

SNOWFIELD DRILLING RESULTS

The following are all of the drill holes that were drilled in 2006, 2007, 2008, 2009 and 2010 in the Snowfield area by Silver Standard Resources Inc. The assay results for the holes are summarized below. Most holes were assayed in 1.5 meter intervals and these have been combined into the longer intervals as presented in the table.

Kenneth C. McNaughton, M.A.Sc., P.Eng., is the Qualified Person (QP) for Pretium Resources Inc. and is responsible for the Snowfield and Brucejack Project exploration programs and has verified and supervised the preparation of the data in the table above. All samples were submitted for preparation and analysis by ALS Chemex at its facilities in Terrace, B.C. All samples were analyzed using multi-digestion with ICP finish. Samples over 100 ppm silver were reanalyzed using four acid digestion with an ore grade AA finish. Samples over 1,000 ppm silver were fire assayed with a gravimetric finish. Samples with over 10 ppm gold were fire assayed with a gravimetric finish. One in 20 samples was blank, one in 20 was a standard sample, and differing one in 20 samples was a field duplicate one-quarter split core assayed at ALS Chemex in Vancouver, B.C.
