LE80

Officer Initials ______

2 - SUMMARY:

- 2 On October 8, 2017, at approximately 9:09 PM, The CAL FIRE Oroville Emergency
- 3 Command Center (ECC) received a 911 report of a vegetation fire near 3401 Cherokee
- 4 Road, in State Responsibility Area (SRA), in the community of Cherokee, in a rural
- 5 area of Butte County, CA. The Oroville ECC dispatched a full wildland fire response.

6

- 7 The fire was named the Cherokee Fire and it became an extended attack fire and
- 8 burned a total of 8,417 Acres and six residential structures.

9

- 10 The Cherokee Fire was determined to have been caused by multiple tree branch
- failures on a live oak tree. The broken tree branches contacted energized powerlines,
- which failed, and subsequently ignited the natural vegetation on the ground on fire.

E-2 (1) Coil of conductor line that was collected at scene from western most power pole (Approximately 8' long).

1 6 - CONDITIONS:

- 2 October 8, 2017 was a warm, dry evening with a wind event occurring throughout the
- 3 region. There was no recent precipitation and the skies were clear, with unrestricted
- 4 visibility. Road conditions were dry.

5

- 6 Fuels:
- 7 3401 Cherokee Road consists of mainly rolling hills with oak woodland and a moderate
- 8 brush component in the understory.

9

- 10 Weather:
- 11 The Openshaw Remote Automated Weather Station (RAWS) @ 9:00 PM on October 8,
- 12 2017 recorded the following readings: Temp: 71°F, RH: 9%, Winds: 3 MPH N, Gusts to
- 13 22 MPH.

14

- 15 The Openshaw RAWS is located approximately 5.7 miles away from the Cherokee Fire
- origin area, west-southwest straight line distance.

17

- 18 Peak wind gusts from the wind event were recorded at the Openshaw RAWS October
- 19 8, 2017 at 29 MPH and were recorded at that speed on several hour intervals, but
- 20 mainly through the periods of 9:00 AM to 11:00 PM.

21

- 22 Topography:
- 23 This area of Cherokee rises gradually and then plateaus off to form the top of Table
- 24 Mountain. The southern and eastern outer edges of Table Mountain have steep bluffs
- 25 that transition to rolling hills and continue down to the valley floor.

26

27

28

7 - VEHICLES:

No vehicles associated.

LE80

Officer Initials ______

8	_	P	R	O	P	E	R	T	Y	•

- 2 3401 Cherokee Road is a single family rural residential parcel, approximately 25.34
- 3 Acres and located within SRA. The predominant fuel model is oak woodlands with
- 4 rolling hills. Access to the property was along a single winding driveway, which was
- 5 gated closed along Cherokee Road at the time of the fire discovery.

LE80

Officer Initials _ MW

9 - NARRATIVE:

- 2 On October 8, 2017, at approximately 9:09 PM, The CAL FIRE Oroville Emergency
- 3 Command Center (ECC) received a 911 report of a vegetation fire near 3401 Cherokee
- 4 Road, in State Responsibility Area (SRA), in the community of Cherokee, in a rural
- 5 area of Butte County, CA. The Oroville ECC dispatched a full wildland fire response.

6

1

- 7 Fire Captain Chip FOWLER was dispatched as a Fire Investigator but was reassigned
- 8 as a Division Group Supervisor due to an immediate need and the fast-moving
- 9 vegetation fire. I, Peace Office Mike WATERS, responded to the incident as a Fire
- 10 Investigator on October 9, 2017.

11

- 12 I arrived at scene, in uniform and in a marked departmental vehicle, at approximately
- 13 12:00 PM and met with FOWLER. FOWLER told me the fire was reported by the
- residents at 3401 Cherokee Road and it was down a long driveway, approximately ½
- mile long. FOWLER also told me he had initially responded to the area of the origin
- and observed a set of powerlines that were down, but he was unable to get close to the
- origin because the downed powerlines were still energized. FOWLER told me he was
- then reassigned and he left the area of origin.

19

- 20 I began my origin and cause investigation by driving to the reported location. I met with
- 21 an engine crew that had been in the area since their initial response to the fire, the
- 22 night prior. Firefighter Jerry STEPHENS advised me the downed powerlines were
- 23 about 200 feet in front of their engine. I walked to the location and I observed a large
- 24 live oak tree, that had two top branches broken off and the branches were lying in a
- burned area of vegetation to the north west of the tree and approximately twenty feet
- 26 away. The oak tree was located along the base of a pronounced topographic feature
- that went uphill to the south west. I observed one conductor line was missing between
- 28 the two power poles on either side of the tree with the broken branches. I identified

one conductor line, on the same span as the missing conductor line, that was draped down low and intermingled with smaller branches of the tree with the broken branches directly on the south side of the tree and running to the east. The lowest burned area of vegetation was at the base of the hill.

3

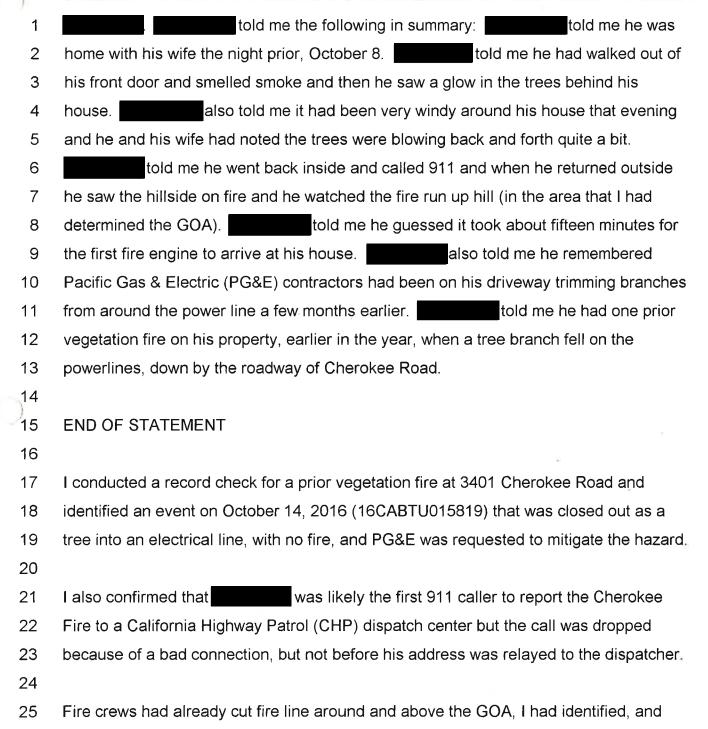

4

I looked at the macro and micro fire spread indicators, including: protection, sooting, staining, angle of char, white ash deposits, and grass stem fall. I walked around the unburned lower side of the fire's edge and to the north west. I then walked uphill, following the fire's edge and to the south west. Approximately fifty feet uphill. I crossed into the fire perimeter and back to the south east. I observed initially lateral fire indicators of protection and lower intensity burning then transitioned into advancing indicators of protection, angle of char, and white ash. I continued southeast until I observed lateral indicators again and determined that the primary advancing vector of the fire was uphill to the southwest. I continued downhill and then back to the north west and did a zig zag movement through the burned area as my area of advancing fire indicators grew smaller as I got near the base of the hill. I observed a barbed wire fence with intermittent metal posts, and trees used to secure the barbed wire, that ran in a general east west direction. I determined the base of the slope was the General Origin Area (GOA) and the GOA was an area approximately nine feet by nine feet. Within the GOA, I observe a length of conductor line that was on the ground, in the burnt vegetation, and its western end was still connected to the western most power pole. The same power pole was the terminus for the Pacific Gas & Electric (PG&E) maintained power line that, based upon my training and experience, appeared to have been a 2 conductor, 12 Kv distribution line. There was a pole-mounted transformer on the same pole and from that location a service drop extended to the northwest to the residence at 3401 Cherokee Road.

2728

I walked to the residence at 3401 Cherokee Road and interviewed the resident,

26

27

28

suppression efforts and before my arrival at the incident. Most of the branches that I

observed stacked in the GOA were burned and I was unable to identify independent

they had stacked additional brush branches into the GOA, during the initial fire

burn marks that I would expect to see from an elevated branch that came into contact

2 with energized conductors. Within the GOA, I was unable to identify any items of non-

3 natural items other than an old soda can which was partially rusted and had been shot

several times, and was located on the northeastern edge of the GOA. Within the GOA,

I was unable to further identify the Specific Origin Area (SOA) due to suppression

6 efforts prior to my arrival.

7

9

10

11

4

5

8 I spoke with PG&E lineman which who he told me that he had cut and

collected the overhead conductor lines, at the location I determined to be the GOA, the

night prior. I asked if I could examine the collected lines and he told me he

had already given them to his supervisor and they were no longer in his possession.

12 attempted to retrieve the last section of downed conductor line, which was still

13 draped near the west side of the GOA, and I advised him I would be securing the

14 conductor line myself as evidence and he left it on the ground after coiling it.

15

16

Fire Cause Determination

17 Inclusion:

18

19

22

Electrical Power

20 Electrical power caused fires require the presence of electrical energy such as

21 powerlines, electrical fences or generators. This equipment is readily identified at or

near the origin of the fire and if so located must be considered as a potential ignition

23 source if not eliminated.

24 Cherokee Fire:

25 A thorough examination of the GOA of the fire was conducted. Electrical conductor

lines were found broken and downed in proximity to the fire origin. Two large live oak 26

27 branches were observed to have failed and were lying in the area of the GOA. From

28 ground level, I estimated the clearance of the conductor lines from the intact branches

1 remaining to the normal location of the span of the conductors to be between five to ten 2 feet and compliant with the Public Resource Code 4293 requirement of four feet of 3 clearance. I observed burn marks on a single section of downed conductor line that did 4 not correspond to the adjacent burnt surface fuels. This indicated to me that it had 5 contacted overhead branches while it was still intact, grounded itself, and provided a 6 burning ignition source overhead. This determination is supported by witness 7 statements of seeing a glow in the trees first, before losing power and 8 discovering the hillside on fire. Electrical power is included as a factor for the Cherokee 9 Fire. 10 11 I requested a CAL FIRE Forester to examine the tree involved. Division Chief Dave 12 Derby, CAL FIRE Forester II, responded to the incident and examined the tree (See 13 Le71 Supplemental Report by Derby) and determined that the overall tree was healthy 14 and the branches involved were healthy and had no outward signs of disease or decay. 15 16 Conclusion: 17 Based upon my training and experience, I ruled out all fire cause classes except for 18 Electrical, therefore the cause of the Cherokee Fire is considered the result of multiple 19 tree branch failures, from an outwardly appearing healthy tree, that contacted 20 energized powerlines and ignited aerial fuels and then subsequently ignited the ground 21 vegetation. 22 23 Origin Location: N 39° 37.462 X W 121° 32.256 24 Elevation: 1458' Aspect: North East aspect, 25 Weather: Openshaw RAWS site @ 9:00 PM 10-8-2017

8, 2017 at 29 MPH and were recorded at several hour intervals, but mainly through the Officer Initials MW

26

27

28

Peak wind gusts from the wind event were recorded at the Openshaw RAWS October

Temp: 71°, Relative Humidity: 9%, Wind speed: 3 MPH, G to 22 MPH N

periods of 9:00 AM to 11:00 PM.

Mon.	October	13	2017	Butte	CNR	вти	

My name is David Derby and I am a Registered Professional Forester (RPF #2333). On Monday, October 9th, 2017, at the request of CAL FIRE Butte Unit Prevention Officer Mike Waters, I examined the condition of a 42' tall Oregon white oak tree located adjacent to an electrical transmission line right-of-way near the residence at 3401 Cherokee Road, Oroville, CA 95965. I observed three branches with green foliage near the base of the tree that appeared to have broken out of the tree crown within the last 24 hours. A broken high-voltage conductor line was adjacent to the tree and the ground was scorched. The diameter of the three branches at the break points ranged from 6 to 8 inches. One branch had a small hole near the break that indicated a previous minor injury that was in the process of healing over. This branch appeared to have been originally attached at a point in the crown below the other two branches. The other two branches showed no evidence of injury or decay and a test of the wood fibers with a pocket knife revealed sound wood. In general, the tree appeared to be in good health other than some dead branches in the lower crown on the side of the tree opposite from the utility line. The crown was balanced and the trunk did not have a significant lean.

I inspected the other trees along the transmission line for approximately 200' to the north. I found that there were some branches overtopping the transmission lines, but they appeared healthy. I also found evidence of pruning on these trees that I estimate was done by utility company contractors within the last three months. I observed no branches closer than 4 feet from the lines and I estimate that the clearance was closer to 6 feet at a minimum.

Subject: Electric Safety Incident Reported- PG&E Incident No: 171010-8557

The Following information regarding this incident has been reported:

Reporting Date: 10/10/2017 5:30:24 PM **Incident Date:** 10/8/2017 @ 9:45 p.m.

Reported By: Charles Filmer, Compliance specialist

Utility Name: PG&E

Phone Number: (530)902-5685 **Email Address:** CLF8@pge.com

Incident Location: 3401 Cherokee Road Oroville, Butte

Reasons For Reporting:

- Fatalities? No (Utility: , Others:)
- Names of Fatalities:
- Injuries? (Utility: , Others:)
- Names of Injured:
- Damage? Yes (Utility: , Others:)
- Interruption? (Total Customers: , Total Hours:)
- Operator Judgement? No
- Media Coverage? No

Cause of Incident: Falling Branch (Other Cause:)

Agencies on Scene: Fire,

Facilities Affected:

- Utilities Facilities: Clark Road 1102
