around 30% a year and should result in an 8% market share of all spirit sales within four years. Other sources place the volume growth (cases) at 45% per year. Whiskey represents 37% of all craft labels, followed by gin at 13%. The American Craft Spirits Association is of the opinion that craft distilling is on a steeper growth curve than craft beer was in the 1980s.

Since all spirits are sold through third parties (distributors or state controlled entities), the opinions, and actions, of the distributors are very important. The CEO of Southern Glazer's has stated that craft spirits is a key trend for the future and would definitely be a growth driver for Southern Glazer's.

---

## CRAFT MARKETS & THE SEARCH FOR DIFFERENTIATION

Companies have always tried to differentiate themselves and their products from their competitors. Billions of dollars are spent on brand identities even though there may be no functional difference between products from one company or generic products from large competitors. Marketing departments spend a lot of time trying to segment markets and position themselves and their products in some way to sell goods and services at higher prices.

Segmentation is one type of differentiation. Other ways are perceived quality, flavor or taste. Adding flavor enhancers to foods, olfactory agents to detergents, prettier bottles, colored liquids are all means to appeal to buyers.

One of the first major craft companies to segment its market is Starbucks, the ninth largest beverage company in the world. It was the first coffee producer that sold coffee of different grinds, coffee beans from many parts of the world, and the shops made coffee in machines not found at the usual diner. Starbucks still differentiates its products in more ways than does its competition. The competition was Howard Johnson, and they no longer exist.

The first craft market for distilled spirits was probably the liqueur market, differentiated by flavor over two hundred years ago. Drambuie in 1746; Cointreau in 1888; Metaxa in 1849 and (disputed) Benedictine in 1510 (Source: Wikipedia). These were all small craft distillers based on today's definition.

In more modern times what was probably the first differentiation in the spirits business was the extension of the single malt scotch whisky market. For many years there were only two, Glenfiddich (formed in 1888) and Glenlivet (formed in 1824) and both were 12 year old malts. In the 1990s Glenfiddich introduced extended life single malts, first a 15 year old and then an 18 year old malt. Product extension is differentiation.

Then other single malts appeared using different methods of malting. The water from the local streams is flavored by the peat bogs (peat is sphagnum moss) imparting a local taste.

Beer is not just beer. There is pale ale, lager, stout, mild, lambic, hefeweizer (wheat beer). There is IPA, Imperial Pale Ale, the British standard for beer to be produced for the Indian Army. Guinness made in Dublin (opened in 1778) does not taste the same as that made elsewhere. There are the German standards where the ingredients are tightly controlled, which was the base for the Milwaukee beer industry. All of these beers have different tastes and alcohol contents. There is near beer which has a low alcohol content and malt liquor which is stronger. There are seasonal varieties, and there are craft beers. These, by definition of the Brewers Association, are "small, independent and traditional".

Microbrewing is assumed to have started in the UK in the 1970s, although there have been many artisan brewers in Europe for centuries. The concept spread to other countries and some breweries expanded their capacity and distribution, and the term craft brewing was used to segment the beer market and to differentiate such beers from those produced by the large brewers such as Stella Artois, whose roots go back to the original brewery established in 1366. From this came the small brewery in restaurants and the ultimate in "micro", the brewpub.

Microbreweries compete on the basis of quality, taste and innovation and not on price.

In 1979 President Carter signed a bill to deregulate brewing at the federal level allowing homeowners to brew beer, and some of these expanded to become craft breweries.

In 1979 there were 89 breweries in the U.S. The Brewers Association reported that in March 2013 there were 2,416 breweries in operation, of which 97.7% were ranked as craft breweries. There were also 1,124 brewpubs and over 1,200 other small breweries. By 2015 this had reached 4,225 craft breweries.

However, for the first time, new net openings (openings less closings) declined; from about 600 in 2014 to less than 400 in 2015. It may be that the craft beer market has peaked.

By 2015 the craft beer market had reached \$22.3 billion in sales with a market penetration of 12.8%.

Within the "craft" category there are a number of companies that are no longer small. D.G. Yuengling and Son. (established in 1826) had revenue of \$1,758 million in 2015 and is the fourth largest brewer in the U.S. and 34th largest beverage company in the world. The Boston Beer Co. (Samuel Adams, often shortened to Sam) is number 44 on the world list and number 5 in the U.S. with revenue of \$960 million in 2015.

The craft brewing industry has shown that "craft" is no impediment to growth and size. It is likely that over the same period (1984 to 2015 for the Boston Beer Co.) some of the craft spirits companies can become as successful as the craft beer companies. Penetration of 10% of the U.S. spirits market would be over \$2 billion.

---

## VALUATION

There are no U.S. companies in the 15 largest alcoholic beverage producing companies in the world. Even in just the spirits group Brown-Forman Corp. [BF-B \$ 46.55] is number 6 in the world and Constellation Brands [STZ \$168.60] is number 8. The large cap stock valuations are not really relevant as comparisons for the emerging craft distillers. There are many small craft distillers listed on stock exchanges. There are over 20 companies listed on stock exchanges world-wide with the word "distilleries" in their name. Unfortunately, a lot of them are listed on the Bombay Stock Exchange and data on them is not available. Also there are some micro-cap companies in the wine industry which have been added for the basis of comparison.

Analyst estimates of next 5 year growth in earnings per share for beverage stocks vary from 25% for BREW, 20% for THST and down to 7% for DEO (Diageo.plc). In our opinion EAST could grow at over 35% compounded over the next five years and the stock deserves a premium valuation to the group.

Given its growth and expanded opportunities in the U.S. and in Canada we feel that a target price of \$8.00 a share is reasonable. Our prior price was based on a market cap. of \$30 million plus cash and increased inventory valuation.

## RISKS

- Bourbon production, which is a significant portion of Eastside's output, is capital intensive, since all bourbons have to mature in oak casks. Current cash flow is not sufficient to sustain the current level of operations in 2016, and new capital will be needed. This may cause significant equity dilution to current stockholders. Without new capital the company may have to scale back its operations or even cease to exist.
- The distilled spirits industry is subject to and has to comply with a myriad of jurisdictions laws and regulations at both the Federal and State level. These regulate the production, blending, bottling, labeling, marketing, sales and distribution, advertizing, type of media, transportation and doing business at all levels. Regulations vary from state to state. Companies are required to do business in the U.S. only with holders of licenses to import,

warehouse, transport, distribute and sell spirits. These regulations may inhibit the ability of a small company to do business at a profitable level. Complying with the appropriate regulations is an added cost that could be burdensome to a small liquor producer.

- Consumer preferences in liquor differ in different parts of the US. Eastside Distilling's products may not be acceptable in certain large markets, and the company will have to build brand recognition, which will limit growth.
- As an emerging growth company under current government regulations Eastside may issue reduced financial disclosure, which will significantly reduce the ability of financial professionals to estimate the future course of the company.
- The company has no long term contracts with suppliers for raw materials, many of which are agricultural products that are subject to large fluctuations in price and supply. Eastside may not be able to increase its product prices to cover any increased costs.
- Certain states are control states where the state acts as the sole distributor of alcoholic beverages, and they may only be purchased from state owned or state controlled points of sale. These states decide which products may be sold in that state. Eastside is currently authorized to distribute product in five of the seventeen control states. The loss of any of these states, especially Oregon, could have a significant impact on revenue and profitability. A large control state that ESDI does not currently sell to is Michigan.
- The loss of use of the distilling facility from a disaster such as a fire would have a catastrophic impact on the company.

---

## **INSIDER TRADING AND OWNERSHIP**

Officers and directors, are collectively the beneficial owners of approximately 58% of the outstanding shares of the common stock and have voting power of approximately 52% of all votes on matters to be presented to stockholders as of April 12, 2016.

On Jan.9, 2017 the company added 2.115 million shares through various transactions thereby reducing the ownership of the officers and directors to about 40%.

1.38 million units equal to one share plus one warrant were sold in August, 2017.

# HISTORICAL STOCK PRICE ADJUSTED FOR STOCK REVERSE SPLITS

## DISCLOSURES

The following disclosures relate to relationships between Zacks Small-Cap Research (“Zacks SCR”), a division of Zacks Investment Research (“ZIR”), and the issuers covered by the Zacks SCR Analysts in the Small-Cap Universe.

### ANALYST DISCLOSURES

I, Ian Gilson, hereby certify that the view expressed in this research report accurately reflect my personal views about the subject securities and issuers. I also certify that no part of my compensation was, is, or will be, directly or indirectly, related to the recommendations or views expressed in this research report. I believe the information used for the creation of this report has been obtained from sources I considered to be reliable, but I can neither guarantee nor represent the completeness or accuracy of the information herewith. Such information and the opinions expressed are subject to change without notice.

### INVESTMENT BANKING AND FEES FOR SERVICES

Zacks SCR does not provide investment banking services nor has it received compensation for investment banking services from the issuers of the securities covered in this report or article.

Zacks SCR has received compensation from the issuer directly or from an investor relations consulting firm engaged by the issuer for providing non-investment banking services to this issuer and expects to receive additional compensation for such non-investment banking services provided to this issuer. The non-investment banking services provided to the issuer includes the preparation of this report, investor relations services, investment software, financial database analysis, organization of non-deal road shows, and attendance fees for conferences sponsored or co-sponsored by Zacks SCR. The fees for these services vary on a per-client basis and are subject to the number and types of services contracted. Fees typically range between ten thousand and fifty thousand dollars per annum. Details of fees paid by this issuer are available upon request.

### POLICY DISCLOSURES

This report provides an objective valuation of the issuer today and expected valuations of the issuer at various future dates based on applying standard investment valuation methodologies to the revenue and EPS forecasts made by the SCR Analyst of the issuer’s business. SCR Analysts are restricted from holding or trading securities in the issuers that they cover. ZIR and Zacks SCR do not make a market in any security followed by SCR nor do they act as dealers in these securities. Each Zacks SCR Analyst has full discretion over the valuation of the issuer included in this report based on his or her own due diligence. SCR Analysts are paid based on the number of companies they cover. SCR Analyst compensation is not, was not, nor will be, directly or indirectly, related to the specific valuations or views expressed in any report or article.

### ADDITIONAL INFORMATION

Additional information is available upon request. Zacks SCR reports and articles are based on data obtained from sources that it believes to be reliable, but are not guaranteed to be accurate nor do they purport to be complete. Because of individual financial or investment objectives and/or financial circumstances, this report or article should not be construed as advice designed to meet the particular investment needs of any investor. Investing involves risk. Any opinions expressed by Zacks SCR Analysts are subject to change without notice. Reports or articles or tweets are not to be construed as an offer or solicitation of an offer to buy or sell the securities herein mentioned.
