

Assay Lab Technician

Northern Sun Mining is currently accepting applications for the contract position of Assay Lab Technician at the Redstone Mill.

The Assay Lab Technician will assist with the following responsibilities:

- Responsible for preparing mill samples for assaying on a daily basis:
 - Crushing samples
 - Pulverizing samples
 - Roll samples for proper mixing
 - Splitting samples for in-house assays and external assays
 - Weighing mill samples for digestion
 - Digestion of mill samples using the proper procedures
 - Using a Varian AA240 Atomic Absorption unit to read the metal concentrations
- Maintain accurate records of all samples in the logbook and the computer database:
 - Millrun samples on a daily basis
 - Copper concentrate on an on-demand basis
- Responsible for the quality and accuracy of all samples analyzed
 - Assays on mill samples need to be done using the proper standards
 - QA/QC standards need to be assayed at the same time for quality purposes
- Perform other related duties as required

Qualifications:

- High school diploma, accompanied by post-secondary education in Chemical Engineering Technology or Metallurgical Engineering Technology or a combination of relevant experience;
- Basic understanding of assaying;
- Strong focus on accuracy and good analytical and problem solving skills;
- Computer skills including the ability to operate spreadsheets and word processing at a highly proficient level.
