Rounding of some figures may lead to minor discrepancies in totals. Mineral Reserves are based on C\$180/t cutoff grade, US\$ 1,100/oz Au price, US\$ 17/oz Ag price, C\$/US\$ exchange rate = 0.92. Mineral Resources are based on a cut-off grade of 5.0 grams of gold-equivalent/tonne. Mineral Resources are inclusive of Reserves. The gold equivalent value is defined as $AuEq = Au + Ag/53$.

Mineral Resources which are not Mineral Reserves do not have demonstrated economic viability. The estimate of Mineral Resources may be materially affected by environmental, permitting, legal, marketing, or other relevant issues. The Mineral Resources in this news release were estimated using the Canadian Institute of Mining, Metallurgy and Petroleum (CIM), CIM Standards on Mineral Resources and Reserves, Definitions and Guidelines prepared by the CIM Standing Committee on Reserve Definitions and adopted by CIM Council.

The quantity and grade of reported Inferred resources in this estimation are uncertain in nature and there has been insufficient exploration to define these Inferred Resources as an Indicated or Measured Mineral Resource and it is uncertain if further exploration will result in upgrading them to an Indicated or Measured Mineral Resource category.
