Environmental Policy

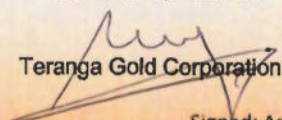

Sabodala Gold Operations (SGO), a subsidiary of Teranga Gold Corporation, is a gold mining and processing operation in Sabodala, at the Kedougou region in Senegal. SGO is committed to protecting the environment whilst contributing to the economic development of Senegal.

SGO Management believe that all employees, the community in which we operate and other stakeholders have a right to expect a responsible and environmentally sustainable performance from us.

To meet this expectation, SGO will:

- Comply with, and where possible exceed the requirements of relevant legislation, regulations, other legal obligations and corporate's Environment Performance Standards for which we are accountable.
- Develop, implement and continually improve environmental management systems to ensure that environmental processes are integrated into all business units within the organization.
- Identify environmental impacts in all business planning exercises and take appropriate action to address the associated business risks.
- Promote environmental awareness of all employees and contractors to increase their understanding of their own environmental management responsibilities.
- Make sufficient resources available to meet our environmental objectives.
- Put effective controls in place to prevent the pollution of groundwater, surface waters, soil and air and to minimize adverse impacts on biodiversity.
- Implement effective systems to address the risks of transporting, storing, handling and disposal of hazardous materials.
- Ensure effective waste management is possible through established Reduction, Re-use, Recycling and correct waste disposal strategies.
- Maintain a high degree of emergency preparedness to effectively respond and recover from any environmental incident.
- Introduce initiatives to reduce water and power usage on site in order to preserve natural resources, minimize our greenhouse gas emissions, and tackle climate change.
- Reclaim our mining sites to ensure physical and chemical stability, in consultation with stakeholders and, where possible, with a focus on gradual rehabilitation.
- Monitor environmental performance through audits, workplace inspections and environmental samples analysis to identify opportunities for continual improvement.
