

Innovation in power conversion

Power Integrations

2007 Annual Report

Dear Fellow Stockholders,

2007 was an outstanding year for Power Integrations. We outperformed our peer group by a wide margin with revenue growth of 18 percent, compared to a decline of 1 percent for the analog semiconductor industry.¹ We also had an excellent year in terms of cash flow and profitability, generating \$63 million in cash flow from operations and nearly tripling our GAAP net income. Reflecting the strength of our balance sheet, with over \$200 million in cash and investments and no debt, our board of directors has authorized the use of \$50 million for the repurchase of stock, beginning in February 2008.

As proud as we are of our financial performance, we are equally proud of the positive impact our products are having on the environment. We estimate that our *EcoSmart*[®] technology saved six billion kilowatt-hours of electricity in 2007. If generated by coal-burning power plants, this amount of power would have resulted in four million tons of CO₂ emissions—roughly equivalent to the annual emissions of 670,000 automobiles. In total, we estimate that our technology has saved more than \$2.8 billion worth of power since 1998.

Our technology is making a real difference today, without adding to the cost of consumer products, without expensive investments in infrastructure, and without requiring any change in consumer behavior. Indeed, while the term “clean technology” often refers to alternative energy sources, I believe that energy-efficiency is actually the most readily available, most cost-effective way to reduce carbon emissions in the near term, and represents a great way for investors to participate in the “clean-tech” revolution. In recognition of this fact, Power Integrations has recently been added to clean-tech stock indices sponsored by both NASDAQ and the American Stock Exchange.

As the world looks for solutions to its energy-related problems, our energy-efficiency capabilities are increasingly becoming a growth driver for our business. Until recently, energy efficiency has primarily been a “nice-to-have” feature for most electronic products. Now, however, efficiency has become an essential design criterion for many electronic products, thanks to growing consumer awareness as well as the emergence of stringent new energy-efficiency standards on electronic products.

For example, last year California adopted tight, mandatory efficiency standards on virtually all external power supplies—the AC adapters and chargers supplied with all kinds of everyday electronic products. On July 1, 2008, these standards are not only scheduled to become tighter, but also to take effect nationwide in the U.S. as a result of the Energy Independence and Security Act of 2007 (EISA), which was signed into law by President Bush in December. Similar mandatory standards are currently under development by the European Commission, while ENERGY STAR[®] and the EU Code of Conduct are in the process of tightening their voluntary specifications.

These standards are clearly having an impact on the power supply market. Linear transformers—the notoriously inefficient copper-and-iron bricks often called “energy vampires”—are now rapidly being replaced by electronic power supplies. In fact, revenues from our *LinkSwitch*[®] chips, which are specifically designed to replace linear transformers, grew 150 percent last year, and more than quadrupled on a year-over-year basis in the fourth quarter. With hundreds of millions of linear transformers still being produced every year, this remains a significant growth opportunity for us in the years ahead.

Lighting is another promising source of potential energy savings. Less than five percent of the energy consumed by traditional incandescent light bulbs is converted to light; the remainder is wasted as heat. Last year’s EISA law requires substantial improvements in lighting efficiency in the U.S. beginning in 2012, while Australia, Canada and Europe have all announced plans to phase out incandescent light bulbs over the next several years.

Light-emitting diodes (LEDs) are an increasingly attractive alternative to incandescent lamps due to their energy efficiency and long life. And unlike most compact fluorescent lamps, LEDs are small, they emit light that is pleasing to the eye, and they don't contain toxic mercury. Our chips are extremely well suited for powering LEDs, which operate on low-voltage DC power just like other electronic products. We earned approximately \$1.5 million in revenues from LED applications in 2007, and we are working hard to grow this revenue stream as LEDs become a mainstream lighting technology in the years ahead.

Since introducing our revolutionary *TOPSwitch*[®] chips 14 years ago, we have led the way in bringing the benefits of integrated circuits to the power supply industry. Yet we estimate that only about 15 percent of our current addressable market has adopted highly integrated solutions like ours. With the remainder still using outdated technologies such as discrete components and linear transformers, we still have ample room for growth. Nevertheless, our current product portfolio effectively addresses only about 70 percent of the AC-DC power supply market; the remaining 30 percent requires higher levels of power than we can deliver cost-effectively with today's products.

That's about to change. In December, we acquired Potentia Semiconductor, an early-stage company based in Ottawa, Canada. The acquisition brings us an experienced team of IC designers and power supply engineers with extensive knowledge of high-power applications. Through a combination of our own R&D efforts and Potentia's expertise and intellectual property, we plan to introduce a series of new products designed to address a variety of high-power applications that we don't serve today. We estimate that these new products could increase our addressable market from about \$1.6 billion today to \$2 billion or more over the next two years or so, creating the potential for significant new revenue streams beginning in 2009.

In closing, I would like to thank our customers, partners, employees, and stockholders for your continued support. I look forward to reporting to you on our progress in the months ahead.

Sincerely,

Balu Balakrishnan
President and Chief Executive Officer
April 2008

CAUTIONARY NOTE REGARDING FORWARD-LOOKING STATEMENTS

This Annual Report on Form 10-K includes a number of forward-looking statements that involve many risks and uncertainties. In some cases, forward-looking statements are indicated by the use of words such as “would”, “could”, “will”, “may”, “expect”, “believe”, “should”, “anticipate”, “outlook”, “if”, “future”, “intend”, “plan”, “estimate”, “predict”, “potential”, “targets”, “seek” or “continue” and similar words and phrases, including the negatives of these terms, or other variations of these terms. These statements reflect our current views with respect to future events and our potential financial performance and are subject to risks and uncertainties that could cause our actual results and financial position to differ materially and adversely from what is projected or implied in any forward-looking statements included in this Form 10-K. These factors include, but are not limited to: our ability to maintain and establish strategic relationships; the risks inherent in the development and delivery of complex technologies; our ability to attract, retain and motivate qualified personnel; the emergence of new markets for our products and services, and our ability to compete in those markets based on timeliness, cost and market demand; and our limited financial resources. We make these forward looking statements based upon information available on the date of this Form 10-K, and we have no obligation (and expressly disclaim any obligation) to update or alter any forward-looking statements, whether as a result of new information or otherwise. In evaluating these statements, you should specifically consider the risks described under Item 1A of Part I—“Risk Factors,” Item 7 of Part II—“Management’s Discussion and Analysis of Financial Condition and Results of Operations” and elsewhere in this Annual Report on Form 10-K.

PART I

TOPSwitch, TinySwitch, LinkSwitch, DPA-Switch, EcoSmart, and PI Expert are trademarks of Power Integrations, Inc.

Item 1. Business

Overview

We design, develop, manufacture and market proprietary, high-voltage, analog integrated circuits, commonly referred to as ICs. Our ICs are used in electronic power supplies, also known as switched-mode power supplies or switchers. Power supplies convert electricity from a high-voltage source, such as a wall socket, to the type of power needed by a given electronic device, such as a cellphone or a computer. This conversion entails, among other functions, reducing the voltage and, when necessary, converting alternating current to direct current, referred to as AC-DC conversion. Switched-mode power supplies perform these functions using an array of electronic components, often including ICs such as ours. The vast majority of our ICs are used in AC-DC switchers, although we also target certain high-voltage DC-DC applications such as power over Ethernet, or PoE. Our focus is on applications that are sensitive to size, portability, energy efficiency and time-to-market, which are the primary benefits that our ICs provide. We generally target power-supply applications in the following markets:

- * the communications market;
- * the consumer market;
- * the computer market; and
- * the industrial market.

We believe our patented TOPSwitch ICs, introduced in 1994, were the first highly integrated power conversion ICs to achieve widespread market acceptance. Since the introduction of TOPSwitch, we have introduced a number of other families of ICs that further improve upon the functionality and cost-effectiveness of TOPSwitch and enable us to address a wider range of AC-DC applications as well as high-voltage DC-DC applications such as power-over-ethernet, or PoE. Since introducing TOPSwitch in 1994, we have shipped approximately 2.7 billion ICs.

Industry Background

Virtually every electronic device that plugs into a wall socket requires a power supply to convert the high-voltage alternating current provided by electric utilities into the low-voltage direct current required by most electronic devices. A power supply may be located inside a device, such as a DVD player or desktop computer, or it may be outside the device as in the case of a cellphone charger or an adapter for a cordless phone.

Until approximately 1970, AC-DC power supplies were generally in the form of line-frequency, or linear, transformers. These devices, consisting primarily of copper wire wound around an iron core, tend to be bulky and heavy, and typically waste a substantial amount of electricity. In the 1970s, the invention of high-voltage discrete semiconductors enabled the development of a new generation of power supplies known as switched-mode power supplies, or switchers. These switchers generally came to be a cost-effective alternative to linear transformers in applications requiring more than about three watts of power.

In addition to their cost advantages in higher-power applications, switchers are generally smaller, lighter-weight and more energy-efficient than linear transformers. However, switchers designed with discrete components are highly complex, containing numerous components and requiring a high level of analog design expertise. Further, discrete switchers can be relatively costly and difficult to manufacture due to their complexity

and high component count. These drawbacks tend to result in time-to-market and development risks for new products. Also, some discrete switchers lack inherent safety and energy-efficiency features; adding these features may further increase the component count, cost and complexity of the power supply.

Early attempts to replace discrete switchers with IC-based switchers did not achieve widespread acceptance in the marketplace because these integrated switchers were not cost-effective. In 1994 we introduced TOPSwitch, the industry's first cost-effective high-voltage IC for power conversion.

Our Highly Integrated Solution

Our patented ICs integrate onto a single chip many of the functions otherwise performed by numerous discrete electronic components. In particular, our ICs combine a high-voltage power transistor, or MOSFET, with low-voltage control circuitry. Because of this integration, our ICs enable power supplies to have superior features and functionality at a total cost equal to or lower than that of discrete switchers and linear transformers. Our products offer the following key benefits to power supplies:

- *Fewer Components, Reduced Size and Enhanced Functionality*

Our highly integrated ICs, used in combination with our patented power-supply design techniques, enable the design and production of switchers that use up to 70% fewer components compared to discrete switchers. For example, our ICs provide safety and reliability features such as thermal and short-circuit protection, while discrete switchers must include additional components, and therefore incur additional cost, to provide these functions. Switchers that incorporate our ICs are also smaller, lighter, and more portable than comparable power supplies built with linear transformers, which are still commonly used in many low-power applications.

- *Improved Efficiency*

Our patented EcoSmart technology, included in all of our ICs introduced since 1998, improves the energy efficiency of electronic devices during normal operation as well as standby and “no-load” conditions. This technology enables manufacturers to cost-effectively meet the growing demand for energy-efficient products, and to comply with increasingly stringent energy-efficiency requirements.

- *Reduced Time-to-Market*

Our integrated circuits make power supply designs simpler and more suitable for high-volume manufacturing compared to discrete switchers. We also provide automated design tools and reference designs that reduce time-to-market and product development risk.

- *Wide Power Range and Scalability*

We estimate that products in our current IC families can address a power range encompassing approximately 70 percent of the AC-DC power supplies, as well as certain high-voltage DC-DC applications. Within each of our product families, the designer can scale up or down in power to address a wide range of designs with minimal design effort.

Energy Efficiency

Linear transformers and many discrete switchers draw significantly more electricity than the amount needed by the devices they power. As a result, billions of dollars worth of electricity is wasted each year, and millions of tons of greenhouse gases are unnecessarily produced. Energy waste occurs during both normal operation of a device and in standby mode, when the device is performing little or no useful function. For example, computers and printers waste energy while in “sleep” mode. TVs and DVD players that are turned off by remote control consume energy while awaiting a remote control signal to turn them back on. A cellphone charger left plugged into a wall outlet continues to draw electricity even when not connected to the phone (a condition known as “no-load”). Many common household appliances, such as microwave ovens, dishwashers and washing machines,

consume power when not in use. One study has estimated that standby power alone amounted to as much as ten percent of residential energy consumption in Organization for Economic Co-operation and Development, or OECD, countries.

Lighting is another major source of energy waste. Only about five percent of the energy consumed by traditional incandescent light bulbs is converted to light, while the remainder is wasted as heat. The Alliance to Save Energy estimates that a conversion to efficient lighting technologies such as compact fluorescent bulbs and light-emitting diodes, or LEDs, could save as much as \$18 billion worth of electricity and 158 million tons of carbon dioxide emissions per year in the U.S. alone.

As concerns about the environmental impact of carbon emissions continue to mount, policymakers are taking action to promote energy efficiency. For example, the ENERGY STAR program and the European Union Code of Conduct encourage manufacturers of electronic devices such as home appliances, DVD players, computers, TVs and external power supplies to comply with voluntary energy-efficiency standards. In 2007, the California Energy Commission, or CEC, implemented mandatory efficiency standards for external power supplies. The CEC standards will be implemented nationwide in July 2008 as a result of the Energy Independence and Security Act of 2007 (EISA). The EISA also requires substantial improvements in the efficiency of lighting technologies beginning in 2012; these new rules are expected to result in increased adoption of compact fluorescent and LED technologies for general lighting. Plans to phase out incandescent lamps have also been announced in Canada, Australia and Europe. The EISA also incorporates the requirements of Executive Order 13221, signed in 2001 by President Bush, which requires that electronic products purchased by the Federal government consume less than one watt in standby mode.

Our EcoSmart technology, included in all of our ICs introduced since 1998, dramatically improves the efficiency of electronic devices, reducing waste in both operating and standby modes. We believe that this technology allows manufacturers to meet all current and proposed worldwide energy-efficiency regulations for electronic products. Our ICs can also be utilized in power conversion circuitry, or ballasts, for LED lighting, an emerging application for our technology. We estimate that our technology has saved more than \$2.6 billion in electricity costs worldwide since 1998.

Products

Below is a brief description of our products:

* *TOPSwitch*

TOPSwitch, our first commercially successful product, was introduced in 1994. The key benefits that the TOPSwitch family of products has brought to power supplies, compared to discrete switchers, are fewer components, reduced size, enhanced functionality and lower cost in many applications. Our TOPSwitch products integrate a pulse width modulation, or PWM, controller, a high-voltage MOSFET and a number of other electronic components.

In September 2007, we introduced TOPSwitch-HX, the fifth generation of the TOPSwitch family of products. TOPSwitch-HX incorporates the features offered in earlier TOPSwitch products as well as new features such as a multi-mode control scheme that provides highly efficient operation across the entire load range, eliminating the need for a separate standby power supply in some applications. TOPSwitch-HX addresses applications at the higher end of our current addressable power range including set-top boxes, DVD players, desktop computers, LCD monitors, and printers.

* *TinySwitch*

We introduced the TinySwitch family of products in September 1998. TinySwitch was the first family of ICs to incorporate our EcoSmart technology. In February 2006, we introduced the third generation of the TinySwitch line, TinySwitch-III. TinySwitch-III further improves upon the cost-effectiveness of

previous generations, and includes new features that further enhance design flexibility and energy efficiency. Applications for TinySwitch-III include standby power supplies for desktop PCs, adapters for such devices as cellphones, PDAs, digital cameras, computer peripherals, and power tools, as well as power supplies for home entertainment equipment, appliances, LED light fixtures and many other applications.

In March 2006 and May 2007, respectively, we introduced PeakSwitch and TinySwitch-PK, extensions of the TinySwitch family targeted at applications requiring a high peak-to-average power ratio, such as printers and audio amplifiers. These products supply momentary bursts of peak power by automatically increasing the switching frequency of the IC's integrated MOSFET for several milliseconds before returning to continuous-mode operation. This approach allows the use of transformers, capacitors and other components sized for the power supply's average continuous power rather than its peak power level.

* *LinkSwitch*

We introduced the LinkSwitch family of products in September 2002. The LinkSwitch family of products includes the LinkSwitch-TN, LinkSwitch-XT and LinkSwitch-LP family extensions. Deriving its name from the phrase "linear-killer switch," LinkSwitch is the industry's first highly integrated high-voltage power conversion IC designed specifically to replace linear transformers. Applications for LinkSwitch include low-power adapters and chargers for personal electronics such as cellphones, cordless phones, digital cameras, and MP3 players. LinkSwitch is also used in a wide range of other applications, including home appliances and industrial applications.

* *DPA-Switch*

The DPA-Switch family of products, introduced in June 2002, is the first monolithic high-voltage power conversion IC designed specifically for use in DC-DC converters and distributed power architectures. It is capable of supplying output power levels of up to 100 watts. DPA-Switch allows designers to eliminate up to 50 external components from the design of a typical discrete DC-DC converter, resulting in a shorter design cycle, smaller board size and higher reliability. Applications include power-over-Ethernet powered devices such as voice-over-IP phones and security cameras, as well as network hubs, line cards, servers, digital PBX phones, DC-DC converter modules and industrial controls.

Revenue mix by product family for the years ended December 31, 2007, 2006 and 2005 was approximately as follows:

<u>Product Family</u>	<u>Years Ended December 31,</u>		
	<u>2007</u>	<u>2006</u>	<u>2005</u>
TinySwitch	52%	53%	57%
TOPSwitch	28%	36%	38%
LinkSwitch	18%	9%	5%
DPA-Switch	2%	2%	—%

Markets and Customers

Our strategy is to target markets that can benefit the most from our highly integrated power conversion ICs. The following chart shows the primary applications of our products in power supplies in several major market categories.

<u>Market Category</u>	<u>Primary Applications</u>
<ul style="list-style-type: none">• <i>Communications</i>	Cellphone chargers, cordless phones, broadband modems, power-over-Ethernet devices including voice-over-IP phones, other network and telecom gear
<ul style="list-style-type: none">• <i>Consumer</i>	Set-top boxes for cable and satellite services, digital cameras, DVD players, LCD TVs, major appliances, personal care and small appliances, audio amplifiers
<ul style="list-style-type: none">• <i>Computer</i>	Standby power for desktop PCs and servers, LCD monitors, printers, LCD projectors, PDAs
<ul style="list-style-type: none">• <i>Industrial Electronics</i>	Industrial controls, utility meters, motor controls, uninterruptible power supplies, emergency lighting, LED lighting

Revenue by our end market categories for 2007 was approximately 30 percent consumer, 27 percent communications, 21 percent computer, 15 percent industrial electronics and 7 percent other markets.

Sales, Distribution and Marketing

We sell our products to original equipment manufacturers, or OEMs, and merchant power supply manufacturers through a direct sales staff and through a worldwide network of independent sales representatives and distributors. We have sales offices in California, Georgia and Illinois, as well as in England, France, Germany, Italy, India, China, Japan, Korea, Singapore and Taiwan. Direct sales to OEMs and merchant power supply manufacturers represented approximately 36%, 37% and 40% of our net product revenues for 2007, 2006 and 2005, respectively, while sales through distributors accounted for approximately 64%, 63% and 60% for 2007, 2006 and 2005, respectively. All distributors are entitled to certain return privileges based on sales revenue and are protected from price reductions affecting their inventories. Our distributors are not subject to minimum purchase requirements and sales representatives and distributors can discontinue marketing any of our products at any time.

Our top ten customers, including distributors that resell to OEMs and merchant power supply manufacturers, accounted for 62%, 58% and 69% of our net revenues for 2007, 2006 and 2005, respectively. For 2007 and 2006, one distributor, Avnet, accounted for approximately 23% of our net revenues in each year. In 2005, two distributors, Memec Electronic Components (since acquired by Avnet) and Synnex Technologies accounted for 19% and 18% of our net revenues, respectively. In April 2006, we terminated our distributor relationship with Synnex Technologies. We have replaced this relationship with other distribution relationships, and we do not believe that the termination has had or will have a material impact on our business. No other customers accounted for more than 10% of net revenues during 2007, 2006 and 2005. In 2007, 2006 and 2005, sales to customers in the United States accounted for approximately 4%, 6% and 6%, respectively, of our net revenues. See Note 2, "Summary of Significant Accounting Policies," in our notes to consolidated financial statements regarding sales to customers located in foreign countries. See our consolidated financial statements regarding total revenues and profit or loss for the last three fiscal years.

We are subject to certain risks stemming from the fact that much of our manufacturing, and most of our customers, are located in foreign jurisdictions. Risks related to our foreign operations are set forth in Item 1A of this Annual Report on Form 10-K, and include: potential weaker intellectual property rights under foreign laws; the burden of complying with foreign laws; and foreign-currency exchange risk.

Backlog

Our sales are primarily made pursuant to standard purchase orders. The quantity of products purchased by our customers as well as shipment schedules are subject to revisions that reflect changes in both the customers' requirements and in manufacturing availability. The semiconductor industry is characterized by short lead-time orders and quick delivery schedules. In light of industry practice and experience, we do not believe that backlog at any given time is a meaningful indicator of our ability to achieve any particular level of revenue or financial performance.

Technology

- *High-Voltage Transistor Structure and Process Technology*—We have developed a patented silicon technology that uses a proprietary high-voltage MOS transistor structure and fabrication process. This technology enables us to integrate high-voltage n-channel transistors and industry-standard CMOS and bipolar control circuitry on the same monolithic IC. Both the IC device structure and the wafer fabrication process contribute to the cost-effectiveness of our high-voltage technology. In 2000, we introduced an improved high-voltage technology that further reduced the silicon area of our devices by using dual-conduction layers. In 2004, we made additional improvements to our technology to further shrink the silicon area of our ICs. Our high-voltage ICs are implemented on low-cost silicon wafers using standard 5 V CMOS silicon processing techniques with a relatively large feature size of between 1.5 and 3 microns.
- *IC Design and System Technology*—Our IC designs combine complex control circuits and high-voltage transistors on the same monolithic IC. Our IC design technology takes advantage of our high-voltage process to minimize the die size of both the high-voltage device and control circuits and improve the performance of our ICs versus competing integrated technologies. We have also developed extensive expertise in the design of switching power supplies, resulting in innovative circuit topologies and design techniques that reduce component count and system cost, increase system performance, and improve energy efficiency compared to alternative approaches.

Research and Development

Our research and development efforts are focused on improving our high-voltage device structures, wafer fabrication processes, analog circuit designs and system-level architectures. We seek to introduce new products to expand our addressable markets, further reduce the costs of our products, and improve the cost-effectiveness and functionality of our customers' power supplies. We have assembled a team of highly skilled engineers to meet our research and development goals. These engineers have expertise in high-voltage device structure and process technology, analog design, and power supply system architecture. In December 2007 we augmented our research and development engineering team through the acquisition of Potentia Semiconductor Corporation, or Potentia, an early-stage developer of power-conversion ICs for high-power AC-DC power supplies. Potentia's engineering team, based in Ottawa, Canada, will form the core of a new analog design group for Power Integrations focused primarily on high-power applications with the potential to expand our addressable markets.

In 2007, 2006 and 2005, we incurred costs of \$25.2 million, \$24.4 million and \$17.1 million, respectively, on research and development efforts, including expenses related to stock-based compensation. We expect to continue to invest significant funds in research and development activities.

Intellectual Property and Other Proprietary Rights

We use a combination of patents, trademarks, copyrights, trade secrets and confidentiality procedures to protect our intellectual property rights. As of December 31, 2007, we held 197 U.S. patents and had generally filed for or received foreign patent protection on these patents resulting in 90 foreign patents. The U.S. patents have expiration dates ranging from 2009 to 2026. We also hold trademarks in the U.S. and various other countries including Taiwan, Korea, Hong Kong, China, Europe and Japan.

We regard as proprietary certain equipment, processes, information and knowledge that we have developed and used in the design and manufacture of our products. Our trade secrets include a high-volume production process that produces our patented high-voltage ICs. We attempt to protect our trade secrets and other proprietary information through non-disclosure agreements, proprietary information agreements with employees and consultants and other security measures.

We granted a perpetual, non-transferable license to Matsushita Electric Industrial Co, Ltd., or Matsushita, or MEI, to use our semiconductor patents and other intellectual property for our current high-voltage technology under a Technology License Agreement. This license allows Matsushita to manufacture and design products for internal use and for sale or distribution to other Japanese companies and their subsidiaries in Asia. In exchange for its license rights, Matsushita has paid and will continue to pay royalties on products using the licensed technology during fixed periods.

The Technology License Agreement with Matsushita expired in June 2005 and has not been renewed. As a result, Matsushita's right to use our technology does not include technology developed after June 2005. Matsushita may continue to sell products based on technology covered by the license agreement prior to its expiration, and will continue to pay us royalties on the sale of these products through June 2009. Matsushita may sell products based on technology covered by the Technology License Agreement without payment of royalties after June 2009.

Our long-lived assets consist of property and equipment and intangible assets. Our intangible assets are comprised of licenses, patents, goodwill and customer relationships. Our intangible assets are located in the United States and Canada and are split 79% and 21%, respectively. See Note 2, "Summary of Significant Accounting Policies," in our notes to consolidated financial statements regarding total intangible assets and property and equipment located in foreign countries.

Manufacturing

To manufacture our wafers, we contract with four foundries: (1) OKI Electric Industry, or OKI, (2) Seiko Epson Corporation or Epson, (3) XFAB Dresden GmbH & Co KG, or XFAB, (a wholly owned subsidiary of X-FAB Semiconductor Foundries AG), formerly ZFoundry and (4) Matsushita. These contractors manufacture our wafers at foundries located in Japan and Germany. Our products are assembled and packaged by independent subcontractors in China, Malaysia, Thailand and the Philippines. We perform testing at our facility in San Jose, California, and through our packaging subcontractors in Asia. Our fabless manufacturing model enables us to focus on our engineering and design strengths, minimize fixed costs on capital expenditures and still have access to high-volume manufacturing capacity. Our products do not require leading-edge process geometries for them to be cost-effective, and thus we can use our foundries' older, low-cost facilities for wafer manufacturing. However, because of our highly sensitive process, we must interact closely with our foundries to achieve satisfactory yields. Although we generally utilize standard IC packages for assembly, some materials and aspects of assembly are specific to our products. We require our assembly manufacturers to use a high-voltage molding compound which is more difficult to process than industry standard molding compounds. Until recently, this molding compound was procured from only one supplier. In December 2006, another high-voltage mold compound from a different supplier was qualified for use in manufacturing our products, allowing our manufacturers to source material from both suppliers. We will continue to investigate the use of alternative high-voltage molding compounds so that our assembly manufacturers have competitive sources of material. We will remain heavily involved with our contractors on an active engineering basis to maintain and improve our manufacturing processes.

Our wafer supply agreements with MEI, OKI, Epson and XFAB expire in June 2010, April 2008, December 2010 and December 2009, respectively. Under the terms of our agreement with MEI, we establish, by mutual agreement, minimum production capacity to be made available by MEI for the production of our wafers, and we supply MEI with monthly orders and rolling six-month forecasts on a monthly basis. We also establish pricing by good faith arrangements, subject to our right to most-favored pricing. Under the terms of the OKI agreement, OKI has agreed to reserve a specified amount of production capacity and to sell wafers to us at fixed prices,

which are subject to periodic review jointly by OKI and us. Our agreements with both MEI and OKI provide for the purchase of wafers in Japanese yen. The two agreements allow for mutual sharing of the impact of the exchange rate fluctuation between the Japanese yen and the U.S. dollar. Under the terms of the Epson agreement, Epson has agreed to reserve a specified amount of production capacity and to sell wafers to us at fixed prices, which are subject to periodic review jointly by Epson and us. The agreement with Epson also requires us to supply Epson with rolling six-month forecasts on a monthly basis. Our agreement with Epson provides for the purchase of wafers in U.S. dollars, however, we do share the impact of the exchange rate fluctuation between the Japanese yen and the U.S. dollar. Under the terms of the XFAB agreement, XFAB has agreed to reserve a specified amount of production capacity and to sell wafers to us at fixed prices, which are subject to periodic review jointly by XFAB and us. The agreement with XFAB also requires us to supply XFAB with rolling six-month forecasts on a monthly basis. Our purchases of wafers from XFAB are denominated in U.S. dollars.

Although certain aspects of our relationships with MEI, OKI, Epson and XFAB are contractual, some important aspects of these relationships are not written in binding contracts and depend on the suppliers' continued cooperation. We cannot assure that we will continue to work successfully with MEI, OKI, Epson or XFAB in the future, that they will continue to provide us with sufficient capacity at their foundries to meet our needs, or that any of them will not seek an early termination of their wafer supply agreement with us. Our operating results could suffer in the event of a supply disruption with OKI, MEI, Epson or XFAB if we were unable to quickly qualify alternative manufacturing sources for existing or new products or if these sources were unable to produce wafers with acceptable manufacturing yields.

We typically receive shipments from our foundries approximately four to six weeks after placing orders, and lead times for new products can be substantially longer. To provide sufficient time for assembly, testing and finishing, we typically need to receive wafers four to six weeks before the desired ship date to our customers. As a result of these factors and the fact that customers' orders can be placed with little advance notice, we have only a limited ability to react to fluctuations in demand for our products. We carry a substantial amount of wafer and finished goods inventory to help offset these risks and to better serve our markets and meet customer demand.

Competition

Competing alternatives to our high-voltage ICs include other integrated and hybrid (i.e., single-package) products from companies such as Fairchild Semiconductor, STMicroelectronics, Infineon, ON Semiconductor and Sanken Electric Company, as well as discrete components such as PWM controllers and high-voltage bipolar transistors and MOSFETs, which are produced by a large number of vendors. For some applications, line-frequency transformers are also a competing alternative to designs utilizing our ICs.

We have historically observed highly competitive pricing for discrete components and competing integrated/hybrid products. While the pricing of our ICs is an important factor considered by our customers, we also compete against alternative products based on a variety of other factors. Most importantly, the highly integrated nature of our ICs enables power supply designs that utilize fewer total components than comparable discrete designs or designs using other integrated/hybrid products. This reduced component count provides a cost savings on the bill of materials for a power supply, but also enables power supplies to be designed more quickly and manufactured more efficiently than competing designs.

In addition to enabling a lower component count, we also compete on the basis of product functionality such as safety features and energy-efficiency features, and on the basis of the technical support we provide to our customers. This support includes hands-on design assistance as well as a range of design tools and documentation such as software and reference designs. We also believe that our record of product quality and history of delivering products to our customers on a timely basis serve as additional competitive advantages.

On June 14, 2007, we announced the filing of a patent-infringement suit against one of our competitors, BCD Semiconductor Manufacturing Company Limited, a Chinese semiconductor company, and its U.S. affiliate,

BCD Semiconductor Corporation, to which we refer collectively as BCD. The suit alleges that certain power supply controller chips produced by BCD infringe upon certain of our patents. We are seeking damages as well as an injunction against the infringing products.

Warranty

We generally warrant that our products will substantially conform to the published specifications for 12 months from the date of shipment. Under the terms of our purchase orders, our liability is limited generally to either a credit equal to the purchase price or replacement of the defective part.

Employees

As of December 31, 2007, we employed 385 full time personnel, consisting of 96 in manufacturing, 100 in research and development, 155 in sales, marketing and applications support, and 34 in finance and administration.

Investor Information

We make available, free of charge, copies of our annual report on Form 10-K, quarterly reports on Form 10-Q, current reports on Form 8-K and amendments to those reports filed or furnished pursuant to Section 13(a) or 15(d) of the Exchange Act as soon as reasonably practicable after filing this material electronically or otherwise furnishing it to the SEC. You may obtain a free copy of these reports in the “investor info” section of our website, *www.powerint.com*. Our website address is provided solely for informational purposes. We do not intend, by this reference, that our website should be deemed to be part of this Annual Report. The reports filed with the SEC are also available at *www.sec.gov*.

Our corporate governance guidelines, the charters of our board committees, and our code of business conduct and ethics, including code of ethics provisions that apply to our principal executive officer, principal financial officer, controller and senior financial officers, are available in the corporate governance section of our website at *www.powerint.com*. These items are also available in print to any stockholder who requests them by calling (408) 414-9200.

Executive Officers of the Registrant

As of February 29, 2008, our executive officers, who are appointed by and serve at the discretion of the board of directors, were as follows:

<u>Name</u>	<u>Position With Power Integrations</u>	<u>Age</u>
Balu Balakrishnan . . .	President, Chief Executive Officer and Director	53
Douglas Bailey	Vice President, Marketing	41
Derek Bell	Vice President, Engineering	64
Bruce Renouard	Vice President, Worldwide Sales	47
John Tomlin	Vice President, Operations	60
Rafael Torres	Vice President, Finance and Administration, Chief Financial Officer and Secretary	40
Clifford J. Walker . . .	Vice President, Corporate Development	56

Balu Balakrishnan has served as president and chief executive officer and as a director of Power Integrations since January 2002. He served as president and chief operating officer from April 2001 to January 2002. From January 2000 to April 2001, he was vice president of engineering and strategic marketing. From September 1997 to January 2000, he was vice president of engineering and new business development. From September 1994 to September 1997, Mr. Balakrishnan served as vice president of engineering and marketing. Prior to joining Power Integrations in 1989, Mr. Balakrishnan was employed by National Semiconductor Corporation.

Douglas Bailey has served as our vice president of marketing since November 2004. From March 2001 to April 2004, he served as vice president of marketing at ChipX, a structured ASIC company. His earlier experience includes serving as business management and marketing consultant for Sapiential Prime, Inc., director of sales and business unit manager for 8x8, Inc., and serving in application engineering management for IIT, Inc. and design engineering roles with LSI Logic, Inmos, Ltd. and Marconi.

Derek Bell has served as our vice president of engineering and technology since April 2001. Previously Mr. Bell was the chief operations officer at Palmchip Corporation, an integration and software service company from August 2000 to January 2001. Mr. Bell was vice president of engineering for the professional services group at Synopsys, Inc. an electronic design automation company, during 1999 and 2000, vice president of strategic alliances at Cirrus Logic, Inc., a semiconductor company, from 1996 to 1999, vice president and general manager of the application specific product group at National Semiconductor Corporation, Inc. a semiconductor company, from 1995 to 1996 and served as president and chief executive officer of NovaSensor, a manufacturer of silicon sensors from 1990 to 1994. He also held various senior management positions at Signetics, a semiconductor company, from 1972 to 1990, most recently as group vice president.

Bruce Renouard has served as our vice president, worldwide sales since February 2002. Mr. Renouard joined our company in January 2002 as a member of the sales organization. From August 1999 to August 2001, he served as vice president, worldwide sales of Zoran Corporation, a provider of digital solutions in the multimedia and consumer electronics markets. Mr. Renouard held the position of director, worldwide market development from June 1997 to August 1999 for IDT/Centaur, an X 86 processor company. From January 1995 to June 1997, he served as national distribution sales manager for Cyrix Corp, a company specializing in Intel compatible processors.

John Tomlin has served as our vice president, operations since October 2001. From 1981 to 2001, Mr. Tomlin served in a variety of senior management positions in operations, service, logistics and marketing, most recently as vice president of worldwide operations at Quantum Corporation, a computer storage company.

Rafael Torres has served as our vice president, finance and administration, chief financial officer and secretary since July 2006. From November 2000 to July 2006, Mr. Torres served as chief financial officer of PLX Technology, Inc., a leading supplier of PCI Express and other standard input/output interconnect silicon for the communications, server, storage, embedded-control and consumer industries. From May 1999 to November 2000, he held a senior management position at PLX Technology, Inc. Prior to joining PLX, he served in financial management roles at OnCommand Corporation, a provider of on demand video services, and at Silicon Valley Group, a semiconductor equipment company. Mr. Torres is a Certified Public Accountant, and spent three years working in public accounting to obtain his certification.

Clifford J. Walker has served as our vice president, corporate development since June 1995. From September 1994 to June 1995, Mr. Walker served as vice president of Reach Software Corporation, a software company. From December 1993 to September 1994, Mr. Walker served as president of Morgan Walker International, a consulting company.

As of February 29, 2008, members of the board of directors were as follows:

<u>Name</u>	<u>Position With Power Integrations</u>	<u>Age</u>
Balu Balakrishnan	President, Chief Executive Officer and Director	53
Alan D. Bickell (2)	Director	71
Balakrishnan S. Iyer (2)(3)	Director	51
R. Scott Brown (1)	Director	66
Dr. James Fiebiger (2)(3)	Director	66
Steven J. Sharp (1)(3)	Director and Chairman of the Board	66
Nicholas E. Brathwaite (3)	Director	49
E. Floyd Kvamme (1)	Director	70

-
- (1) Member of the compensation committee
 - (2) Member of the audit committee
 - (3) Member of the nominating and governance committee

Balu Balakrishnan. Please refer to Mr. Balakrishnan's biography provided above.

Alan D. Bickell has served as a member of the board of directors since April 1999. Mr. Bickell spent more than 30 years with Hewlett-Packard Company, a computer-hardware company, serving as corporate senior vice president and managing director of geographic operations from 1992 until his retirement in 1996. Mr. Bickell serves on the board of directors of the Peking University Educational Foundation (USA).

Balakrishnan S. Iyer has served as a member of the board of directors since February 2004. From October 1998 to June 2003, Mr. Iyer served as senior vice president and chief financial officer for Conexant Systems, Inc., a designer, developer and seller of semiconductor systems solutions for communications applications. From January 1997 to September 1998, Mr. Iyer served as senior vice president and chief financial officer for VLSI Technology, Inc., a semiconductor company. Mr. Iyer also serves on the board of directors of Conexant Systems, Inc., a semiconductor system solutions company, Invitrogen Corporation, a life-science technology company, Qlogic Corporation, a storage networking solutions company, Skyworks Solutions, Inc., a wireless semiconductor company, and IHS Inc., a global provider of technical information, decision-support tools and related services.

R. Scott Brown has served as member of the board of directors since July 1999. Mr. Brown has been retired since May 1, 1999. From 1985 to May 1999, Mr. Brown served as senior vice president of worldwide sales and support for Xilinx, Inc., a designer and developer of complete programmable logic solutions for use by electronic equipment manufacturers.

Dr. James Fiebiger became a member of the board of directors in March 2006. Dr. Fiebiger is currently a consultant to the semiconductor and electronic design automation industries. From December 1999 to October 2004, he served as chairman and chief executive officer of Lovoltech Inc., a fabless semiconductor company. Dr. Fiebiger served as vice chairman of GateField Corporation, a fabless semiconductor company, from February 1999 until the company was sold to Actel Corporation in November 2000. He served as GateField Corporation's president and chief executive officer from June 1996 until February 1999. From October 1993 to June 1996, he was chairman and managing director of Thunderbird Technologies, Inc., a semiconductor technology licensing company. From December 1987 to September 1993 he was president and chief operating officer at VLSI Technology, Inc., a semiconductor company. From August 1981 to August 1985 he was senior corporate vice president and assistant general manager of Motorola, Inc. Semiconductor Products Sector, the semiconductor business of Motorola, a wireless and broadband communications company. Dr. Fiebiger is a member of the board of directors of Qlogic Corporation, an electronics company, Mentor Graphics Corporation, an electronic design automation company, Actel Corporation, a semiconductor company, and Pixelworks, Inc., a fabless semiconductor company.

Steven J. Sharp has served as a member of the board of directors since our inception in 1988, and was elected non-executive chairman of the board in May 2006. Mr. Sharp has served as chairman of the board of directors of TriQuint Semiconductor, Inc., a manufacturer of electronic components for the communications industry, since 1992. He joined TriQuint Semiconductor, Inc. as president, chief executive officer and director in September 1991. Mr. Sharp served as president and chief executive officer of TriQuint Semiconductor, Inc. until July 2002. Prior to TriQuint Semiconductor, Inc., Mr. Sharp was associated with various venture capital and startup semiconductor firms. He helped start Crystal Semiconductor (now Cirrus Logic, Inc.), Gazelle Microcircuits, Inc. (now TriQuint Semiconductor, Inc.), Megatest Corporation (now Teradyne, Inc.) and Volterra Semiconductor Corporation. He also founded Silicon Architects (now Synopsys, Inc.). Mr. Sharp also serves on the boards of several private companies and charitable organizations.

Nicholas E. Brathwaite has served as a member of the board of directors since January 2000. Mr. Brathwaite is currently a partner with Bigwood Capital LLC, an investment firm. From 2000 to 2007 he served as chief technology officer of Flextronics International Ltd., an electronics company. In 1995 Flextronics International Ltd. acquired nChip, Inc., a multi-chip module company, where Mr. Brathwaite held the position of vice president and general manager of operations from 1992 to 1996. As a founding member of nChip, Inc., Mr. Brathwaite was responsible for all manufacturing and operational activities including wafer fabrication, wafer test, and module assembly. Before joining nChip, Inc., Mr. Brathwaite spent six years with Intel Corporation, a microprocessor company, in various engineering management positions in technology development and manufacturing. He is also a member of the board of directors of Photon Dynamics, Inc., a yield management solutions company for the flat panel display market.

E. Floyd Kvamme has served as a member of the board of directors since September 1989. Mr. Kvamme is partner emeritus of Kleiner Perkins Caufield & Byers, a venture capital company. Mr. Kvamme also serves on the boards of National Semiconductor Corporation, a semiconductor company, Harmonic Inc., a broadband optical networking and digital video systems company, and two private companies.

Item 1A. Risk Factors

In addition to the other information in this report, the following factors should be considered carefully in evaluating our business before purchasing shares of our stock.

Our quarterly operating results are volatile and difficult to predict. If we fail to meet the expectations of public market analysts or investors, the market price of our common stock may decrease significantly. Our net revenues and operating results have varied significantly in the past, are difficult to forecast, are subject to numerous factors both within and outside of our control, and may fluctuate significantly in the future. As a result, our quarterly operating results could fall below the expectations of public market analysts or investors. If that occurs, the price of our stock may decline.

Some of the factors that could affect our operating results include the following:

- the volume and timing of orders received from customers;
- competitive pressures on selling prices;
- the demand for our products declining in the major end markets we serve;
- the inability to adequately protect or enforce our intellectual property rights;
- the volume and timing of orders placed by us with our wafer foundries and assembly subcontractors;
- continued impact of recently enacted changes in securities laws and regulations, including potential risks resulting from our evaluation of internal controls under the Sarbanes-Oxley Act of 2002;
- expenses we incur related to stock-based compensation may increase if we are required to change our assumptions used in the Black-Scholes model;
- expenses we are required to incur (or choose to incur) in connection with our litigation against Fairchild Semiconductor, System General Corporation, and BCD;
- we are being audited by the Internal Revenue Service, which is asserting that we owe additional taxes relating to a number of items;
- fluctuations in exchange rates, particularly the exchange rate between the U.S. dollar and the Japanese yen;
- the licensing of our intellectual property to one of our wafer foundries;
- the lengthy timing of our sales cycle;

- the lengthy timing of our sales cycle;
- undetected defects and failures in meeting the exact specifications required by our products;
- reliance on international sales activities for a substantial portion of our net revenues;
- our ability to develop and bring to market new products and technologies on a timely basis;
- the ability of our products to penetrate additional markets;
- attraction and retention of qualified personnel in a competitive market;
- changes in environmental laws and regulations; and
- earthquakes, terrorists acts or other disasters.

We do not have long-term contracts with any of our customers and if they fail to place, or if they cancel or reschedule orders for our products, our operating results and our business may suffer. Our business is characterized by short-term customer orders and shipment schedules. Our customer base is highly concentrated, and a relatively small number of distributors, OEMs and merchant power supply manufacturers account for a significant portion of our revenues. Our top ten customers, including distributors, accounted for 62%, of our net revenues for the year ended December 31, 2007. The ordering patterns of some of our existing large customers have been unpredictable in the past and we expect that customer-ordering patterns will continue to be unpredictable in the future. Not only does the volume of units ordered by particular customers vary substantially from period to period, but also purchase orders received from particular customers often vary substantially from early oral estimates provided by those customers for planning purposes. In addition, customer orders can be canceled or rescheduled without significant penalty to the customer. In the past we have experienced customer cancellations of substantial orders for reasons beyond our control, and significant cancellations could occur again at any time.

Intense competition in the high-voltage power supply industry may lead to a decrease in our average selling price and reduced sales volume of our products. The high-voltage power supply industry is intensely competitive and characterized by significant price sensitivity. Our products face competition from alternative technologies, such as linear transformers, discrete switcher power supplies, and other integrated and hybrid solutions. If the price of competing solutions decreases significantly, the cost effectiveness of our products will be adversely affected. If power requirements for applications in which our products are currently utilized go outside the cost-effective range of our products, some of these alternative technologies can be used more cost effectively. In addition, as our patents expire, our competitors could legally begin using the technology covered by the expired patents in their products, potentially increasing the performance of their products and/or decreasing the cost of their products, which may enable our competitors to compete more effectively. Our current patents may or may not inhibit our competitors from getting any benefit from an expired patent. One of our patents recently expired, and our remaining U.S. patents have expiration dates ranging from 2009 to 2026. We cannot assure that our products will continue to compete favorably or that we will be successful in the face of increasing competition from new products and enhancements introduced by existing competitors or new companies entering this market. We believe our failure to compete successfully in the high-voltage power supply business, including our ability to introduce new products with higher average selling prices, would materially harm our operating results.

If demand for our products declines in our major end markets, our net revenues will decrease. A limited number of applications of our products, such as cellphone chargers, standby power supplies for PCs, and power supplies for home appliances comprise a significant percentage of our net revenues. We expect that a significant level of our net revenues and operating results will continue to be dependent upon these applications in the near term. The demand for these products has been highly cyclical and has been impacted by economic downturns in the past. Any economic slowdown in the end markets that we serve could cause a slowdown in demand for our ICs. When our customers are not successful in maintaining high levels of demand for their products, their demand for our ICs decreases, which adversely affects our operating results. Any significant downturn in demand in these markets would cause our net revenues to decline and could cause the price of our stock to fall.

If we are unable to adequately protect or enforce our intellectual property rights, we could lose market share, incur costly litigation expenses, suffer incremental price erosion or lose valuable assets, any of which could harm our operations and negatively impact our profitability. Our success depends upon our ability to continue our technological innovation and protect our intellectual property, including patents, trade secrets, copyrights, and know-how. We are currently engaged in litigation to enforce our intellectual property rights, and associated expenses have been, and are expected to remain, material and have adversely affected our operating results. We cannot assure that the steps we have taken to protect our intellectual property will be adequate to prevent misappropriation, or that others will not develop competitive technologies or products. From time to time we have received, and we may receive in the future, communications alleging possible infringement of patents or other intellectual property rights of others. Costly litigation may be necessary to enforce our intellectual property rights or to defend us against claimed infringement. The failure to obtain necessary licenses and other rights, and/or litigation arising out of infringement claims could cause us to lose market share and harm our business.

As our patents expire, we will lose intellectual property protection previously afforded by those patents. Additionally, the laws of some foreign countries in which our technology is or may in the future be licensed may not protect our intellectual property rights to the same extent as the laws of the United States, thus limiting the protections applicable to our technology.

We depend on third-party suppliers to provide us with wafers for our products and if they fail to provide us sufficient wafers, our business may suffer. We have supply arrangements for the production of wafers with MEI, OKI, XFAB and Epson. Our contracts with these suppliers expire in June 2010, April 2008, December 2009 and December 2010, respectively. Although certain aspects of our relationships with MEI, OKI, XFAB and Epson are contractual, many important aspects of these relationships depend on their continued cooperation. We cannot assure that we will continue to work successfully with MEI, OKI, XFAB and Epson in the future, and that the wafer foundries' capacity will meet our needs. Additionally, one or more of these wafer foundries could seek an early termination of our wafer supply agreements. Any serious disruption in the supply of wafers from OKI, MEI, XFAB or Epson could harm our business. We estimate that it would take nine to 18 months from the time we identified an alternate manufacturing source to produce wafers with acceptable manufacturing yields in sufficient quantities to meet our needs.

Although we provide our foundries with rolling forecasts of our production requirements, their ability to provide wafers to us is ultimately limited by the available capacity of the wafer foundry. Any reduction in wafer foundry capacity available to us could require us to pay amounts in excess of contracted or anticipated amounts for wafer deliveries or require us to make other concessions to meet our customers' requirements. Any of these concessions could harm our business.

If our third-party suppliers and independent subcontractors do not produce our wafers and assemble our finished products at acceptable yields, our net revenues may decline. We depend on independent foundries to produce wafers, and independent subcontractors to assemble and test finished products, at acceptable yields and to deliver them to us in a timely manner. The failure of the foundries to supply us wafers at acceptable yields could prevent us from selling our products to our customers and would likely cause a decline in our net revenues. In addition, our IC assembly process requires our manufacturers to use a high-voltage molding compound that, until recently, has been available from only one supplier. In December 2006, an alternative molding compound, made by a different supplier was qualified for use on our highest volume package type. These compounds and their specified processing conditions require a more exacting level of process control than normally required for standard IC packages. Unavailability of assembly materials or problems with the assembly process can materially adversely affect yields, timely delivery and cost to manufacture. We may not be able to maintain acceptable yields in the future.

In addition, if prices for commodities used in our products increase significantly, raw materials costs of our suppliers would increase and could result in increased product costs our suppliers charge us. If we are not able to pass these costs on to our customers, this would have an adverse effect on our gross margins.

We are subject to stockholder litigation related to our internal investigation of our past practices related to stock option grants and the related restatement of our consolidated financial statements. In May 2006, we were informed that U.S. Department of Justice, or the DOJ, and the SEC, were conducting an investigation related to our internal investigation of our practices related to stock option grants. On November 2, 2007, we were informed by the staff of the SEC that they have terminated the investigation and are not recommending enforcement action be taken against us. In addition, three alleged shareholders of Power Integrations filed derivative complaints in the United States District Court for the Northern District of California, and two alleged shareholders filed derivative complaints in Superior Court of California, Santa Clara County, all purportedly on behalf of Power Integrations, against certain of our current and former executive officers and directors in connection with our option granting practices alleging, among other things, breaches of fiduciary duties and in the Federal court cases violations of Section 10(b) of the Securities Exchange Act of 1934. The shareholder derivative suits are discussed in more detail in Part I, Item 3 of this Form 10-K. The ongoing legal fees we are incurring in connection with these actions, or any attorneys' fees that we may be required to pay as a result of the derivative suits, would have an adverse effect on our operating results. Further, these actions have required a significant amount of our senior management's attention, and may continue to do so in the future, which detracts from their ability to manage our company's business.

Securities laws and regulations, including potential risk resulting from our evaluation of internal controls under the Sarbanes-Oxley Act of 2002, will continue to impact our results. Complying with the requirements of the Sarbanes-Oxley Act of 2002 and NASDAQ's conditions for continued listing have imposed significant legal and financial compliance costs, and are expected to continue to impose significant costs and management burden on us. These rules and regulations also may make it more expensive for us to obtain director and officer liability insurance, and we may be required to accept reduced coverage or incur substantially higher costs to obtain coverage. These rules and regulations could also make it more difficult for us to attract and retain qualified executive officers and members of our board of directors, particularly qualified members to serve on our audit committee.

Additionally, because these laws, regulations and standards promulgated by the Sarbanes-Oxley Act are subject to varying interpretations, their application in practice may evolve over time as new guidance becomes available. This evolution may result in continuing uncertainty regarding compliance matters and additional costs necessitated by ongoing revisions to our disclosure and governance practices.

Changes in assumptions used for our Statement of Financial Accounting Standards No. 123R, Share-Based Payment (SFAS 123R), calculation may increase our stock-based compensation expense. We determine the value of stock options granted using the Black-Scholes model. This model requires that we make certain assumptions, including an estimate of our expected life of stock options. Historically we have used the simplified method to calculate the expected life of stock option grants. This method assumes all options will be exercised midway between the vesting date and the contractual term of the option. In accordance with Staff Accounting Bulletin 107, or SAB 107, the simplified method could only be used until December 31, 2007. Beginning in January 2008 we are developing a new method based on our observations of employee option exercises. We will need to exercise judgment in deciding how best to stratify our employees into homogenous groups according to their exercise and post-vesting employment termination behaviors. In doing so, the life of stock option grants may change significantly, and therefore, may result in substantially higher stock-based compensation expenses. These changes in assumptions may have a material adverse effect on our operating results and could harm our stock price.

If we do not prevail in our litigation against Fairchild Semiconductor, System General, and BCD we will have expended significant financial resources, potentially without any benefit, and may also suffer the loss of proprietary rights. We are in patent litigation with each of Fairchild Semiconductor, System General Corp., and BCD Semiconductor Manufacturing Limited, and the outcome of this litigation is uncertain. While Fairchild has been found to willfully infringe four of our patents, and those patents have been found valid by a jury, there can be no assurance that we will be successful in obtaining financial damages or an injunction against the infringing

products. In addition, there is no assurance that we will be successful in obtaining financial damages or an injunction against all System General products or BCD products that infringe our patents. We have incurred, and expect to continue to incur, significant legal costs in conducting these lawsuits. Thus, even if we are successful in these lawsuits, the benefits of this success may fail to outweigh the significant legal costs we will have incurred.

We are being audited by the Internal Revenue Service which is asserting that we owe additional taxes relating to a number of items, and if we are not successful in defending our position we may be obligated to pay additional taxes, as well as penalties and interest, and may also have a higher effective income tax rate in the future. Our operations are subject to income and transaction taxes in the United States and in multiple foreign jurisdictions and to review or audit by the IRS and state, local and foreign tax authorities. In connection with an IRS audit of our United States Federal income tax returns for fiscal years 2002 and 2003, the IRS is asserting that we owe additional taxes relating to a number of items, the most significant of which is our research and development cost sharing arrangements with one of our subsidiaries. We disagree with the IRS's position; however, if we are not successful in defending our position, we could be required to pay additional taxes, penalties and interest for 2002 and 2003, as well as for subsequent years that are not currently under audit. Resolution of this matter could take considerable time, possibly years.

We believe the IRS's position with respect to certain items for which it has proposed adjustments is inconsistent with applicable tax laws, and that we have meritorious defenses to our position with respect to these proposed adjustments. Accordingly, we intend to continue to challenge the IRS's position on these matters vigorously. While we believe the IRS's asserted position on these matters is not supported by applicable law, we may be required to make additional payments in order to resolve these matters. If the IRS determines that we owe additional taxes for these matters, our results of operations and financial condition would be materially and adversely affected.

Fluctuations in exchange rates, particularly the exchange rate between the U.S. dollar and the Japanese yen, may impact our gross margin. The contract prices to purchase wafers from MEI and OKI are denominated in Japanese yen. The agreements with these vendors allow for mutual sharing of the impact of the exchange rate fluctuation between Japanese yen and the U.S. dollar. Nevertheless, changes in the exchange rate between the U.S. dollar and the Japanese yen could subject our gross profit and operating results to the potential for material fluctuations.

Matsushita has licenses to our technology, which it may use to our detriment. Pursuant to a Technology Agreement with Matsushita, which expired in June 2005, Matsushita has the perpetual right to manufacture and sell products that incorporate our technology to Japanese companies worldwide and to subsidiaries of Japanese companies located in Asia. Matsushita does not have rights to utilize technology developed by us after June 2005, when the agreement expired. According to the expired Technology Agreement, we will continue to receive royalties on Matsushita's sales through June 2009 at a reduced rate. Royalty revenues were less than 1% of total net revenues in each of the twelve months ended December 31, 2007 and 2006. However, these royalties are substantially lower than the gross profit we receive on direct sales, and we cannot assure that Matsushita will not use the technology rights to continue to develop and market competing products.

Because the sales cycle for our products can be lengthy, we may incur substantial expenses before we generate significant revenues, if any. Our products are generally incorporated into a customer's products at the design stage. However, customer decisions to use our products, commonly referred to as design wins, can often require us to expend significant research and development and sales and marketing resources without any assurance of success. These significant research and development and sales and marketing resources often precede volume sales, if any, by a year or more. The value of any design win will largely depend upon the commercial success of the customer's product. We cannot assure that we will continue to achieve design wins or that any design win will result in future revenues. If a customer decides at the design stage not to incorporate our products into its product, we may not have another opportunity for a design win with respect to that product for many months or years.

Our products must meet exacting specifications, and undetected defects and failures may occur which may cause customers to return or stop buying our products. Our customers generally establish demanding specifications for quality, performance and reliability, and our products must meet these specifications. ICs as complex as those we sell often encounter development delays and may contain undetected defects or failures when first introduced or after commencement of commercial shipments. We have from time to time in the past experienced product quality, performance or reliability problems. If defects and failures occur in our products, we could experience lost revenue, increased costs, including warranty expense and costs associated with customer support and customer expenses, delays in or cancellations or rescheduling of orders or shipments and product returns or discounts, any of which would harm our operating results.

Our international sales activities account for a substantial portion of our net revenues, which subjects us to substantial risks. Sales to customers outside of the Americas account for, and have accounted for a large portion of our net revenues, including approximately 95% of our net revenues for the year ended December 31, 2007, and 93% for each of the years ended December 31, 2006 and 2005. If our international sales declined and we were unable to increase domestic sales, our revenues would decline and our operating results would be harmed. International sales involve a number of risks to us, including:

- potential insolvency of international distributors and representatives;
- reduced protection for intellectual property rights in some countries;
- the impact of recessionary environments in economies outside the United States;
- tariffs and other trade barriers and restrictions;
- the burdens of complying with a variety of foreign and applicable U.S. Federal and state laws; and
- foreign-currency exchange risk.

Our failure to adequately address these risks could reduce our international sales and materially adversely affect our operating results. Furthermore, because substantially all of our foreign sales are denominated in U.S. dollars, increases in the value of the dollar cause the price of our products in foreign markets to rise, making our products more expensive relative to competing products priced in local currencies.

If our efforts to enhance existing products and introduce new products are not successful, we may not be able to generate demand for our products. Our success depends in significant part upon our ability to develop new ICs for high-voltage power conversion for existing and new markets, to introduce these products in a timely manner and to have these products selected for design into products of leading manufacturers. New product introduction schedules are subject to the risks and uncertainties that typically accompany development and delivery of complex technologies to the market place, including product development delays and defects. If we fail to develop and sell new products in a timely manner, our net revenues could decline.

In addition, we cannot be sure that we will be able to adjust to changing market demands as quickly and cost-effectively as necessary to compete successfully. Furthermore, we cannot assure that we will be able to introduce new products in a timely and cost-effective manner or in sufficient quantities to meet customer demand or that these products will achieve market acceptance. Our failure, or our customers' failure, to develop and introduce new products successfully and in a timely manner would harm our business. In addition, customers may defer or return orders for existing products in response to the introduction of new products. Although we maintain reserves for potential customer returns, we cannot assure that these reserves will be adequate.

If our products do not penetrate additional markets, our business will not grow as we expect. We believe that our future success depends in part upon our ability to penetrate additional markets for our products. We cannot assure that we will be able to overcome the marketing or technological challenges necessary to penetrate additional markets. To the extent that a competitor penetrates additional markets before we do, or takes market share from us in our existing markets, our net revenues and financial condition could be materially adversely affected.

We must attract and retain qualified personnel to be successful and competition for qualified personnel is intense in our market. Our success depends to a significant extent upon the continued service of our executive officers and other key management and technical personnel, and on our ability to continue to attract, retain and motivate qualified personnel, such as experienced analog design engineers and systems applications engineers. The competition for these employees is intense, particularly in Silicon Valley. The loss of the services of one or more of our engineers, executive officers or other key personnel could harm our business. In addition, if one or more of these individuals leaves our employ, and we are unable to quickly and efficiently replace those individuals with qualified personnel who can smoothly transition into their new roles, our business may suffer. We do not have long-term employment contracts with, and we do not have in place key person life insurance policies on, any of our employees.

Changes in environmental laws and regulations may increase our costs related to obsolete products in our existing inventory. Changing environmental regulations and the timetable to implement them continue to impact our customers' demand for our products. As a result there could be an increase in our inventory obsolescence costs for products manufactured prior to our customers' adoption of new regulations. Currently we have limited visibility into our customers' strategies to implement these changing environmental regulations into their business. The inability to accurately determine our customers' strategies could increase our inventory costs related to obsolescence.

In the event of an earthquake, terrorist act or other disaster, our operations may be interrupted and our business would be harmed. Our principal executive offices and operating facilities situated near San Francisco, California, and most of our major suppliers, which are wafer foundries and assembly houses, are located in areas that have been subject to severe earthquakes. Many of our suppliers are also susceptible to other disasters such as tropical storms, typhoons or tsunamis. In the event of a disaster, we or one or more of our major suppliers may be temporarily unable to continue operations and may suffer significant property damage. Any interruption in our ability or that of our major suppliers to continue operations at our facilities could delay the development and shipment of our products.

Like other U.S. companies, our business and operating results are subject to uncertainties arising out of economic consequences of current and potential military actions or terrorist activities and associated political instability, and the impact of heightened security concerns on domestic and international travel and commerce. These uncertainties could also lead to delays or cancellations of customer orders, a general decrease in corporate spending or our inability to effectively market and sell our products. Any of these results could substantially harm our business and results of operations, causing a decrease in our revenues.

We have adopted anti-takeover measures which may make it more difficult for a third party to acquire us. Our board of directors may issue up to 2,925,000 shares of preferred stock and determine the price, rights, preferences and privileges of those preferred shares without any further vote or action by the stockholders. The rights of the holders of common stock will be subject to, and may be adversely affected by, the rights of the holders of any preferred stock that may be issued in the future. The issuance of shares of preferred stock, while potentially providing flexibility in connection with possible acquisitions and for other corporate purposes, could make it more difficult for a third party to acquire a majority of our outstanding voting stock. We have no present intention to issue shares of preferred stock.

In addition, we have entered into a rights agreement, commonly referred to as a "poison pill," to guard against abusive hostile takeover tactics. Further, the anti-takeover provisions of Section 203 of the Delaware General Corporations Law apply to us. Our rights agreement and Section 203 of the Delaware General Corporations Law may discourage, delay or prevent a change in control of Power Integrations.

Item 1B. Unresolved Staff Comments.

Not applicable.

Item 2. Properties.

We own our principal executive, administrative, manufacturing and technical offices which are located in San Jose, California in a 118,000 square foot facility. In addition to our facility in San Jose, we also lease sales offices in various countries around the world to accommodate our sales force. We believe that our current facilities are sufficient for our company for the foreseeable future.

Item 3. Legal Proceedings.

On June 28, 2004, we filed a complaint for patent infringement in the U.S. District Court, Northern District of California, against System General Corporation (System General), a Taiwanese company, and its U.S. subsidiary. Our complaint alleges that certain integrated circuits produced by System General infringed and continue to infringe certain of our patents. We seek, among other things, an order enjoining System General from infringing our patents and an award for damages resulting from the alleged infringement. On June 10, 2005, in response to the initiation of the U.S. International Trade Commission (“ITC”) investigation (discussed below), the District Court stayed all proceedings. Subsequent to the completion of the ITC proceedings, the District Court temporarily lifted the stay. On December 6, 2006, System General filed a notice of appeal of the ITC decision as discussed below. In response, and by agreement of the parties, the District Court renewed the stay of proceedings pending the outcome of the Federal Circuit appeal of the ITC determination.

On May 9, 2005, we filed a Complaint with the ITC under section 337 of the Tariff Act of 1930, as amended, 19 U.S.C. section 1337. We filed a supplement to the complaint on May 24, 2005. We alleged infringement of our patents pertaining to pulse width modulation (“PWM”) integrated circuit devices, which are used in power conversion applications such as power supplies for computer monitors. The Commission instituted an investigation on June 8, 2005 in response to our complaint. System General Corporation filed a response to the ITC complaint asserting that the patents-in-suit were invalid and not infringed. We subsequently and voluntarily narrowed the number of patents and claims in suit, which proceeded to a hearing. The hearing on the investigation was held before the Administrative Law Judge (“ALJ”) from January 18 to January 24, 2006. Post-hearing briefs were submitted and briefing concluded February 24, 2006. The ALJ’s initial determination issued on May 15, 2006. The ALJ found all remaining asserted claims valid and infringed, and recommended the exclusion of the infringing products as well as certain downstream products that contain the infringing products. After further briefing, on June 30, 2006 the Commission decided not to review the initial determination on liability, but did invite briefs on remedy, bonding and the public interest. On August 11, 2006 the Commission issued an order excluding from entry into the United States the infringing Systems General PWM chips, and any LCD computer monitors, AC printer adapters and sample/demonstration circuit boards containing an infringing Systems General chip. The U.S. Customs Service is authorized to enforce the exclusion order. On October 11, 2006, the presidential review period expired without any action from the President, and the ITC exclusion order is now in full effect. On December 6, 2006 System General filed a notice of appeal of the ITC decision. Briefing was completed on July 23, 2007, and oral argument was heard by the U.S. Court of Appeals for the Federal Circuit on November 9, 2007. On November 19, 2007, the Federal Circuit affirmed the ITC’s findings in all respects. Because System General did not file a petition for rehearing or rehearing en banc or petition the Supreme Court for certiorari within the time required to do so, the ITC’s decision is now final.

On October 20, 2004, we filed a complaint against Fairchild Semiconductor International, Inc. and Fairchild Semiconductor Corporation (referred to collectively as “Fairchild”) in the United States District Court for the District of Delaware. In our complaint, we alleged that Fairchild has and is infringing four Power Integrations’ patents pertaining to PWM integrated circuit devices. Fairchild denied infringement and asked for a declaration from the court that it does not infringe any Power Integration patent and that the patents are invalid. The Court held a claim construction hearing on February 2, 2006 and issued a claim construction order on March 31, 2006 which was favorable to us. The Court set a first trial on the issues of infringement, willfulness and damages for October 2, 2006. At the close of the first trial, on October 10, 2006, the jury returned a verdict in favor of us finding all asserted claims of all four patents-in-suit to be willfully infringed by Fairchild and awarding \$33,981,781 in damages. Although the jury awarded damages, and we will request the damages to be enhanced

in view of the jury's finding on willfulness, at this stage of the proceedings we cannot state the amount, if any, which might ultimately be recovered by us from Fairchild, and no benefits have been recorded in our consolidated financial statements as a result of the damages award. Fairchild raised defenses contending that the asserted patents are invalid or unenforceable, and the court held a second trial on these issues beginning on September 17, 2007. On September 21, 2007, the jury returned a verdict in our favor, affirming the validity of the asserted claims of all four patents-in-suit. Fairchild submitted further materials on the issue of enforceability along with various other post-trial motions, and the Court will address those issues along with our motions seeking increased damages and attorneys fees, an accounting and interest on the damages award and a permanent injunction, in the coming months. Briefing on these various issues was completed on January 16, 2008, but the Court has not yet scheduled a hearing.

On April 11, 2006, Fairchild Semiconductor Corporation and Intersil Corporation filed a patent infringement lawsuit against us in the U.S. District Court for the Eastern District of Texas. The complaint asserted that we infringed on an old Intersil patent that Fairchild recently secured exclusive rights to assert against us but Fairchild and Intersil did not identify any specific products they believe infringe the patent. Fairchild and Intersil's lawsuit was flawed because both Fairchild and Intersil lacked standing to sue us and it was also duplicative of a portion of our suit against Fairchild in Delaware, and we therefore filed a motion addressing both issues. The Texas Court granted our motion to transfer the case to Delaware on March 6, 2007, and the case was transferred to Delaware and assigned to Judge Farnan, the presiding judge in the Fairchild case discussed above. We then renewed our motion to dismiss the case for lack of standing, the Court held a hearing on October 5, 2007, and the Court dismissed, without prejudice, Fairchild and Intersil's case against us on December 20, 2007. Fairchild and Intersil did not appeal the Court's dismissal within the time provided for such an appeal.

On June 14, 2007, we filed a complaint for patent infringement in the U.S. District Court, Northern District of California, against Shanghai SIM-BCD Semiconductor Manufacturing Limited, a Chinese company, and its U.S. sister corporation, BCD Semiconductor Corporation (referred to collectively as "BCD"). Our complaint alleged that certain integrated circuits produced by BCD infringe certain of our patents, seeking, among other things, an order enjoining BCD from infringing our patents and an award for damages resulting from the alleged infringement. We voluntarily dismissed the California case against BCD on October 15, 2007 and filed a substantially identical complaint against BCD in the United States District Court for the District of Delaware on October 15, 2007. BCD has not yet answered the complaint. On January 21, 2008, BCD moved to dismiss the Delaware action for lack of personal jurisdiction in favor of a declaratory judgment action it filed against us on the same patents in the U.S. District Court, Northern District of California, discussed in further detail below. Briefing on this motion is complete. On January 25, 2008, we moved for a preliminary injunction against further sales of the accused BCD products based on infringement of one of the three patents in suit. BCD's opposition to the motion is due on April 7, 2008, and our reply is due April 28, 2008. The Court has set a hearing for our motion for preliminary injunction and BCD's motion to dismiss on May 5, 2008.

On January 18, 2008, BCD filed a complaint in the U.S. District Court, Northern District of California seeking a declaratory judgment of non-infringement and invalidity with respect to the three patents we asserted against BCD in the Delaware action discussed above. We have not yet answered the complaint, but BCD has stated that it will dismiss the California case in favor of the Delaware action if it does not prevail in its motion to dismiss the Delaware action.

On April 25, 2006, Kimberly Quaco, an alleged shareholder, filed a derivative complaint in the United States District Court for the Northern District of California, purportedly on behalf of Power Integrations, against certain of Power Integrations' current and former executives and members of our board of directors relating to our historical stock option granting practices. On August 1, 2006, Kathryn L. Champlin, another alleged shareholder, filed a similar derivative complaint in the United States District Court for the Northern District of California purportedly on behalf of Power Integrations. On September 21, 2006, Christopher Deboskey, another alleged shareholder, filed a similar derivative suit in the United States District Court for the Northern District of California purportedly on behalf of Power Integrations. On November 30, 2006, Ms. Champlin voluntarily

dismissed her suit. On December 18, 2006, the Court appointed Ms. Quaco's counsel as lead counsel and ordered that another purported shareholder, Mr. Geoffrey Wren, be substituted in as lead plaintiff. On January 17, 2007, the plaintiffs filed their consolidated complaint. On August 3, 2007, plaintiffs filed an amended consolidated complaint. The amended consolidated complaint alleges, among other things, that the defendants breached their fiduciary duties by improperly backdating stock option grants in violation of Power Integrations' shareholder approved stock option plans, improperly recording and accounting for the backdated options, improperly taking tax deductions based on the backdated options, and disseminating false financial statements that improperly recorded the backdated option grants. The amended consolidated complaint asserts claims for, among other things, breach of fiduciary duty, unjust enrichment, and violations of Section 10(b) of the Securities Exchange Act of 1934. On January 30, 2008, the parties agreed to settle the dispute. The settlement is subject to court approval. On February 1, 2008, plaintiffs filed a motion for preliminary approval of the settlement, and a hearing was scheduled for March 24, 2008.

On May 26, 2006, Stanley Banko, an alleged shareholder, filed a derivative complaint in the Superior Court of California, Santa Clara County, purportedly on behalf of Power Integrations, against certain of our current and former executives and members of Power Integrations' board of directors relating to our historical stock option granting practices. On May 30, 2006, Joan Campbell, also an alleged shareholder, filed a derivative suit in the Superior Court of California, Santa Clara County, making the identical allegations asserted in the Banko lawsuit. On June 30, 2006, pursuant to a stipulation by the parties, the Court consolidated the two cases into a single proceeding and required plaintiffs to file an amended, consolidated complaint. Plaintiffs filed their consolidated complaint on August 14, 2006, in which plaintiffs named additional officers and former officers and KPMG LLP, Power Integrations' former auditor, as new defendants. The consolidated complaint alleges, among other things, that the defendants caused or allowed Power Integrations' executives to manipulate their stock option grant dates, that defendants improperly backdated stock option grants, and that costs associated with the stock option grants were not properly recorded in Power Integrations' financial statements. The complaint asserts claims for, among other things, insider trading, breach of fiduciary duty, gross mismanagement and unjust enrichment. On January 30, 2008, the parties agreed to settle the dispute. On February 28, 2008, the parties submitted a stipulation to the Court requesting that the action be stayed pending the final order approving the settlement and entry of the final order and judgment in the Quaco Action.

On May 23, 2006, the U.S. Attorney's Office for the Northern District of California, or the DOJ, issued a grand jury subpoena to us directing that we produce documents relating to the granting of stock options from 1995 through the present. Subsequently the government made a number of requests for us to voluntarily produce documents relating to, among other things, our stock option practices. The government also conducted voluntary interviews of certain current and former officers and employees. We cooperated fully with the DOJ. The SEC was also conducting an investigation, and on November 2, 2007, we were informed by the staff of the SEC that they have terminated the investigation and are not recommending enforcement action be taken against us.

The Internal Revenue Service, or IRS, is conducting an audit of our 2002 and 2003 tax returns. The IRS has issued a number of Notices of Proposed Adjustment to these returns. Among other things, the IRS has challenged several aspects of our research and development cost-sharing arrangement, which was put into place on November 1, 2003. While we have agreed to some of the adjustments proposed by the IRS, we dispute other proposed adjustments.

There can be no assurance that we will prevail in our litigation with System General, Fairchild or BCD. This litigation, whether or not determined in our favor or settled, will be costly and will divert the efforts and attention of our management and technical personnel from normal business operations, potentially causing a material adverse effect on our business, financial condition and operating results. In addition, we are unable to predict the outcome of the other legal proceedings and matters described above. Adverse determinations in litigation could result in monetary losses, the loss of our proprietary rights, subject us to significant liabilities, require us to seek licenses from third parties or prevent us from licensing our technology, any of which could have a material adverse effect on our business, financial condition and operating results.

Item 4. Submission of Matters to a Vote of Security Holders.

At the Annual Meeting of Stockholders of Power Integrations, Inc. held on November 7, 2007, the following proposals were adopted.

Proposal I—To elect the following persons as Class III directors to hold office for a three-year term and until their successors are elected and qualified:

	<u>Voted For</u>	<u>Withheld</u>	<u>Broker Non-Votes</u>
Alan D. Bickell	15,741,161	10,789,499	—
Balakrishnan S. Iyer	21,069,020	5,461,640	—

Power Integrations' other directors are R. Scott Brown, James Fiebiger and Steven J. Sharp (each of whose terms expire in 2008) and Balu Balakrishnan, Nicholas E. Brathwaite and E. Floyd Kvamme (each of whose terms expire in 2009).

Proposal II—To approve an amendment to Power Integrations' Restated Certificate of Incorporation to declassify the Board of Directors:

<u>Voted For</u>	<u>Voted Against</u>	<u>Abstain</u>	<u>Broker Non-Votes</u>
26,356,310	166,309	8,041	—

Proposal III—To approve the amendment and restatement of the Power Integrations, Inc. 1997 Stock Option Plan (to be renamed the Power Integrations, Inc. 2007 Equity Incentive Plan) primarily for the purpose of expanding the types of equity awards that may be granted under the plan:

<u>Voted For</u>	<u>Voted Against</u>	<u>Abstain</u>	<u>Broker Non-Votes</u>
13,629,469	10,700,035	27,205	2,173,951

Proposal IV—To ratify the selection by the Audit Committee of Deloitte & Touche LLP as the independent registered public accounting firm of Power Integrations, Inc. for the fiscal year ending December 31, 2007:

<u>Voted For</u>	<u>Voted Against</u>	<u>Abstain</u>	<u>Broker Non-Votes</u>
26,477,466	20,873	32,321	—

PART II

Item 5. Market for Registrant's Common Equity, Related Stockholder Matters and Issuer Purchases of Equity Securities.

Our common stock trades on the NASDAQ Global Market under the symbol "POWI". From December 19, 2006 to August 13, 2007 and from August 2, 2006 to October 30, 2006 our common stock traded on the Pink Sheets under the symbol "POWI.PK." The following table shows the high and low sales prices per share of our common stock as reported on the NASDAQ Global Market for the periods indicated during which our common stock traded on the NASDAQ Global Market. For the periods in which our common stock was traded on the Pink Sheets, the prices below reflect high and low bid quotations, which reflect inter-dealer prices, without retail mark-up, mark-down or commission and may not necessarily represent actual transactions:

<u>Year Ended December 31, 2007</u>	<u>Price Range</u>	
	<u>High</u>	<u>Low</u>
Fourth quarter	\$34.52	\$29.45
Third quarter	\$31.20	\$25.00
Second quarter	\$30.20	\$22.50
First quarter	\$26.15	\$20.50
<u>Year Ended December 31, 2006</u>	<u>High</u>	<u>Low</u>
Fourth quarter	\$28.25	\$18.28
Third quarter	\$20.57	\$13.71
Second quarter	\$25.78	\$15.00
First quarter	\$28.27	\$23.35

As of February 29, 2008, there were approximately 76 stockholders of record. Because brokers and other institutions hold many of our shares on behalf of stockholders, we are unable to estimate the total number of stockholders represented by these record holders.

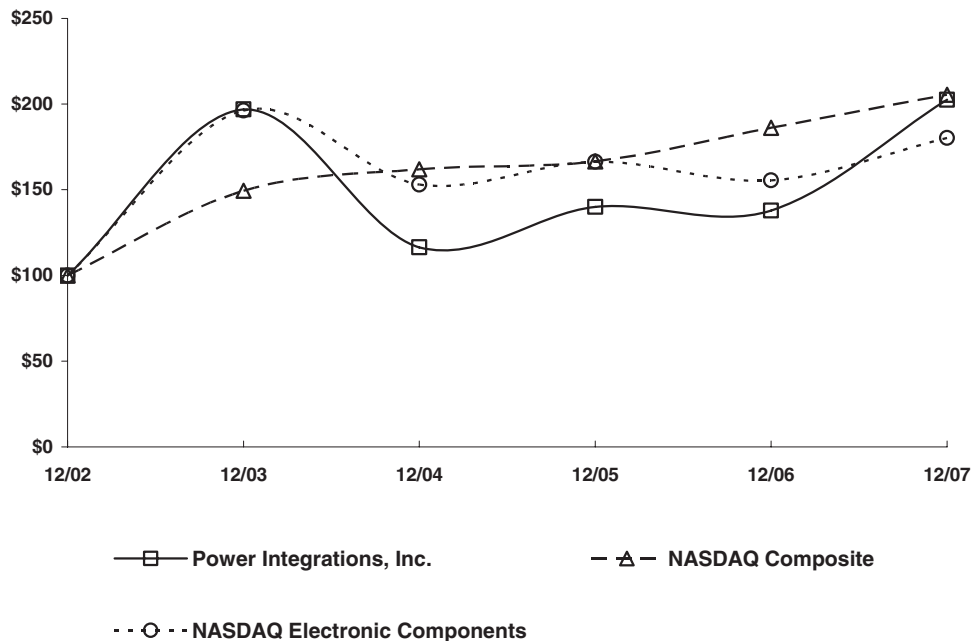

We have not paid any cash dividends on our capital stock and do not anticipate paying any cash dividends in the foreseeable future.

Performance Graph (1)

The following graph shows the cumulative total stockholder return of an investment of \$100 in cash on December 31, 2002, through December 31, 2007, for (a) our common stock, (b) The NASDAQ Composite Index and (c) The NASDAQ Electronic Components Index. Pursuant to applicable SEC rules, all values assume reinvestment of the full amount of all dividends, however no dividends have been declared on our common stock to date. The stockholder return shown on the graph below is not necessarily indicative of future performance, and we do not make or endorse any predictions as to future stockholder returns.

COMPARISON OF 5 YEAR CUMULATIVE TOTAL RETURN*

Among Power Integrations, Inc., The NASDAQ Composite Index
And The NASDAQ Electronic Components Index

* \$100 invested on 12/31/02 in stock or index-including reinvestment of dividends.
Fiscal year ending December 31.

(1) This Section is not “soliciting material,” is not deemed “filed” with the SEC and is not to be incorporated by reference in any filing of Power Integrations under the Securities Act of 1933, as amended, or the Securities Exchange Act of 1934, whether made before or after the date hereof and irrespective of any general incorporation language in any such filing.

Item 6. Selected Financial Data.

The following selected consolidated financial data should be read in conjunction with “Management’s Discussion and Analysis of Financial Condition and Results of Operations” and the consolidated financial statements and the notes thereto included elsewhere in this Form 10-K to fully understand factors that may affect the comparability of the information presented below. We derived the selected consolidated balance sheet data as of December 31, 2007 and 2006 and the consolidated statements of income data for the years ended December 31, 2007, 2006 and 2005 from our audited consolidated financial statements, and accompanying notes, in this Annual Report on Form 10-K. The consolidated statements of income data for each of the years ended December 31, 2004 and 2003 and the consolidated balance sheet data as of December 31, 2005, 2004 and 2003 are derived from consolidated financial statements which are not included in this report. Our historical results are not necessarily indicative of results for any future period.

	Year Ended December 31,				
	2007	2006	2005	2004	2003
	(in thousands, except per share data)				
Consolidated Statements of Income:					
Net revenues	\$191,043	\$162,403	\$143,071	\$136,653	\$125,682
Cost of revenues	87,558	73,794	72,979	71,856	63,496
Gross profit	103,485	88,609	70,092	64,797	62,186
Operating expenses:					
Research and development	25,176	24,415	17,111	15,440	20,107
Sales and marketing	26,940	25,712	18,314	16,070	17,166
General and administrative	24,249	34,648	15,665	7,969	10,868
In-process research and development	1,370	—	—	—	—
Total operating expenses	77,735	84,775	51,090	39,479	48,141
Income from operations	25,750	3,834	19,002	25,318	14,045

Item 7. Management’s Discussion and Analysis of Financial Condition and Results of Operations

The following discussion and analysis of our financial condition and results of our operations should be read in conjunction with the consolidated financial statements and the notes to those statements included elsewhere in this Annual Report on Form 10-K. This discussion contains forward-looking statements that involve risks and uncertainties. Our actual results could differ materially from those contained in these forward-looking statements due to a number of factors, including those discussed in Part I, Item 1A—“Risk Factors” and elsewhere in this report.

Business Overview

We design, develop, manufacture and market proprietary, high-voltage analog ICs for use primarily in electronic power supplies, also known as switched-mode power supplies or switchers. Our ICs are used in AC-DC and DC-DC power supplies in a wide variety of electronic products, primarily in the consumer, communications, computer and industrial electronics markets. Accelerating the penetration of our ICs into this addressable market is our primary strategic objective.

Our ICs are purchased primarily by merchant power supply manufacturers who sell power supplies to OEMs, and, in some cases, by OEMs who design and build their own power supplies. In 2007, approximately 64% of our net sales to these end customers were made through distributors of electronic components. Power supplies may be designed with our monolithic ICs, which combine a high-voltage transistor with low-voltage control circuitry, or with a number of competing alternatives. These alternatives include other monolithic and hybrid ICs, PWM controller ICs paired with discrete transistors, and legacy technologies that do not utilize ICs, such as line-frequency transformers and self-oscillating switchers using discrete components.

Our sales process involves significant effort to convince our customers to design their power supplies using our ICs as components. Competition for these “design wins” at our end customers is intense, as the power-supply industry is extremely price-sensitive. We attempt to differentiate our offerings from competing alternatives through innovation aimed at helping our customers minimize the total cost of their power supplies while meeting the performance specifications demanded by their end customers. Much of this innovation is embodied in the features and functionality of our ICs, as well as in various power-supply design techniques developed by us for use by our customers. Further, we attempt to minimize the cost of producing our ICs through continuous improvement of our proprietary manufacturing process as well as other manufacturing efficiencies.

We employ a variety of methods for marketing and selling our products in an effort to accelerate the penetration of our addressable markets. We employ a staff of sales personnel and field applications engineers around the world, and have increased the size of this staff considerably over the past several years. In order to assist our customers in designing power supplies with our ICs, we offer a wide range of technical documentation as well as design-support tools and services. These include PI Expert design software, which we offer free of charge, and our transformer sample service. We also continue to introduce more advanced products that make our solutions more cost-effective and easier for designers to use.

We believe that the increasing importance of energy-efficiency as a design criterion for power supplies could help accelerate the rate of adoption of our technology by the power-supply industry, and represents an important opportunity for us to increase the penetration rate of our products. This trend is predominantly the result of the emergence of energy-efficiency standards that encourage, or in some cases mandate, the design of more energy-efficient electronic products. Power supplies built with legacy technologies such as line-frequency transformers are often unable to meet these standards cost-effectively. Most notably, the California Energy Commission has introduced mandatory standards governing the energy efficiency of virtually all external power supplies; these standards became effective in 2007. These standards are scheduled to become effective on a nationwide basis in July 2008 as a result of the Energy Independence and Security Act of 2007.

Our net revenues were \$191.0 million, \$162.4 million and \$143.1 million in 2007, 2006 and 2005, respectively. The growth of revenue in each of these years primarily reflects the increased penetration of our products into our addressable market. However, we believe that our revenue growth in all three years was negatively impacted by unfair competition from products that we believe infringed several of our patents, and that in the absence of the infringing products, our revenues would have grown more rapidly in each of those years. We have taken action against these products by undertaking litigation against three of our competitors, Fairchild Semiconductor, System General Corp., and BCD Semiconductor Manufacturing Limited, as described in Part I, Item 3 of this Annual Report on Form 10-K.

Our top ten customers, including distributors that resell to OEMs and merchant power supply manufacturers, accounted for 62%, 58% and 69% of our net revenues for 2007, 2006 and 2005, respectively. In 2007 and 2006 our top customer, a distributor, accounted for approximately 23% of our net revenues in each year. In 2005, our top two customers, both distributors, collectively accounted for 37% of our net revenues. In 2007, 2006 and 2005, international sales (meaning sales outside of North and South America) comprised 95%, 93% and 93%, respectively, of our net revenues.

Our gross profit, defined as net revenues less cost of revenues, was \$103.5 million, or 54% of net revenues, in 2007, compared to \$88.6 million, or 55% of net revenues, in 2006 and \$70.1 million, or 49% of net revenues, in 2005. Because our industry is intensely price-sensitive, our gross margin, which is gross profit divided by net revenues, is subject to change based on the relative pricing of solutions that compete with ours. Also, because we purchase a large percentage of our wafers from foundries located in Japan, our gross margin is influenced by fluctuations in the exchange rate between the U.S. dollar and the Japanese yen. All else being equal, a 10% change in the value of the U.S. dollar compared to the Japanese yen would result in a corresponding change in our gross margin of approximately one percentage point.

In recent years we have employed a number of tactics in an effort to maintain or, when possible, improve our gross margin. These include reducing the cost of producing our ICs through the implementation of more advanced manufacturing processes, the migration of our testing operations to offshore sub-contractors, and the negotiation of more favorable prices from our suppliers. We also seek to increase the value of our products to our customers through the inclusion of more advanced features and functionality. Finally, we have made an effort to market our products to smaller, less price-sensitive customers. Through this combination of methods, we have generally succeeded in improving our gross margin in the recent past. Our gross margin may fluctuate in 2008 depending on a variety of factors such as the intensity of competition, the cost of manufacturing our products, the mix of high- and low-volume orders comprising our revenue, and the exchange rate between the U.S. dollar and the Japanese yen.

Total operating expenses in 2007, 2006 and 2005 were \$77.7 million, \$84.8 million and \$51.1 million, respectively. The decrease in operating expenses in 2007 compared to 2006 was driven primarily by a reduction in expenses stemming from the special investigation of our practices for granting stock options, and the related restatement of our historical financial statements. These expenses totaled approximately \$5.4 million in 2007 and \$13.7 million in 2006. The increase in operating expenses in 2007 and 2006 compared to 2005 was due primarily to the implementation of SFAS No. 123(R), which requires the recognition of expenses related to stock-based compensation. In addition, in 2007 we had a write off of in-process research and development of \$1.4 million, related to our acquisition of Potentia. For 2008, we expect our operating expenses to decrease compared to 2007 due primarily to the conclusion of the special investigation and the related restatement of our financial statements.

Our quarterly and annual operating results are volatile and difficult to predict. Our business is characterized by short-term orders and short customer lead times, and a high percentage of our revenue comes from “turns business,” or orders booked and shipped within the same period. Customers typically can cancel or reschedule orders without significant penalty. We plan our production and inventory levels based on internal forecasts of customer demand, which is highly unpredictable and can fluctuate substantially. As a result, our quarterly and annual operating results may fluctuate significantly in the future.

Critical Accounting Policies and Estimates

The preparation of financial statements and related disclosures in conformity with accounting principles generally accepted in the United States of America requires management to make estimates and assumptions that affect the reported amounts of assets and liabilities and disclosures of contingent assets and liabilities at the date of the financial statements and the reported amounts of revenues and expenses during the reporting period. On an ongoing basis, we evaluate our estimates, including those listed below. We base our estimates on historical facts and various other assumptions that we believe to be reasonable at the time the estimates are made. Actual results could differ from those estimates.

Our critical accounting policies are as follows:

- revenue recognition;
- stock-based compensation;
- estimating sales returns and allowances;
- estimating distributor pricing credits;
- estimating allowance for doubtful accounts;
- estimating write-downs for excess and obsolete inventory;
- income taxes; and
- goodwill and intangible assets.

Our critical accounting policies are both important to the portrayal of our financial condition and results of operations, and require us to make judgments and estimates about matters that are inherently uncertain. A brief description of these critical accounting policies is set forth below. For more information regarding our accounting policies, see Note 2, “Summary of Significant Accounting Policies,” in our notes to consolidated financial statements.

Revenue recognition

Product revenues consist of sales to OEMs, merchant power supply manufacturers and distributors. Shipping terms to our international OEMs and merchant power supply manufacturers from our facility in California are “delivered at frontier,” commonly referred to as DAF. As such, title to the product passes to the customer when the shipment reaches the destination country and revenue is recognized upon the arrival of our product in that country. Beginning in December 2005, shipping terms to our international OEMs and merchant power supply manufacturers shipped from our facilities outside of the United States are “EX Works” (EXW), meaning that title to the product transfers to our customer upon shipment from our foreign warehouses. Shipments to North and South American OEMs and merchant power supply manufacturers are “FOB-point of origin,” meaning that revenue is recognized upon shipment, which is when title is passed to the customer.

Historically, between one-half and two-thirds of our total sales have been made to distributors pursuant to agreements that allow certain rights of return on our products held by these distributors. As a result, we defer the recognition of revenue and the costs of revenues derived from sales to distributors until such distributors resell our products to their customers. We determine the amounts to defer based on the level of actual inventory on hand at our distributors as well as inventory that is in transit to them. The gross profit that is deferred as a result of this policy is reflected as “deferred income on sales to distributors” in our consolidated balance sheets.

Stock-based compensation

We adopted SFAS No. 123(R), *Share-Based Payment*, effective January 1, 2006. Under the provisions of SFAS No. 123(R), we recognize the fair value of stock-based compensation in financial statements over the requisite service period of the individual grants, which generally equals a four year vesting period. We have elected the modified prospective transition method for adopting SFAS No. 123(R), under which the provisions of SFAS No. 123(R) apply to all awards granted or modified after the date of adoption. The unrecognized expense of awards not yet vested at the date of adoption is recognized in our financial statements in the periods after the date of adoption using the same value determined under the original provisions of SFAS No. 123, *Accounting for Stock-Based Compensation*. We recognize compensation expense for the stock option awards granted subsequent to December 31, 2005 on a straight-line basis over the requisite service period. We use estimates in determining the fair value of these awards. Changes in these estimates could result in changes to our compensation charges. In the fiscal year 2005, we elected to follow Accounting Principles Board Opinion (APB) No. 25, *Accounting for Stock Issued to Employees*, and related interpretations, in accounting for employee stock options rather than the alternative fair value method allowed for by SFAS No. 123. See Note 5, "Stockholders' Equity," in our notes to consolidated financial statements.

As discussed in our Annual Report on Form 10-K for the year ended December 31, 2005, a Special Committee of the board of directors conducted an internal investigation of our practices related to stock option grants to officers, directors and employees, and related matters, and concluded that, among other things, the recorded grant dates for certain option grants should not be relied upon. After receiving the Special Committee's conclusions and consistent with those conclusions, we reviewed stock option grants during the period from 1998 through June 2006, resulting in our recognizing additional stock-based compensation expense with respect to certain of these grants. Although we determined that the measurement dates for certain stock option grants differed from the recorded grant dates for such grants, in some instances we were only able to locate sufficient evidence to identify the measurement date described in APB 25, the first date on which both the number of shares that an individual employee was entitled to receive and the exercise price were known, within a range of possible dates. As a result, we developed a methodology to establish the revised measurement date primarily by using communication dates as our estimate of the first date on which both the number of shares that an individual employee was entitled to receive and the exercise price were known with finality. This methodology resulted in our incurring additional aggregate pre-tax APB 25 stock-based compensation charges relating to 2005 of \$3.1 million. If we had used a variation of this methodology, using either the latest date ("latest date") an option in a group of options was recorded or the earliest date ("earliest date") a stock option agreement was returned to us from a group of options other than new hire non-officer employee options (and excluded outliers, consistent with the application of our methodology), the aggregate pre-tax APB stock-based compensation charges relating to 2005 would have been \$2.8 million (latest date) and \$3.2 million (earliest date). Please see our Annual Report on Form 10-K for the year ended December 31, 2005, for a full discussion of this methodology.

Estimating sales returns and allowances

Net revenue consists of product revenue reduced by estimated sales returns and allowances. To estimate sales returns and allowances, we analyze, both when we initially establish the reserve, and then each quarter when we review the adequacy of the reserve, the following factors: historical returns, current economic trends, levels of inventories of our products held by our distributor customers, and changes in customer demand and acceptance of our products. This reserve represents a reserve of the gross margin on estimated future returns and is reflected as a reduction to accounts receivable in the consolidated balance sheets. Increases to the reserve are recorded as a reduction to net revenue equal to the expected customer credit memo and a corresponding credit is made to cost of revenues equal to the estimated cost of the product to be returned. The net difference, or gross margin, is recorded as an addition to the reserve. Because the reserve for sales returns and allowances is based on our judgments and estimates, particularly as to future customer demand and level of acceptance of our products, our reserves may not be adequate to cover actual sales returns and other allowances. If our reserves are not adequate, our future net revenues and cost of revenues could be adversely affected.

Estimating distributor pricing credits

Historically, between one-half and two-thirds of our total sales have been made to distributors. Frequently, distributors need a cost lower than the standard distribution price to win business. After the distributor ships product to its customer under an approved transaction, the distributor submits a “ship and debit” claim to us to adjust its cost from the standard price to the approved lower price. After verification by us, a credit memo is issued to the distributor to adjust the sell-in price from the standard distribution price to the approved lower price. We maintain a reserve for these credits that appears as a reduction to accounts receivable in our consolidated balance sheets. Any increase in the reserve results in a corresponding reduction in our net revenues. To establish the adequacy of our reserves, we analyze historical ship and debit amounts and levels of inventory in the distributor channels. If our reserves are not adequate, our net revenues could be adversely affected.

From time to time we reduce our distribution list prices. We give our distributors protection against these price declines in the form of credits on products they hold in inventory. These credits are referred to as “price protection.” Since we do not recognize revenue until the distributor sells the product to its customers, we generally do not need to provide reserves for price protection. However, in rare instances we must consider price protection in the analysis of reserve requirements, as there may be a timing gap between a price decline and the issuance of price protection credits. If a price protection reserve is required, we will maintain a reserve for these credits that appears as a reduction to accounts receivable in our consolidated balance sheets. Any increase in the reserve results in a corresponding reduction in our net revenues. We analyze distribution price declines and levels of inventory in the distributor channels in determining the reserve levels required. If our reserves are not adequate, our net revenues could be adversely affected.

Estimating allowance for doubtful accounts

We maintain an allowance for losses we may incur as a result of our customers’ inability to make required payments. Any increase in the allowance for doubtful accounts results in a corresponding increase in our general and administrative expenses. In establishing this allowance, and in evaluating the adequacy of the allowance each quarter, we analyze historical bad debts, customer concentrations, customer credit-worthiness, current economic trends and changes in our customer payment terms. If the financial condition of one or more of our customers deteriorates, resulting in their inability to make payments, or if we otherwise underestimate the losses we incur as a result of our customers’ inability to pay us, we could be required to increase our allowance for doubtful accounts which could adversely affect our operating results.

Estimating write-downs for excess and obsolete inventory

When evaluating the adequacy of our valuation adjustments for excess and obsolete inventory, we identify excess and obsolete products and also analyze historical usage, forecasted production based on demand forecasts, current economic trends, and historical write-offs. This write-down is reflected as a reduction to inventory in the consolidated balance sheets, and an increase in cost of revenues. If actual market conditions are less favorable than our assumptions, we may be required to take additional write-downs, which could adversely impact our cost of revenues and operating results.

Income taxes

Income tax expense is an estimate of current income taxes payable or refundable in the current fiscal year based on reported income before income taxes. Deferred income taxes reflect the effect of temporary differences and carry-forwards that are recognized for financial reporting and income tax purposes. These deferred taxes are measured by applying currently enacted tax laws. We recognize valuation allowances, which reduce deferred tax assets to the amount that we estimate will be more likely than not realized, based upon available evidence and management judgment. We limit the deferred tax assets recognized related to certain stock based compensation of our officers to amounts that we estimate will be deductible in future periods based upon the provisions of the

Internal Revenue Code Section 162(m). As of December 31, 2007, we had not recorded any valuation allowance against any of our deferred tax assets. In the event that we determine, based on available evidence and management judgment, that all or part of the net deferred tax assets will not be realized in the future, we would record a valuation allowance in the period the determination is made. In addition, the calculation of tax liabilities involves significant judgment in estimating the impact of uncertainties in the application of complex tax laws. Resolution of these uncertainties in a manner inconsistent with our expectations could have a material impact on our results of operations and financial position.

In July 2006, FASB issued FIN 48, which creates a single model to address accounting for uncertainty in tax positions by prescribing a minimum recognition threshold that a tax position is required to meet before being recognized in the financial statements. FIN 48, which we adopted effective January 1, 2007, establishes a two-step approach for evaluating tax positions. The first step, recognition, occurs when a company concludes (based solely on the technical aspects of the tax matter) that a tax position is more likely than not to be sustained on examination by a taxing authority. The second step, measurement, is only considered after step one has been satisfied and measures any tax benefit at the largest amount that is deemed more likely than not to be realized upon ultimate settlement of the uncertainty. Tax positions that fail to qualify for initial recognition are recognized in the first subsequent interim period that they meet the more likely than not standard, when they are resolved through negotiation or litigation with the taxing authority or upon the expiration of the statute of limitations. The application of tax laws and regulations is subject to legal and factual interpretation, judgment and uncertainty. Tax laws and regulations themselves are subject to change as a result of changes in fiscal policy, changes in legislation, evolution of regulations and court rulings. Therefore, the actual liability for U.S. or foreign taxes may be materially different from our estimates, which could result in the need to record additional tax liabilities or potentially to reverse previously recorded tax liabilities.

Goodwill and intangible assets

As of December 31, 2007 we recorded goodwill in the amount of \$1.8 million as a result of our acquisition of Potentia Semiconductor Corporation, see Note 8 “Acquisition” in our notes to consolidated financial statements for details on our acquisition. In accordance with SFAS No. 142, *Goodwill and Other Intangible Assets*, we will evaluate goodwill for impairment on an annual basis, or as other indicators exist for a potential impairment. The provisions of SFAS No. 142 require that we perform a two-step impairment test. In the first step, we will compare the implied fair value of our single reporting unit to its carrying value, including goodwill. If the fair value of our reporting unit exceeds the carrying amount no impairment adjustment is required. If the carrying amount of our reporting unit exceeds the fair value, step two will be completed to measure the amount of goodwill impairment loss, if any exists. If the carrying value of our single reporting unit’s goodwill exceeds its implied fair value, then we record an impairment loss equal to the difference, but not in excess of the carrying amount of the goodwill.

SFAS No 142. also requires that intangible assets with estimable useful lives be amortized over their respective estimated useful lives, and reviewed for impairment in accordance with SFAS No. 144, *Accounting for the Impairment or Disposal of Long-Lived Assets*. We review long-lived assets, such as acquired intangibles and property and equipment, for impairment whenever events or changes in circumstances indicate that the carrying amount of an asset may not be recoverable. We measure recoverability of assets to be held and used by a comparison of the carrying amount of an asset to estimate undiscounted future cash flows expected to be generated by the asset. If the carrying amount of an asset exceeds its estimated future cash flows, we recognize an impairment charge by the amount by which the carrying amount of the asset exceeds the fair value of the asset. We would present assets to be disposed of separately in the balance sheet and would report the assets at the lower of the carrying amount or fair value less costs to sell, and would no longer depreciate the assets and liabilities of a disposed group classified as held for sale. Currently, we have no impairment of long-lived assets nor any assets held for disposal.

Results of Operations

The following table sets forth certain operating data in dollars, as a percentage of total net revenues and the increase (decrease) over prior periods for the periods indicated (in thousands).

	Year Ended December 31,							
	Amount			Percent of Net Revenues			Increase (Decrease)	
	2007	2006	2005	2007	2006	2005	2007 vs. 2006	2006 vs. 2005
Total net revenues	\$191,043	\$162,403	\$143,071	100.0%	100.0%	100.0%	\$ 28,640	\$ 19,332
Cost of revenues	87,558	73,794	72,979	45.8	45.4	51.0	13,764	815
Gross profit	103,485	88,609	70,092	54.2	54.6	49.0	14,876	18,517
Operating expenses:

Net income	<u>\$ 26,624</u>	<u>\$ 9,425</u>	<u>\$ 15,698</u>	<u>13.9%</u>	<u>5.8%</u>	<u>11.0%</u>	<u>\$ 17,199</u>	<u>\$ (6,273)</u>

Comparison of Years Ended December 31, 2007 and 2006

Net revenues. Net revenues consist of revenues from product sales, which are calculated net of returns and allowances, plus license fees and royalties. Net revenues increased 18% in 2007 compared to 2006. The increase in revenues for the year ended December 31, 2007, compared to 2006, was driven by increased penetration of our products across all of our major end markets, comprised of a variety of power-supply applications including cellphone chargers, desktop computers, consumer appliances and a range of industrial applications. The increase in net revenues was driven largely by sales of our LinkSwitch products, which are targeted primarily at replacing linear power supplies, as well as sales of our TinySwitch-III products, which serve a wide range of power-supply applications. The increase in net revenues was partially offset by reduced revenue from one of our major end-customers in the communications market. Manufacturers supplying power supplies to this end-customer redesigned their power supplies and in the process chose to use a competing product rather than our products. We believe this competing product is infringing on three of our patents and, accordingly, we have undertaken litigation against BCD Semiconductor Manufacturing Limited, as described in Part I, Item 3, Legal Proceedings, of this Annual Report on Form 10-K.

Our net revenue mix by product family and by the end markets served in 2007 and 2006 are as follows:

Product Family	Year Ended December 31,	
	2007	2006
TinySwitch	52%	53%
TOPSwitch	28%	36%
LinkSwitch	18%	9%
DPA-Switch	2%	2%

<u>End Market</u>	<u>Year Ended December 31,</u>	
	<u>2007</u>	<u>2006</u>
Consumer	30%	32%
Communications	27%	28%
Computer	21%	19%
Industrial electronics	15%	15%
Other	7%	6%

International revenues, comprised of sales outside of North and South America, were \$181.8 million in 2007 compared to \$150.7 million in 2006, representing approximately 95% and 93% of net revenues in those respective periods. Although the power supplies using our products are designed and distributed worldwide, most of these power supplies are manufactured by our customers in Asia. As a result, sales to this region were 81% and 78% of our net revenues for 2007 and 2006, respectively. The increase in sales to Asia as a percentage of revenues was driven primarily by the increase in sales of our LinkSwitch products to customers in the Asia region. We expect international sales to continue to account for a large portion of our net revenues.

Net product revenues for 2007 were divided 64% to distributors and 36% to OEMs and merchant power supply manufacturers, compared to 63% to distributors and 37% to OEMs and merchant power supply manufacturers in 2006. In 2007 and 2006, one customer, Avnet, a distributor of our products, accounted for approximately 23% of net revenues. No other customer accounted for 10% or more of our net revenues.

Customer demand for our products can change quickly and unexpectedly. Our customers perceive that our products are readily available and typically order only for their short-term needs. Our revenue levels are highly dependent on the amount of new orders that we receive for which product can be delivered by us within the same period. Orders that are booked and shipped within the same period are called “turns business.” Because of the uncertainty of customer demand, and the short lead-time environment and proportionally high turns business, it is difficult to predict future levels of revenues and profitability.

Gross profit. Gross profit is net revenues less cost of revenues. Our cost of revenues consists primarily of costs associated with the purchase of wafers from our contracted foundries, the assembly and packaging of our products by sub-contractors, internal labor and overhead associated with product testing performed in our own facility, and testing of packaged components performed by sub-contractors. Gross margin is gross profit divided by net revenues. The 0.4% decrease in our gross margin in 2007 compared to 2006 related primarily to the fact that our gross margin for 2006 was positively impacted by the recognition of \$3.4 million in revenues and gross profits as a result of a settlement agreement under which one of our distributors agreed to reimburse us for discrepant ship and debit requests. Going forward, we have undertaken a strategy of selectively pursuing certain high-volume design opportunities which may bring lower-than-average gross profit margins. Our overall gross profit margin may fluctuate depending on our success in winning such designs as well as our success in further reducing our manufacturing costs.

Research and development expenses. Research and development, or R&D, expenses consist primarily of employee-related expenses including stock-based compensation and expensed material and facility costs associated with the development of new processes and new products. We also record R&D expenses for prototype wafers related to new products until such products are released to production. R&D expenses increased by 3% in 2007 compared to 2006. The primary driver of the increase in R&D expenses was an increase in internal personnel and related expenses. The increase in R&D expenses reflects our accelerated investment in both new wafer manufacturing technologies and new product development. This increase was partially offset by lower stock-based compensation expense, as we issued fewer common stock options, and the issue date of such options was later in the year in 2007 compared to 2006. We expect R&D expenses to increase in 2008 primarily as a result of increased headcount related to our acquisition of Potentia Semiconductor Corporation in December 2007. See Note 8 “Acquisition” in our notes to consolidated financial statements.

Sales and marketing expenses. Sales and marketing expenses consist primarily of employee-related expenses, including stock-based compensation, commissions to sales representatives, and facilities expenses, including expenses associated with our regional sales and support offices. Sales and marketing expenses increased by 5% in 2007 compared to 2006. The increase in sales and marketing expenses was due primarily to increased headcount to increase our global sales capabilities. Expenses related to increased headcount including salaries, payroll taxes, benefits and travel increased by approximately \$1.5 million in 2007 compared to 2006. This increase was partially offset by lower stock-based compensation expense, as we issued fewer common stock options, and the issue date of such options was later in the year in 2007 compared to 2006. We expect sales and marketing expenses to increase in absolute dollars in 2008 as we continue to grow our international business, but these expenses may fluctuate as a percentage of our net revenues.

General and administrative expenses. General and administrative, or G&A, expenses consist primarily of employee-related expenses, including stock-based compensation expenses for administration, finance, human resources and general management, as well as consulting, professional services, legal and auditing expenses. G&A expenses decreased 30% in 2007 compared to 2006. The decrease was due primarily to lower expenses associated with the special investigation into our practices for granting stock options, and the related restatement of our financial statements. These expenses totaled approximately \$5.4 million in 2007 compared to approximately \$13.2 million in 2006. Also contributing to the decrease was lower stock-based compensation expense, as we issued fewer common stock options, and the issue date of such options was later in the year in 2007 compared to 2006. We expect G&A expenses to decrease in 2008 compared to 2007 due to the completion of the restatement of our financial statements in 2007. We expect this decrease to be partially offset by increased expenses related to patent litigation.

In-process research and development. In connection with our acquisition of Potentia Semiconductor Corporation, we incurred a one time charge of \$1.4 million related to in-process research and development for technology that had not reached technological feasibility. For details on our acquisition see Note 8 "Acquisition" in our notes to consolidated financial statements.

Total other income. The increase in total other income of 49% in 2007 compared to 2006 was due primarily to an increase in interest income on our cash and investment balances. Interest income grew due to an increase in total cash and investments. In 2007, total investment securities totaled \$180.0 million, and consisted of cash equivalents and short term investments, compared to \$117.0 million of cash equivalents, short term and long term investments in 2006. The increase was also attributable to a \$0.8 million reimbursement for a directors and officers liability insurance claim received in the second quarter of 2007.

Provision for income taxes. Provision for income taxes represents Federal, state and foreign taxes. We calculated our provision for income taxes to be \$7.9 million for 2007 compared to a provision of \$0.3 million for 2006. Our effective tax rate for 2007 was approximately 23%, compared to approximately 3.4% in 2006. The increase in our effective tax rate in 2007 compared to 2006 was primarily due to an increase in profit before tax driven by increased sales and a reduction in restatement costs of approximately \$8.0 million. The increase in our effective tax rate was partially offset by a decrease in the tax effect of stock-based compensation charges.

Comparison of Years Ended December 31, 2006 and 2005

Net revenues. Net revenues increased 13.5% in 2006 compared to 2005. The increase was driven primarily by penetration of our products in the industrial end market, including such applications as industrial controls, utility meters, external adapters, uninterruptible power supplies and lighting applications. The increase also resulted from increased penetration in the consumer market, including applications such as major appliances, external adapters and audio equipment, and the communications market, including applications such as voice-over-IP phones and cordless phones.

Our revenue growth in 2006 was driven by an increase in gross sales of all four of our main product families. Our net revenue also benefited from a settlement agreement under which one of our distributors agreed to reimburse us for discrepant ship and debit requests totaling approximately \$3.4 million; we received this reimbursement in April 2006.

Our net revenue mix by product family and by the end markets served in 2006 and 2005 are as follows:

<u>Product Family</u>	<u>Year Ended December 31,</u>	
	<u>2006</u>	<u>2005</u>
TinySwitch	53%	57%
TOPSwitch	36%	38%
LinkSwitch	9%	5%
DPA-Switch	2%	—%

<u>End Market</u>	<u>Year Ended December 31,</u>	
	<u>2006</u>	<u>2005</u>
Consumer	32%	30%
Communications	28%	29%
Computer	19%	23%
Industrial electronics	15%	11%
Other	6%	7%

International revenues, comprised of sales outside of the Americas, were \$150.7 million in 2006 compared to \$133.6 million in 2005, representing approximately 93% of net revenues in both periods. Although the power supplies using our products are designed and distributed worldwide, most of these power supplies are manufactured by our customers in Asia. As a result, sales to this region were 78% and 79% of our net revenues for 2006 and 2005, respectively. We expect international sales to continue to account for a large portion of our net revenues.

Net product revenues for 2006 were divided 63% to distributors and 37% to OEMs and merchant power supply manufacturers, compared to 60% to distributors and 40% to OEMs and merchant power supply manufacturers in 2005. In 2006, one customer, Avnet, a distributor of our products, accounted for approximately 23% of net revenues. In April 2006, we terminated our relationship with Synnex Technologies, a distributor, that accounted for 18% of net revenues in 2005. We have replaced this relationship with other distribution relationships, and therefore do not believe that the termination has had or will have a material impact to our business.

Gross profit. The increase in our gross margin from 2005 to 2006 was mainly due to the absorption of fixed manufacturing costs across higher volumes, higher product yields, lower test costs due to the migration of our test processes to overseas sub-contractors, and the sale of excess and obsolete inventory for which we had fully reserved. These improvements were partially offset by stock-based compensation costs recognized as a result of our adoption of SFAS No. 123(R). Stock-based compensation costs were \$1.3 million, or 0.8% of net revenues, in 2006 compared to \$0.4 million, or 0.3% of net revenues, in 2005.

Research and development expenses. Research and development, or R&D, expenses increased by 43% from 2005 to 2006. The primary driver of the increase in R&D expenses was an increase in internal personnel and related expenses. The increase in R&D expenses reflects our accelerated investment in both new wafer manufacturing technologies and new product development. In addition, R&D expenses in 2006 included \$4.3 million of employee stock-based compensation expense related to SFAS No. 123(R) compared to stock-based compensation expense of \$1.0 million in 2005.

Sales and marketing expenses. Sales and marketing expenses increased by 40% from 2005 to 2006. The increase was primarily due to stock-based compensation expenses, reflecting the implementation of SFAS No. 123(R) in the first quarter of 2006. Stock-based compensation expense included in sales and marketing expenses totaled \$5.5 million in 2006, compared to \$0.7 million in 2005. The increase was also driven by higher headcount in sales and field applications engineering to increase our global sales capabilities.

General and administrative expenses. General and administrative, or G&A, expenses increased 121% from 2005 to 2006. The increase was due primarily to expenses associated with the special investigation into our practices for granting stock options, and the related restatement of our financial statements. These expenses totaled approximately \$13.2 million in 2006, compared to zero in 2005. Also contributing to the increase was higher stock-based compensation expense reflecting the implementation of SFAS No. 123(R) in the first quarter of 2006. Stock-based compensation expense included in G&A expenses totaled \$4.4 million in 2006, compared to \$1.1 million in 2005. Expenses associated with our patent-infringement litigation against Fairchild Semiconductor and System General Corp., as described in Part I, Item 3 Legal Proceedings, were \$7.0 million in 2006 and \$5.5 million in 2005.

Total other income. The increase in total other income from 2005 to 2006 was due to an increase in interest income on our cash and investment balances. Interest income, which consists primarily of income earned on short-term and long-term investments, grew primarily due to an increase in our average interest rate from 4.1% at December 31, 2005 to 5.4% at December 31, 2006.

Provision for income taxes. We calculated our provision for income taxes to be \$0.3 million for 2006 compared to a provision of \$6.5 million for 2005. Our effective tax rate for 2006 was approximately 3.4% compared to approximately 29% in 2005. The decrease in our effective tax rate in 2006 compared to 2005 was primarily due to the increase in costs in higher income tax jurisdictions incurred in connection with our previously announced investigation into our historical stock option practices and the resulting restatements of our prior financial statements, and higher profitability in lower income tax jurisdictions.

Liquidity and Capital Resources

Since our initial public offering of common stock in December 1997, our principal source of funding has been cash from our operations.

We had approximately \$205.5 million in cash, cash equivalents and short-term investments (including \$1.3 million of restricted cash) at December 31, 2007. We had \$132.7 million at December 31, 2006, and \$130.5 million at December 31, 2005, in cash, cash equivalents, short-term and long-term investments (including \$1.3 million of restricted cash in 2006). On October 26, 2006, we entered into a security agreement with the Union Bank of California, whereby we agreed to maintain \$1.3 million in an interest-bearing certificate of deposit with the bank. The purpose of this agreement is to secure commercial letters of credit and standby letters of credit up to the deposit amount. This agreement remains in effect until cancellation of our letter of credit. As of December 31, 2007, we have no other credit facilities.

As of December 31, 2007, 2006 and 2005 we had working capital, defined as current assets less current liabilities, of approximately \$215.0 million, \$133.6 million and \$132.8 million, respectively.

Our operating activities generated cash of \$62.6 million, \$29.2 million and \$36.0 million in the years ended December 31, 2007, 2006 and 2005, respectively. In each of these years, cash was primarily generated from operating activities in the ordinary course of business.

Cash provided by operating activities totaled \$62.6 million in the year ended December 31, 2007. Our net income accounted for \$26.6 million of this amount. We recognized \$13.7 million in stock-based compensation and related expenses, which reduced our net income significantly but was not a use of cash. We also recognized \$8.2 million in depreciation and amortization expenses, which were also non-cash expenses. In addition we

recognized a tax benefit of \$3.5 million associated with employee stock plans. Changes in operating assets and liabilities included a decrease in inventories of \$8.6 million reflecting the streamlining of our supply chain. Other factors increasing our cash provided by operating activities included increased taxes payable and other accrued liabilities of \$3.1 million, due primarily to increased taxes recorded on higher income and the impact of adopting FIN 48 in 2007. In addition, accounts payable increased \$2.5 million, due primarily to purchases of test equipment and raw materials for the production of our products. These increases were partially off-set by an increase in accounts receivable of \$3.7 million, primarily reflecting growth in our net revenues.

Cash provided by operating activities totaled \$29.2 million in the year ended December 31, 2006. Our net income accounted for \$9.4 million of this amount. We recognized \$15.5 million in stock-based compensation expenses, which reduced our net income significantly but was not a use of cash. We also recognized \$7.1 million in depreciation and amortization expenses, which were also non-cash expenses. Increases in inventories resulted in a \$10.1 million use of cash. This increase primarily reflected higher levels of production in anticipation of future growth in sales. Also, our sales in the fourth quarter of 2006 were less than expected, reflecting a broad slowdown in the analog semiconductor industry. Higher taxes payable and other accrued liabilities largely offset the cash impact of the increase in inventories, such that the overall net change in operating assets and liabilities did not have a significant impact on cash from operations.

In 2005, cash generated by operating activities totaled \$36.0 million. Our net income accounted for \$15.7 million of this total, while depreciation and amortization, which are non-cash expenses, totaled \$6.3 million. Lower inventories, reflecting decreased purchases of raw material components, resulted in a \$7.5 million source of cash, while an increase in taxes payable and other accrued liabilities, primarily due to an increase in income taxes related to lower income in lower-tax-rate foreign jurisdictions, resulted in a \$5.2 million source of cash.

Our investing activities for the year ended December 31, 2007 resulted in a \$95 million use of cash. This use of cash included net purchases totaling \$79 million of securities held to maturity, property and equipment purchases of \$11.0 million, and the acquisition of Potentia Semiconductor Corporation for \$5.5 million, including closing costs. Refer to Note 8 in our notes to consolidated financial statements for details on our acquisition. We do not believe the current market instability will have a significant impact on our investment portfolio, as of December 31, 2007, we did not hold asset backed or mortgage backed securities.

Our investing activities for the year ended December 31, 2006 resulted in a \$0.3 million use of cash, as net proceeds totaling \$14.1 million from the sale and purchase of securities held to maturity were offset by purchases of property and equipment of \$10.1 million, the acquisition of a technology license from our foundry OKI for \$3.0 million, and the purchase of a \$1.3 million certificate of deposit as part of a security agreement related to standby letters of credit used for purchases of silicon wafers.

Our investing activities for the year ended December 31, 2005 resulted in a \$7.8 million use of cash, which was driven primarily by the issuance of a \$10.0 million promissory note to a supplier, as described in Note 9, "Loan to Supplier," in our notes to consolidated financial statements, plus purchases of property and equipment totaling \$3.2 million and the acquisition of technology for \$1.1 million. These uses of cash were offset in part by net proceeds of \$6.5 million from short-term and long-term investments.

Our financing activities in 2007 resulted in net cash proceeds of \$25.8 million. This was driven primarily by proceeds of \$24.6 million from the issuance of common stock through the exercise of stock options. In addition there was an excess tax benefit from stock options exercised of \$1.2 million. Our financing activities in 2006 resulted in a net use of cash totaling \$13.9 million, driven primarily by share repurchases of \$19.6 million offset by proceeds of \$5.6 million from the issuance of common stock. Our financing activities in 2005 resulted in a net use of cash totaling \$25.8 million, driven primarily by share repurchases of \$33.7 million. This use of cash was partially offset by receipts of \$7.9 million from the issuance of common stock through the exercise of stock options and purchases through our employee stock purchase plan.

On October 20, 2004, we announced that our board of directors had authorized the repurchase of up to \$40 million of our common stock. From inception of the stock repurchase program in October 2004 through June 30, 2005, we repurchased 2,033,270 shares for approximately \$40 million. On October 19, 2005, we announced that our board of directors had authorized a second stock repurchase program of up to \$25 million of our common stock. From inception of this second stock repurchase plan through June 2006, we purchased a total of 1,334,216 shares for \$25 million. In February 2008, our board of directors authorized a new stock repurchase program of up to \$50 million of our common stock. Stock repurchase activity under this program commenced in February 2008.

During 2007, a significant portion of our positive cash flow was generated by our operations. If our operating results deteriorate in future periods, our ability to generate positive cash flow from operations may be jeopardized. In that case, we may be forced to use our cash, cash equivalents and short-term investments to fund our operations. We believe that cash generated from operations, together with existing sources of liquidity, will satisfy our projected working capital and other cash requirements for at least the next 12 months.

Off-Balance Sheet Arrangements

As of December 31, 2007 and 2006, we did not have any off-balance sheet arrangements or relationships with unconsolidated entities or financial partnerships, such as entities often referred to as structured finance or special purposes entities, which are typically established for the purpose of facilitating off-balance sheet arrangements or other contractually narrow or limited purposes.

Contractual Obligations

As of December 31, 2007, we had the following contractual obligations and commitments, including leases related to the acquisition of Potentia Semiconductor Corporation, see Note 8 "Acquisition" in our notes to consolidated financial statements for details. (in thousands):

	Payments due by period				
	Total	Less than 1 Year	1-3 Years	4-5 Years	Over 5 Years
Purchase obligations	\$16,437	\$16,437	\$—	\$—	\$—
Operating lease obligations	1,587	752	604	109	122
Total	<u>\$18,024</u>	<u>\$17,189</u>	<u>\$604</u>	<u>\$109</u>	<u>\$122</u>

As of December 31, 2007, our total amount of unrecognized tax benefits was \$19.1 million, and it was classified as deferred tax assets and long-term income taxes payable in our condensed consolidated balance sheet. The settlement period for our income tax liabilities cannot be determined; however, they are not expected to be due within the next twelve months.

Item 7A. Quantitative and Qualitative Disclosures About Market Risk.

Interest Rate Risk. Our exposure to market risk for changes in interest rates relates primarily to our investment portfolio. We consider cash invested in highly liquid financial instruments with a remaining maturity of three months or less at date of purchase to be cash equivalents. Investments in highly liquid financial instruments with maturities greater than three months but not longer than twelve months from the balance sheet date are classified as short-term investments. Investments in highly liquid financial instruments with maturities greater than twelve months from the balance sheet date are classified as long-term investments. We do not use derivative financial instruments in our investment portfolio to manage our interest rate risk, foreign currency risk, or for any other purpose. We invest in high-credit quality issuers and, by policy, limit the amount of credit exposure to any one issuer. As stated in our policy, we seek to ensure the safety and preservation of our invested

principal funds by limiting default risk, market risk and reinvestment risk. We mitigate default risk by investing in safe and high-credit quality securities and by constantly positioning our portfolio to respond appropriately to a significant reduction in a credit rating of any investment issuer, guarantor or depository. The portfolio includes only marketable securities with active secondary or resale markets to facilitate portfolio liquidity. We do not hold any instruments for trading purposes. At December 31, 2007 and 2006 we held primarily cash equivalents and short-term investments with fixed interest rates and with maturity dates of less than twelve months.

The table below presents the carrying value and related weighted-average interest rates for our investment portfolio at December 31, 2007 and 2006. Carrying value approximates fair market value at December 31, 2007 and 2006 (in thousands, except weighted-average interest rates).

	December 31, 2007		December 31, 2006	
	Carrying Value	Weighted-Average Interest Rate	Carrying Value	Weighted-Average Interest Rate
Investment Securities Classified as Cash Equivalents:				
Commercial paper	\$ 93,888	5.20%	\$110,922	5.43%
Investment Securities Classified as Short-term Investments:				
U.S. government securities	2,000	4.60%	2,500	4.63%
U.S. corporate securities	83,820	5.05%	6	—
Total	85,820	5.03%	2,506	4.63%
Investment Securities Classified as Long-term Investments:				
U.S. government securities	—	—	3,999	4.88%
Total investment securities	\$179,708	5.12%	\$117,427	5.40%

These securities are subject to market interest rate risk and will vary in value as market interest rates fluctuate. To minimize market risk, most of our investments subject to market risk mature in less than one year, and therefore if market interest rates were to increase or decline by 10% from interest rates as of December 31, 2007 and 2006, the increase or decline in the fair market value of our portfolio on these dates would not have been material.

Foreign Currency Exchange Risk. We transact business in various foreign countries. Our primary foreign currency cash flows are in Asia and Western Europe and involve contracts with two of our suppliers (Matsushita and OKI). Currently, we do not employ a foreign currency hedge program utilizing foreign currency forward exchange contracts; however, the contract prices to purchase wafers from Matsushita and OKI are denominated in Japanese yen and both agreements allow for mutual sharing of the impact of the exchange rate fluctuation between Japanese yen and the U.S. dollar. One of our other major suppliers, Epson, contracts prices to purchase wafers in U.S. dollars, however, the agreement with Epson also allows for mutual sharing of the impact of the exchange rate fluctuation between Japanese yen and the U.S. dollar. Nevertheless, changes in the exchange rate between the U.S. dollar and the Japanese yen could subject our gross profit and operating results to the potential for material fluctuations.

It has been and currently is our practice to maintain a Japanese yen account with a U.S. bank in an amount that generally approximates expected payments to our wafer suppliers in Japan. This practice acts to minimize the impact of changes in the yen. In addition, the yen and the U.S. dollar historically have not fluctuated greatly from year to year; and typically we have not had a significant amount of foreign currency at risk. In light of these facts, we do not believe we have a material foreign currency exchange risk.

Item 8. Financial Statements and Supplementary Data.

The financial statements and supplementary data required by this item are set forth at the pages indicated at Item 15(a).

Item 9. Changes in and Disagreements with Accountants on Accounting and Financial Disclosure.

Not applicable.

Item 9A. Controls and Procedures.**Limitations Regarding the Effectiveness of Control Systems**

It should be noted that any control system, no matter how well designed and operated, can provide only reasonable assurance to the tested objectives. The design of any control system is based in part upon certain assumptions about the likelihood of future events, and there can be no assurance that any design will succeed in achieving its stated goals under all potential future conditions, regardless of how remote. The inherent limitations in any control system include the realities that judgments related to decision-making can be faulty, and that reduced effectiveness in controls can occur because of simple errors or mistakes. Due to the inherent limitations in a cost-effective control system, misstatements due to error may occur and may not be detected.

Conclusion Regarding the Effectiveness of Disclosure Controls and Procedures

Under the supervision and with the participation of our management, including our chief executive officer and chief financial officer, we conducted an evaluation of the effectiveness of the design and operation of our disclosure controls and procedures, as defined in Rules 13a-15(e) and 15d-15(e) under the Securities Exchange Act of 1934 (“Exchange Act”), as of the end of the period covered by this report, December 31, 2007. Disclosure controls and procedures under the Exchange Act mean the controls and other procedures that are designed to provide reasonable assurance that the information required to be disclosed by Power Integrations in the reports that we file or submit under the Exchange Act is recorded, processed, summarized and reported within the time period specified in the Security and Exchange Commissions, or SEC’s, rules and forms. Disclosure controls and procedures include, without limitation, controls and procedures designed to provide reasonable assurance that information required to be disclosed by Power Integrations in the reports that we file or submit under the Exchange Act is accumulated and communicated to Power Integrations’ management, including our chief executive officer and chief financial officer, or persons performing similar functions, as appropriate to allow timely decisions regarding required disclosure.

Based on this evaluation, our chief executive officer and chief financial officer concluded that our disclosure controls and procedures were effective as of December 31, 2007. In making this conclusion, we had considered, among other factors, the remediation of our previously identified material weaknesses described in the following paragraphs related to accounting for stock grants, income tax accounting and the application of generally accepted accounting principles to non-routine transactions.

Internal Control Over Financial Reporting*Management’s Annual Report on Internal Control over Financial Reporting*

Our management is responsible for establishing and maintaining adequate internal control over financial reporting as defined in Exchange Act Rules 13a-15(f) and 15d-15(f). Under the Exchange Act, internal control over financial reporting means a process designed by, or under the supervision of, the principal executive and principal financial officers, or persons performing similar functions, and effected by the board of directors, management and other personnel, to provide reasonable assurance regarding the reliability of financial reporting and the preparation of financial statements for external purposes in accordance with generally accepted

accounting principles and includes those policies and procedures that: (1) pertain to the maintenance of records that in reasonable detail accurately and fairly reflect the transactions and dispositions Power Integrations' assets; (2) provide reasonable assurance that transactions are recorded as necessary to permit preparation of financial statements in accordance with generally accepted accounting principles, and that our receipts and expenditures are being made only in accordance with authorizations of our management and directors; and, (3) provide reasonable assurance regarding prevention or timely detection of unauthorized acquisition, use or disposition of our assets that could have a material effect on our consolidated financial statements.

Under the supervision and with the participation of our management, including our chief executive officer and chief financial officer, we conducted an evaluation of the effectiveness of our internal control over financial reporting based on the framework in *Internal Control—Integrated Framework* issued by the Committee of Sponsoring Organizations of the Treadway Commission. Our management has concluded that, as of December 31, 2007, our internal control over financial reporting was effective based on these criteria.

Remediation of Material Weaknesses

Remediation of our Material Weakness Related to Stock-Based Compensation

We had previously concluded that a material weakness in our internal control over financial reporting related to stock-based compensation existed as of December 31, 2006, as reported in our Annual Report on Form 10-K for the year ended December 31, 2006. We did not have sufficient controls and procedures in place to cause us to have a less than a reasonable possibility that a material misstatement would not be prevented or detected in the consolidated financial statements and related disclosures from the application of APB 25, SFAS No. 123 and SFAS No. 123(R), which replaced APB 25 and SFAS 123 effective January 1, 2006.

Throughout the year ended December 31, 2007, we have enhanced our control activities related to accounting for stock-based compensation, and we have engaged the services of an external specialist in stock-based compensation to assist us in the accounting for stock-based compensation as per the requirements of SFAS No. 123R. In addition, prior to the beginning of 2007, we had engaged our corporate counsel to revise our policies and procedures surrounding the administration of our stock option grants to our employees that, along with other enhancements that we have now established related to the granting and accounting for stock options, strengthened our internal control over financial reporting related to stock-based compensation.

During the fourth quarter of 2007, management evaluated and tested these controls and determined the material weakness was remediated.

Remediation of our Material Weakness Related to Income Tax Accounting

We had previously concluded that a material weakness in our internal control over financial reporting related to tax accounting existed as of December 31, 2006, as reported in our Annual Report on Form 10-K for the year ended December 31, 2006. We did not have sufficient controls and procedures in place to cause us to have less than a reasonable possibility that a material misstatement would not be prevented or detected in the consolidated financial statements and related disclosures from the accounting and review of our income taxes payable, deferred income tax assets and liabilities, and the related tax provision.

Throughout the year ended December 31, 2007, management improved our process related to tax accounting with the assistance of our third party tax accounting firm, by engaging more senior and qualified staff, and enhancing the administrative process, including detailed checklists, and quarterly documentation by management and our third party tax accounting firm of changes in compliance and tax structure.

During the fourth quarter of 2007, management evaluated and tested these controls and determined the material weakness was remediated.

Remediation of our Material Weakness Relating to the Application of Generally Accepted Accounting Principles to Non-Routine Transactions

We had previously concluded that a material weakness in our internal control over financial reporting related to the application of generally accepted accounting principles to non-routine transactions existed as of December 31, 2006, as reported in our Annual Report on Form 10-K for the year ended December 31, 2006. We did not have sufficient controls and procedures in place to cause us to have a less than a reasonable possibility that a material misstatement would not be prevented or detected in the consolidated financial statements and related disclosures from the application of generally accepted accounting principles to material, non-routine, non-systematic transactions.

Throughout the year ended December 31, 2007, to strengthen our processes relating to the accounting for material, non-routine, non-systematic transactions in accordance with generally accepted accounting principles, we have implemented a process to identify and research those items and engage technical expertise, if necessary, to provide reasonable assurance that the transactions are accounted for in accordance with generally accepted accounting principles. Our policy requires the documentation and evaluation of complex and unusual transactions which are material either by the size or the nature of the transaction. In conjunction with this policy, we have implemented more rigorous controls for ensuring that those transactions which involve a significant level of management judgment or which by the nature of the transactions rise to a level requiring communication to the Audit Committee are, in fact, communicated to the Audit Committee on a timely basis.

During the fourth quarter of 2007, management evaluated and tested these controls and determined the material weakness was remediated.

Changes in Internal Control over Financial Reporting

In the fourth quarter ended December 31, 2007, the changes in our internal control over financial reporting relate primarily to our remediation efforts for the three material weaknesses mentioned above. This consisted primarily of the process documentation and testing of our controls related to accounting for stock-based compensation, income tax accounting and the application of generally accepted accounting principles to non-routine transactions. Other than the remediation efforts related to our previously reported material weaknesses described above, there have been no changes that have materially affected, or are reasonably likely to materially affect, our internal control over financial reporting during the quarter ended December 31, 2007.

Deloitte & Touche LLP, the independent registered public accounting firm that audited the consolidated financial statements included in this Annual Report on Form 10-K, has issued an audit report on our internal control over financial reporting. This report is included herein.

REPORT OF INDEPENDENT REGISTERED PUBLIC ACCOUNTING FIRM

To the Board of Directors and Stockholders of Power Integrations, Inc.:

We have audited the internal control over financial reporting of Power Integrations, Inc. and subsidiaries (collectively the Company) as of December 31, 2007, based on the criteria established in *Internal Control—Integrated Framework* issued by the Committee of Sponsoring Organizations of the Treadway Commission. The Company's management is responsible for maintaining effective internal control over financial reporting and for its assessment of the effectiveness of internal control over financial reporting, included in the accompanying Management's Annual Report on Internal Control over Financial Reporting. Our responsibility is to express an opinion on the Company's internal control over financial reporting based on our audit.

We conducted our audit in accordance with the standards of the Public Company Accounting Oversight Board (United States). Those standards require that we plan and perform the audit to obtain reasonable assurance about whether effective internal control over financial reporting was maintained in all material respects. Our audit included obtaining an understanding of internal control over financial reporting, assessing the risk that a material weakness exists, testing and evaluating the design and operating effectiveness of internal control based on the assessed risk, and performing such other procedures as we considered necessary in the circumstances. We believe that our audit provides a reasonable basis for our opinion.

A company's internal control over financial reporting is a process designed by, or under the supervision of, the company's principal executive and principal financial officers, or persons performing similar functions, and effected by the company's board of directors, management, and other personnel to provide reasonable assurance regarding the reliability of financial reporting and the preparation of financial statements for external purposes in accordance with generally accepted accounting principles. A company's internal control over financial reporting includes those policies and procedures that (1) pertain to the maintenance of records that, in reasonable detail, accurately and fairly reflect the transactions and dispositions of the assets of the company; (2) provide reasonable assurance that transactions are recorded as necessary to permit preparation of financial statements in accordance with generally accepted accounting principles, and that receipts and expenditures of the company are being made only in accordance with authorizations of management and directors of the company; and (3) provide reasonable assurance regarding prevention or timely detection of unauthorized acquisition, use, or disposition of the company's assets that could have a material effect on the financial statements.

Because of the inherent limitations of internal control over financial reporting, including the possibility of collusion or improper management override of controls, material misstatements due to error or fraud may not be prevented or detected on a timely basis. Also, projections of any evaluation of the effectiveness of the internal control over financial reporting to future periods are subject to the risk that the controls may become inadequate because of changes in conditions, or that the degree of compliance with the policies or procedures may deteriorate.

In our opinion, the Company maintained, in all material respects, effective internal control over financial reporting as of December 31, 2007, based on the criteria established in *Internal Control—Integrated Framework* issued by the Committee of Sponsoring Organizations of the Treadway Commission.

We have also audited, in accordance with the standards of the Public Company Accounting Oversight Board (United States), the consolidated financial statements and financial statement schedule as of and for the year ended December 31, 2007, of the Company and our report dated March 7, 2008 expressed an unqualified opinion on those financial statements and financial statement schedule and includes an explanatory paragraph regarding the Company's adoption of Financial Standards Accounting Board Interpretation No. 48, *Accounting for Uncertainty in Income Taxes*.

Item 9B. Other Information.

Not Applicable

PART III

Item 10. Directors, Executive Officers and Corporate Governance.

The names of our executive officers and their ages, titles and biographies as of the date hereof are incorporated by reference from Part I, Item 1, above.

The following information is included in our Notice of Annual Meeting of Stockholders and Proxy Statement to be filed within 120 days after our fiscal year end of December 31, 2007, or the Proxy Statement, and is incorporated herein by reference:

- Information regarding our directors who are standing for reelection and any persons nominated to become a director is set forth under Proposal 1 entitled “Election of Directors.”
- Information regarding our audit committee and our designated “audit committee financial expert” is set forth under the captions “Information Regarding the Board and its Committees” and “Audit Committee” under proposal 1 entitled “Election of Directors.”
- Information on our code of business conduct and ethics for directors, officers and employees is set forth under the caption “Code of Business Conduct and Ethics” under proposal 1 entitled “Election of Directors.”
- Information regarding Section 16(a) beneficial ownership reporting compliance is set forth under the caption “Section 16(a) Beneficial Ownership Reporting Compliance.”
- Information regarding procedures by which stockholders may recommend nominees to our Board of Directors is set forth under the caption “Nominating and Governance Committee” under Proposal 1 entitled “Election of Directors.”

Item 11. Executive Compensation.

Information regarding compensation of our named executive officers is set forth under the caption “Compensation of Executive Officers” in the Proxy Statement, which information is incorporated herein by reference.

Information regarding compensation of our directors is set forth under the caption “Compensation of Directors” in the Proxy Statement, which information is incorporated herein by reference.

Information regarding compensation committee interlocks is set forth under the caption “Compensation Committee Interlocks and Insider Participation” in the Proxy Statement, which information is incorporated herein by reference.

The Compensation Committee Report is set forth under the caption “Compensation Committee Report” in the Proxy Statement, which report is incorporated herein by reference.

Item 12. Security Ownership of Certain Beneficial Owners and Management and Related Stockholder Matters.

Information regarding security ownership of certain beneficial owners, directors and executive officers is set forth under the caption “Security Ownership of Certain Beneficial Owners and Management” in the Proxy Statement, which information is incorporated herein by reference.

Information regarding our equity compensation plans, including both stockholder approved plans and non-stockholder approved plans, is set forth under the caption “Equity Compensation Plan Information” in the Proxy Statement, which information is incorporated herein by reference.

Item 13. Certain Relationships and Related Transactions, and Director Independence.

Information regarding certain relationships and related transactions is set forth under the caption “Certain Relationships and Related Transactions” in the Proxy Statement, which information is incorporated herein by reference.

Information regarding director independence is set forth under the caption “Proposal 1–Election of Directors” in the Proxy Statement, which information is incorporated herein by reference.

Item 14. Principal Accountant Fees and Services.

Information regarding principal auditor fees and services is set forth under “Principal Accountant Fees and Services” in the Proposal entitled “Ratification of Selection of Independent Registered Public Accounting Firm” in the Proxy Statement, which information is incorporated herein by reference.

PART IV

Item 15. Exhibits and Financial Statement Schedules.

(a) The following documents are filed as part of this Form:

1. Financial Statements

	<u>Page</u>
Report of Independent Registered Public Accounting Firm	50
Consolidated Balance Sheets	51
Consolidated Statements of Income	52
Consolidated Statements of Stockholders' Equity	53
Consolidated Statements of Cash Flows	54
Notes to Consolidated Financial Statements	55

2. Financial Statement Schedules

Schedule II: Valuation and Qualifying Accounts.

All other schedules are omitted because they are not applicable or the required information is shown in the consolidated financial statements or notes thereto.

3. Exhibits

See Index to Exhibits at the end of this Report, which is incorporated herein by reference. The Exhibits listed in the accompanying Index to Exhibits are filed as part of this report.

REPORT OF INDEPENDENT REGISTERED PUBLIC ACCOUNTING FIRM

To the Board of Directors and Stockholders of Power Integrations, Inc.:

We have audited the accompanying consolidated balance sheets of Power Integrations, Inc. and subsidiaries (the Company) as of December 31, 2007 and 2006, and the related consolidated statements of income, stockholders' equity, and cash flows for each of the three years in the period ended December 31, 2007. Our audits also included the financial statement schedule for the years ended December 31, 2007, 2006 and 2005, listed in the Index at Item 15 (a) (2). These consolidated financial statements and financial statement schedule are the responsibility of the Company's management. Our responsibility is to express an opinion on the consolidated financial statements and financial statement schedule based on our audits.

We conducted our audits in accordance with the standards of the Public Company Accounting Oversight Board (United States). Those standards require that we plan and perform the audit to obtain reasonable assurance about whether the financial statements are free of material misstatement. An audit includes examining, on a test basis, evidence supporting the amounts and disclosures in the financial statements. An audit also includes assessing the accounting principles used and significant estimates made by management, as well as evaluating the overall financial statement presentation. We believe that our audits provide a reasonable basis for our opinion.

In our opinion, such consolidated financial statements present fairly, in all material respects, the financial position of the Company as of December 31, 2007 and 2006, and the results of its operations and its cash flows for each of the three years in the period ended December 31, 2007, in conformity with accounting principles generally accepted in the United States of America. Also, in our opinion, such financial statement schedule, when considered in relation to the basic consolidated financial statements taken as a whole, presents fairly, in all material respects, the information set forth therein.

As discussed in Note 6 to the consolidated financial statements, on January 1, 2007, the Company changed its method of accounting for uncertain income tax positions in accordance with guidance provided in the Financial Standards Accounting Board Interpretation No. 48, *Accounting for Uncertainty in Income Taxes*.

As discussed in Note 2 to the consolidated financial statements, on January 1, 2006, the Company changed its method of accounting for stock-based compensation in accordance with guidance provided in the Statement of Financial Accounting Standards No. 123(R), *Share Based Payment*.

We have also audited, in accordance with the standards of the Public Company Accounting Oversight Board (United States), the Company's internal control over financial reporting as of December 31, 2007, based on the criteria established in *Internal Control—Integrated Framework* issued by the Committee of Sponsoring Organizations of the Treadway Commission and our report dated March 7, 2008 expressed an unqualified opinion on the Company's internal control over financial reporting.

POWER INTEGRATIONS, INC.
NOTES TO CONSOLIDATED FINANCIAL STATEMENTS
DECEMBER 31, 2007

1. THE COMPANY:

Power Integrations, Inc., (or the “Company”), incorporated in California on March 25, 1988 and reincorporated in Delaware in December 1997, designs, develops, manufactures and markets proprietary, high-voltage, analog integrated circuits for use primarily in AC-DC and DC-DC power conversion in the consumer, communications, computer and industrial electronics markets.

The Company is subject to a number of risks including, among others, the volume and timing of orders received from customers, competitive pressures on selling prices, the demand for its products declining in the major end markets it serves, the inability to adequately protect or enforce its intellectual property rights, the volume and timing of orders placed by it with its wafer foundries and assembly subcontractors, the audit conducted by the Internal Revenue Service, which is asserting that it owes additional taxes relating to a number of items, incurred expenses related to stock-based compensation if required to change its assumptions used in the Black-Scholes model, required expenses incurred in connection with its litigation against Fairchild Semiconductor, System General Corporation and BCD, fluctuations in the exchange rate between the U.S. dollar and foreign currencies, the licensing of its intellectual property to one of its wafer foundries, the lengthy timing of its sales cycle, undetected defects and failures in meeting the exact specifications required by its products, reliance on its international sales activities which account for a substantial portion of net revenues, its ability to develop and bring to market new products and technologies on a timely basis, the ability of its products to penetrate additional markets, attraction and retention of qualified personnel in a competitive market, changes in environmental laws and regulations, earthquakes, terrorist acts or other disasters.

2. SUMMARY OF SIGNIFICANT ACCOUNTING POLICIES:

Principles of Consolidation

The consolidated financial statements include the accounts of the Company and its wholly owned subsidiaries after elimination of all intercompany transactions and balances.

Estimates

The preparation of financial statements in conformity with accounting principles generally accepted in the United States of America, GAAP, requires management to make estimates and assumptions that affect the reported amounts of assets and liabilities and disclosures of contingent assets and liabilities at the date of the financial statements and the reported amounts of revenues and expenses during the reporting period. Actual results could differ from those estimates. On an ongoing basis, the Company evaluates its estimates, including those related to revenue recognition and allowances for receivables and inventories. These estimates are based on historical facts and various other assumptions that the Company believes to be reasonable at the time the estimates are made.

Foreign Currency Translation

The functional currencies of the Company’s subsidiaries are the local currencies. Accordingly, all assets and liabilities are translated into U.S. dollars at the current exchange rates as of the applicable balance sheet date. Revenues and expenses are translated at the average exchange rate prevailing during the period. Cumulative gains and losses from the translation of the foreign subsidiaries’ financial statements have been included in stockholders’ equity.

POWER INTEGRATIONS, INC.

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS (Continued)

Cash and Cash Equivalents and Investments

The Company considers cash invested in highly liquid financial instruments with a remaining maturity of three months or less at date of purchase to be cash equivalents. Investments in highly liquid financial instruments with maturities greater than three months but not longer than twelve months from the balance sheet date are classified as short-term investments. Investments in highly liquid financial instruments with maturities greater than twelve months from the balance sheet date are classified as long-term investments. As of December 31, 2007 and 2006, the Company's short-term and long-term investments consisted of U.S. government backed securities, municipal bonds, corporate commercial paper and other high quality commercial securities, which were valued using the amortized cost method, which approximates fair market value. All investments are classified as held-to-maturity except auction rate securities which are classified as available-for-sale.

The table below summarizes the carrying value of the Company's investments by major security type (in thousands):

	December 31,	
	2007	2006
Cash Equivalents:		
Commercial paper	\$ 93,888	\$110,922
Total cash equivalents	93,888	110,922
Short-term Investments:		
U.S. corporate securities	83,820	6
U.S. government securities	2,000	2,500
Total short-term investments	85,820	2,506
Investments, matures in excess of 1 year	—	3,999
Total investment securities	\$179,708	\$117,427

Restricted Cash

The Company's restricted cash balance of \$1.3 million at December 31, 2007 consists of an interest-bearing certificate of deposit at Union Bank of California. The certificate of deposit had interest at rates ranging from 3.55% to 4.64% and is renewed every 90 days. The current maturity for the certificate of deposit is July 28, 2008. The Company entered into a security agreement with the bank, whereby it agreed to maintain \$1.3 million in an interest-bearing certificate of deposit with the bank. The certificate of deposit is restricted based on the bank's requirement that the Company maintain a restricted cash account in order to secure commercial letters of credit or standby letters of credit up to the deposit amount. This account is established in accordance with an agreement between the Company and the bank. As of December 31, 2007, there was one outstanding letter of credit totaling approximately \$0.2 million. As of February 29, 2008, the Company's restricted cash amount was reduced to \$0.3 million to adjust for a change in its outstanding letters of credit. This agreement remains in effect until cancellation of the Company's letters of credit.

POWER INTEGRATIONS, INC.

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS (Continued)

Inventories

Inventories (which consist of costs associated with the purchases of wafers from offshore foundries and of packaged components from several offshore assembly manufacturers, as well as internal labor and overhead associated with the testing of both wafers and packaged components) are stated at the lower of cost (first in, first- out) or market. Provisions, when required, are made to reduce excess and obsolete inventories to their estimated net realizable values. Inventories consist of the following (in thousands):

	December 31,	
	2007	2006
Raw materials	\$ 2,896	\$ 7,869
Work-in-process	6,662	6,767
Finished goods	10,138	13,644
Total	\$19,696	\$28,280

Property and Equipment

Property and equipment consist of the following (in thousands):

	December 31,	
	2007	2006
Land	\$ 16,453	\$ 16,453
Building and improvements	25,453	25,200
Machinery and equipment	55,737	49,600
Office furniture and equipment	17,710	15,436
	115,353	106,689
Accumulated depreciation	(58,613)	(53,214)
Total	\$ 56,740	\$ 53,475

Depreciation and amortization expense of property and equipment for fiscal years ended 2007 and 2006 was approximately \$7.5 million and \$6.4 million, respectively, and was determined using the straight-line method over the following useful lives:

Building and improvements	4-40 years or life of lease agreement, if shorter
Machinery and equipment	2-5 years
Office furniture and equipment	4 years

Total property and equipment located in the United States at December 31, 2007, 2006 and 2005 were approximately 74%, 81% and 85%, respectively, of total property and equipment. Of the total property and equipment located in foreign countries, there was no individual country that held more than 10% of total property and equipment.

Goodwill and Intangible Assets

Goodwill of \$1.8 million was recorded on the Company's balance sheet at December 31, 2007, in connection with its acquisition of Potentia Semiconductor Corporation. See Note 8 "Acquisition" in our notes to consolidated financial statements for details on the Company's acquisition, including the analysis performed to determine the goodwill amount of \$1.8 million at December 31, 2007. Going forward, goodwill will be evaluated in accordance with SFAS No. 142, *Goodwill and Other Intangible Assets*, and an impairment analysis will be conducted on an annual basis, or sooner if the indicators exist for a potential impairment.

POWER INTEGRATIONS, INC.

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS (Continued)

Intangible assets consist primarily of acquired licenses, patent rights and customer relationships, and are reported net of accumulated amortization. The Company amortizes the cost of intangible assets over the term of the acquired license or patent rights, or the expected life of customer relationships, which range from five to twelve years. As a result of the Company's acquisition of Potentia Semiconductor Corporation on December 31, 2007, the Company acquired developed technology for \$1.1 million, which has a seven year useful life, and customer relationships for \$0.5 million, which have a five year useful life. Amortization of intangible assets was approximately \$0.8 million in 2007 and \$0.7 million in 2006. We do not believe there is any significant residual value associated with the intangible assets:

	December 31, 2007			December 31, 2006		
	Gross	Accumulated Amortization	Net	Gross	Accumulated Amortization	Net
	(In thousands)					
Patent rights	\$3,165	\$(1,339)	\$1,826	\$3,165	\$ (978)	\$2,187
Technology licenses	4,057	(780)	3,277	4,057	(375)	3,682
Developed technology	1,140	—	1,140	—	—	—
Other intangibles	37	(19)	18	37	(11)	26
Customer relationships	470	—	470	—	—	—
Total intangible assets	\$8,869	\$(2,138)	\$6,731	\$7,259	\$(1,364)	\$5,895

The estimated future amortization expense related to intangible assets at December 31, 2007 is as follows:

Fiscal Year	Estimated Amortization (in thousands)
2008	\$1,031
2009	1,020
2010	985
2011	952
2012	764
Thereafter	1,979
Total	\$6,731

Impairment of Long-Lived Assets

In accordance with SFAS No. 144, Accounting for the Impairment or Disposal of Long-Lived Assets, long-lived assets, such as property and equipment and intangible assets, are reviewed for impairment whenever events or changes in circumstances indicate that the carrying amount of an asset may not be recoverable. Recoverability of assets to be held and used is measured by a comparison of the carrying amount of an asset to estimate undiscounted future cash flows expected to be generated by the asset. If the carrying amount of an asset exceeds its estimated future cash flows, an impairment charge is recognized by the amount by which the carrying amount of the asset exceeds the fair value of the asset. Assets to be disposed of would be separately presented in the balance sheet and reported at the lower of the carrying amount or fair value less costs to sell, and would no longer be depreciated. The assets and liabilities of a disposed group classified as held for sale would be presented separately in the appropriate asset and liability sections of the balance sheet. Currently the Company has no impairment of long-lived assets nor any assets held for disposal.

POWER INTEGRATIONS, INC.

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS (Continued)

Earnings Per Share

Basic earnings per share are calculated by dividing net income by the weighted-average shares of common stock outstanding during the period. Diluted earnings per share are calculated by dividing net income by the weighted-average shares of common stock and dilutive common equivalent shares outstanding during the period. Dilutive common equivalent shares included in the diluted calculation consist of dilutive shares issuable upon the exercise of outstanding common stock options and computed using the treasury stock method.

A summary of the earnings per share calculation is as follows (in thousands, except per share amounts):

	<u>Year Ended December 31,</u>		
	<u>2007</u>	<u>2006</u>	<u>2005</u>
Basic earnings per share:			
Net income	\$26,624	\$ 9,425	\$15,698
Weighted-average common shares	28,969	29,059	29,568
Basic earnings per share	<u>\$ 0.92</u>	<u>\$ 0.32</u>	<u>\$ 0.53</u>
Diluted earnings per share:			
Net income	\$26,624	\$ 9,425	\$15,698
Weighted-average common shares	28,969	29,059	29,568
Effect of dilutive securities:			
Stock options	2,219	1,760	1,264
Employee stock purchase plan	66	—	11
Diluted weighted-average common shares	<u>31,254</u>	<u>30,819</u>	<u>30,843</u>
Diluted earnings per share	<u>\$ 0.85</u>	<u>\$ 0.31</u>	<u>\$ 0.51</u>

Options to purchase 2,996,102, 3,554,345 and 1,969,496 shares of Company's common stock outstanding for the years ended December 31, 2007, 2006 and 2005, respectively, were not included in the computation of diluted earnings per share. This was due to the exercise prices of these options to purchase shares of the Company's common stock being greater than the average market price of the Company's common stock during those periods, making their effect anti-dilutive.

Comprehensive Income

Comprehensive income consists of net income, plus the effect of foreign currency translation adjustments. The components of comprehensive income, net of taxes are as follows (in thousands):

	<u>Year Ended December 31,</u>		
	<u>2007</u>	<u>2006</u>	<u>2005</u>
Net income	\$26,624	\$9,425	\$15,698
Other comprehensive income:			
Translation adjustments	81	125	(7)
Total comprehensive income	<u>\$26,705</u>	<u>\$9,550</u>	<u>\$15,691</u>

POWER INTEGRATIONS, INC.

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS (Continued)

Segment Reporting

The Company is organized and operates as one business segment, the design, development, manufacture and marketing of proprietary, high-voltage, analog integrated circuits for use primarily in the AC-DC and DC-DC power conversion markets. The Company's chief operating decision maker, the Chief Executive Officer, reviews financial information presented on a consolidated basis for purposes of making operating decisions and assessing financial performance.

Revenue Recognition, Significant Customers

Product revenues consist of sales to OEMs, merchant power supply manufacturers and distributors. Shipping terms to international OEMs and merchant power supply manufacturers from the Company's facility in California are "delivered at frontier," commonly referred to as DAF. As such, title to the product passes to the customer when the shipment reaches the destination country, and revenue is recognized upon the arrival of the Company's product in that country. Beginning in December 2005, shipping terms to the Company's international OEMs and merchant power supply manufacturers shipped from the Company's facilities outside of the United States are "EX Works" (EXW), meaning that title to the product transfers to the customer upon shipment from the Company's foreign warehouses. Shipments to North and South American OEMs and merchant power supply manufacturers are "FOB-point of origin" meaning revenue is recognized upon shipment, when the title is passed to the customer.

Sales to distributors are made under terms allowing certain rights of return and protection against subsequent price declines on the Company's products held by the distributors. As a result of these rights, the Company defers the recognition of revenue and the costs of revenues derived from sales to distributors until such distributors resell the Company's products to their customers. The Company determines the amounts to defer based on the level of actual inventory on hand at its distributors as well as inventory that is in transit to its distributors. The gross profit that is deferred as a result of this policy is reflected as "deferred income on sales to distributors" in the accompanying consolidated balance sheets.

Net revenue is reduced by estimated sales returns and allowances. The Company analyzes the following factors: historical returns, current economic trends, levels of inventories of the Company's products held by its customers, and changes in customer demand and acceptance of the Company's products and uses this information to review and determine the adequacy of the reserve. This reserve represents a reserve of the gross margin on estimated future returns and is reflected as a reduction to accounts receivable in the accompanying consolidated balance sheets. Increases to the reserve are recorded as a reduction to net revenue equal to the expected customer credit memo and a corresponding credit is made to cost of revenues equal to the estimated cost of the returned product. The net difference, or gross margin, is recorded as an addition to the reserve.

Approximately 64% of the Company's net product sales were made to distributors in 2007. Frequently, distributors need to sell at a price lower than the standard distribution price in order to win business. After the distributor ships product to its customer, the distributor submits a "ship and debit" claim to the Company to adjust its cost from the standard price to the pre-approved lower price. After verification by the Company, a credit memo is issued to the distributor to adjust the sell-in price from the standard distribution price to the approved lower price. The Company maintains a reserve for these credits that appears as a reduction to accounts receivable in the Company's accompanying consolidated balance sheets. Any increase in the reserve results in a corresponding reduction in the Company's net revenues. To establish the adequacy of its reserves, the Company analyzes historical ship and debit payments and levels of inventory in the distributor channels.

From time to time the Company will reduce the distribution list price. As a result, the Company gives distributors protection, in the form of credits, against price declines on products they hold. The credits are referred to as "price protection." Since the Company does not recognize revenue until the distributor sells the product to its

POWER INTEGRATIONS, INC.

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS (Continued)

customers, the Company generally does not need to provide reserves for price protection. However, in rare instances the Company must consider price protection in the analysis of reserve requirements, as there may be a timing gap between a price decline and the issuance of price protection credits. If a price protection reserve is required, the Company will maintain a reserve for these credits that appears as a reduction to accounts receivable in the Company's accompanying consolidated balance sheets. Any increase in the reserve results in a corresponding reduction in the Company's net revenues. The Company analyzes distribution price declines and levels of inventory in the distributor channels in determining the reserve levels required.

For the years ended December 31, 2007, 2006 and 2005, the Company's top ten customers, including distributors that resell the Company's products to OEMs and merchant power supply manufacturers, accounted for approximately 62%, 58% and 69% of net revenues, respectively.

The following distribution customers accounted for more than 10% of total net revenues:

<u>Customer</u>	<u>Year Ended December 31,</u>		
	<u>2007</u>	<u>2006</u>	<u>2005</u>
Avnet (formerly Memec)	23%	23%	19%
Synnex Technologies	—	—	18%

Export Sales

The Company markets its products in and outside of North and South America through its sales personnel and a worldwide network of independent sales representatives and distributors. As a percentage of total net revenues, export sales, which consist of domestic and foreign sales to distributors and direct customers outside of North and South America, are comprised of the following:

	<u>Year Ended December 31,</u>		
	<u>2007</u>	<u>2006</u>	<u>2005</u>
Hong Kong/China	41%	32%	24%
Korea	17%	20%	20%
Taiwan	14%	15%	27%
Western Europe	8%	10%	10%
Germany	6%	5%	4%
Japan	5%	5%	5%
Singapore	2%	3%	3%
Other	2%	3%	— %
Total export sales	95%	93%	93%

The remainder of the Company's sales are to customers within North and South America, primarily located in the United States, with some sales to customers located in Mexico and Brazil.

Product Sales

Sales of TOPSwitch and TinySwitch products accounted for 80%, 89% and 95% of total net revenues in 2007, 2006 and 2005, respectively. TOPSwitch products include TOPSwitch, TOPSwitch-II, TOPSwitch-FX, TOPSwitch-GX and TOPSwitch-HX. TinySwitch products include TinySwitch, TinySwitch-II, TinySwitch-III, TinySwitch-PK and PeakSwitch. Sales of the Company's Linkswitch product accounted for 18%, 9% and 5% of net revenues from product sales for the years ended December 31, 2007, 2006 and 2005, respectively. Linkswitch products include Linkswitch, Linkswitch-TN, Linkswitch-XT, Linkswitch-LP and Linkswitch-HF.

POWER INTEGRATIONS, INC.

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS (Continued)

Revenue mix by product family is comprised of the following:

<u>Product Family</u>	<u>Year Ended December 31,</u>		
	<u>2007</u>	<u>2006</u>	<u>2005</u>

Revenue mix by end markets served is comprised of the following:

<u>End Market</u>	<u>Year Ended December 31,</u>		
	<u>2007</u>	<u>2006</u>	<u>2005</u>
Consumer	30%	32%	30%
Communications	27%	28%	29%
Computer	21%	19%	23%
Industrial electronics	15%	15%	11%
Other	7%	6%	7%

Foreign Currency Risk

The Company does not currently employ a foreign currency hedge program utilizing foreign currency forward exchange contracts. The Company maintains a Japanese yen bank account with a U.S. bank for payments to suppliers and for cash receipts from Japanese suppliers and customers denominated in yen. For the years ended December 31, 2007, 2006 and 2005, the Company realized foreign exchange transaction losses of approximately \$268,000, \$236,000 and \$167,000, respectively. These amounts are included in “other income (expense)” in the accompanying consolidated statements of income.

Warranty

The Company generally warrants that its products will substantially conform to the published specifications for 12 months from the date of shipment. The Company’s liability is limited to either a credit equal to the purchase price or replacement of the defective part. Returns under warranty have historically been immaterial, and as a result, the Company does not record a specific warranty reserve. Actual future returns could be different than the returns allowance established.

Advertising

Advertising costs are expensed as incurred. Advertising costs amounted to \$1.0 million, \$0.8 million, and \$0.8 million, in 2007, 2006 and 2005, respectively.

Research and Development

Research and development costs are expensed as incurred.

Income Taxes

Income tax expense is an estimate of current income taxes payable or refundable in the current fiscal year based on reported income before income taxes. Deferred income taxes reflect the effect of temporary differences and carry-forwards that are recognized for financial reporting and income tax purposes. These deferred taxes are

POWER INTEGRATIONS, INC.

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS (Continued)

measured by applying currently enacted tax laws. The Company recognizes valuation allowances, which reduce deferred tax assets to the amount that the Company estimates will be more likely than not realized, based upon available evidence and management judgment. The Company limits the deferred tax assets recognized related to certain stock based compensation of its officers to amounts that it estimates will be deductible in future periods based upon the provisions of the Internal Revenue Code Section 162(m). As of December 31, 2007, the Company had not recorded any valuation allowance against its deferred tax assets. In the event that the Company determines, based on available evidence and management judgment, that all or part of the net deferred tax assets will not be realized in the future, the Company would record a valuation allowance in the period the determination is made. In addition, the calculation of tax liabilities involves significant judgment in estimating the impact of uncertainties in the application of complex tax laws. Resolution of these uncertainties in a manner inconsistent with the Company's expectations could have a material impact on its results of operations and financial position.

Stock-Based Compensation

Prior to January 1, 2006, the Company accounted for its share-based employee compensation plans under the measurement and recognition provisions of Accounting Principles Board Opinion (APB) No. 25, *Accounting for Stock Issued to Employees*, and related Interpretations, as permitted by Financial Accounting Standards Board Statement of Financial Accounting Standards (SFAS) No. 123, *Accounting for Stock-Based Compensation*. In accordance with SFAS No. 123, the Company disclosed its net income (loss) per share as if the Company had applied the fair value-based method in measuring compensation expense for its share-based incentive awards.

Effective January 1, 2006, the Company adopted the fair value recognition provisions of SFAS No. 123(R), *Share-Based Payment*, using the modified prospective transition method. Under that transition method, compensation expense that the Company recognizes beginning on that date includes expenses associated with the fair value of all awards granted on and after January 1, 2006, and expense for the unvested portion of previously granted awards outstanding on January 1, 2006. Results for prior periods have not been restated.

Determining Fair Value

The Company uses the Black-Scholes valuation method for valuing stock option grants using the following assumptions and estimates:

Expected Volatility. The Company calculates expected volatility as a weighted average of implied volatility and historical volatility.

Expected Life. The Company uses the simplified method to calculate the expected life of stock option grants, identified in Securities and Exchange Commission Staff Accounting Bulletin No. 107 ("SAB 107") for share-based awards granted. This method assumes all options will be exercised midway between the vesting date and the contractual term of the option.

Risk-Free Interest Rate. The Company bases the risk-free interest rate used in the Black-Scholes valuation method on the implied yield available on a U.S. Treasury note with a term equal to the expected term of the underlying grants.

Dividends. The Company has not paid dividends in the past, nor does it have any current plans to pay dividends. As such, the Company uses a dividend yield percentage of zero.

Estimated Forfeitures. The Company uses historical data to estimate pre-vesting option forfeitures, and records share-based compensation expense only for those awards that are expected to vest.

POWER INTEGRATIONS, INC.

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS (Continued)

Fair Value of Financial Instruments

The estimated fair value of the Company's note to its supplier was approximately \$9.9 million at December 31, 2007. The fair value was estimated using a pricing model incorporating current market rates. The note had a carrying cost of \$10.0 million at December 31, 2007.

The carrying value of cash, cash equivalents, restricted cash, investments, excluding the Company's note to its supplier, accounts receivable, accounts payable and accrued liabilities approximate their fair values as of December 31, 2007 and 2006, because of the relatively short maturity of these instruments.

Concentration of Credit Risk

Financial instruments that potentially subject the Company to concentrations of credit risk consist principally of cash investments and trade receivables. The Company has cash investment policies that limit cash investments to low risk investments. With respect to trade receivables, the Company performs ongoing credit evaluations of its customers' financial condition and requires letters of credit whenever deemed necessary. Additionally, the Company establishes an allowance for doubtful accounts based upon factors surrounding the credit risk of specific customers, historical trends related to past losses and other relevant information. Account balances are charged off against the allowance after all means of collection have been exhausted and the potential for recovery is considered remote. The Company does not have any off-balance sheet credit exposure related to its customers. As of December 31, 2007 and 2006, approximately 66% and 67% of accounts receivable, respectively, were concentrated with ten customers. As of December 31, 2007, no one customer accounted for 10% or more of the Company's accounts receivable. As of December 31, 2006, the Company had one distribution customer that represented 22% of accounts receivable and no other customer accounted for 10% or more of accounts receivable.

Indemnifications

The Company sells products to its distributors under contracts, collectively referred to as Distributor Sales Agreements ("DSA"). Each DSA contains the relevant terms of the contractual arrangement with the distributor, and generally includes certain provisions for indemnifying the distributor against losses, expenses, and liabilities from damages that may be awarded against the distributor in the event the Company's hardware is found to infringe upon a patent, copyright, trademark, or other proprietary right of a third party (Customer Indemnification). The DSA generally limits the scope of and remedies for the Customer Indemnification obligations in a variety of industry-standard respects, including, but not limited to, limitations based on time and geography, and a right to replace an infringing product. The Company also, from time to time, has granted a specific indemnification right to individual customers.

The Company believes its internal development processes and other policies and practices limit its exposure related to such indemnifications. In addition, the Company requires its employees to sign a proprietary information and inventions agreement, which assigns the rights to its employees' development work to the Company. To date, the Company has not had to reimburse any of its distributors or customers for any losses related to these indemnifications and no material claims were outstanding as of December 31, 2007. For several reasons, including the lack of prior indemnification claims and the lack of a monetary liability limit for certain infringement cases, the Company cannot determine the maximum amount of potential future payments, if any, related to such indemnifications.

Recently Issued Accounting Pronouncements

In September 2006, the FASB issued FAS No. 157, "Fair Value Measurements" ("FAS 157"). FAS 157 establishes a framework for measuring fair value in generally accepted accounting principles and expands disclosures about fair value measurements. FAS 157 applies under other previously issued accounting pronouncements that require

POWER INTEGRATIONS, INC.

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS (Continued)

or permit fair value measurements but does not require any new fair value measurements. FAS 157 is effective for financial statements issued for fiscal years beginning after November 15, 2007, and interim periods within those fiscal years, and is required to be adopted by the Company in the first quarter of 2008, with the exception of all non-financial assets and liabilities, except those items recognized or disclosed at fair value on an annual or more frequently recurring basis, which will be effective for years beginning after November 15, 2008. The Company is currently evaluating the impact of FAS 157 on its consolidated financial statements.

In February 2007, the Financial Accounting Standards Board, or FASB issued SFAS No. 159, *The Fair Value Option for Financial Assets and Financial Liabilities—Including an amendment of FASB Statement No. 115* (SFAS No. 159). SFAS No. 159 expands the use of fair value accounting but does not affect existing standards, which require assets or liabilities to be carried at fair value. Under SFAS No. 159, the Company may elect to use fair value to measure accounts and loans receivable, available-for-sale and held-to-maturity securities, equity method investments, accounts payable, guarantees and issued debt. Other eligible items include firm commitments for financial instruments that otherwise would not be recognized at inception and non-cash warranty obligations where a warrantor is permitted to pay a third party to provide the warranty goods or services. If the use of fair value is elected, any upfront costs and fees related to the item must be recognized in earnings and cannot be deferred, e.g., debt issue costs. The fair value election is irrevocable and generally made on an instrument-by-instrument basis, even if the Company has similar instruments that it elects not to measure based on fair value. At the adoption date, unrealized gains and losses on existing items for which fair value has been elected are reported as a cumulative adjustment to beginning retained earnings. SFAS No. 159 is effective for fiscal years beginning after November 15, 2007, and is required to be adopted by the Company in the first quarter of 2008. The Company is currently determining whether fair value accounting is appropriate for any of its eligible items and cannot estimate the impact, if any, that SFAS No. 159 will have on the Company's consolidated results of operations and financial condition.

In June 2007, the FASB ratified Emerging Issues Task Force (EITF) 06-11, *Accounting for Income Tax Benefits of Dividends on Share-Based Payment Awards* (EITF 06-11). EITF 06-11 requires that the tax benefits of dividends on unvested share-based payments be recognized in equity and be reclassified from additional paid-in capital to the income statement when the related award is forfeited or no longer expected to vest. EITF 06-11 is effective, on a prospective basis, for fiscal years beginning after December 15, 2007, and will be adopted by the Company in the first quarter of 2008. The Company is currently evaluating the impact of EITF 06-11.

In June 2007, the FASB ratified EITF 07-3, *Accounting for Non-Refundable Advance Payments for Goods or Services Received for Use in Future Research and Development Activities* (EITF 07-3). EITF 07-3 requires that nonrefundable advance payments for goods or services that will be used or rendered for future research and development activities be deferred and capitalized and recognized as an expense as the goods are delivered or the related services are performed. EITF 07-3 is effective, on a prospective basis, for fiscal years beginning after December 15, 2007 and will be adopted by the Company in the first quarter of 2008. The Company is currently evaluating the effect that the adoption of EITF 07-3 will have on its consolidated results of operations and financial condition.

In December 2007, the FASB issued SFAS No. 141 (revised 2007), *Business Combinations*, (SFAS 141R). SFAS 141R establishes principles and requirements for how an acquirer recognizes and measures in its financial statements the identifiable assets acquired, the liabilities assumed, any noncontrolling interest in the acquiree and the goodwill acquired. SFAS 141R also establishes disclosure requirements to enable the evaluation of the nature and financial effects of the business combination. SFAS 141R is effective for fiscal years beginning after December 15, 2008, and will be adopted by the Company in the first quarter of 2009. The Company is currently evaluating the potential impact, if any, of the adoption of SFAS 141R on its consolidated results of operations and financial condition.

POWER INTEGRATIONS, INC.

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS (Continued)

In December 2007, the FASB issued SFAS No. 160, *Noncontrolling Interests in Consolidated Financial Statements—an amendment of Accounting Research Bulletin No. 51* (SFAS 160). SFAS 160 establishes accounting and reporting standards for ownership interests in subsidiaries held by parties other than the parent, the amount of consolidated net income attributable to the parent and to the noncontrolling interest, changes in a parent’s ownership interest and the valuation of retained noncontrolling equity investments when a subsidiary is deconsolidated. SFAS 160 also establishes disclosure requirements that clearly identify and distinguish between the interests of the parent and the interests of the noncontrolling owners. SFAS 160 is effective as of the beginning of an entity’s fiscal year that begins after December 15, 2008, and will be adopted by the Company in the first quarter of 2009. The Company is currently evaluating the potential impact, if any, of the adoption of SFAS 160 on its consolidated results of operations and financial condition.

During 2007, the Company adopted the following accounting pronouncements:

- Effective January 1, 2007, the Company adopted the provisions of Financial Accounting Standards Board Interpretation No. 48, *Accounting for Uncertainty in Income Taxes* (“FIN 48”). The information on the implementation of FIN 48 is set forth in Note 6.
- Effective January 1, 2007, the Company adopted the provisions of SFAS 158, *Employers Accounting for Defined Benefit Pension and Other Postretirement Plans—an amendment of FASB Statements No. 87, 88, 106, and 132(R)*, (SFAS 158). The adoption did not have a material impact on the Company’s consolidated financial statements.

3. COMMITMENTS AND CONTINGENCIES:

From time to time the Company becomes involved in lawsuits, or customers and distributors may make claims against the Company. See Note 7 below. In accordance with SFAS No. 5, *Accounting for Contingencies*, the Company makes a provision for a liability when it is both probable that a liability has been incurred and the amount of the loss can be reasonably estimated.

Facilities—The Company owns its main executive, administrative, manufacturing and technical offices in San Jose, California.

The Company had no capital leasing arrangements as of December 31, 2007. At December 31, 2007 the Company had \$16.4 million of non-cancelable purchase obligations, consisting primarily of inventory related items.

Future minimum lease payments under all non-cancelable operating lease agreements as of December 31, 2007 are as follows (in thousands):

<u>Fiscal Year</u>	
2008	\$ 752
2009	371
2010	234
2011	86
2012	22
Thereafter	<u>122</u>
Total minimum lease payments	<u>\$1,587</u>

Total rent expense amounted to \$0.6 million, \$0.5 million and \$0.4 million in the years ended December 31, 2007, 2006 and 2005, respectively.

POWER INTEGRATIONS, INC.

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS (Continued)

4. PREFERRED STOCK PURCHASE RIGHTS PLAN:

In February 1999, the Company adopted a Preferred Stock Purchase Rights Plan (the "Plan") designed to enable all stockholders to realize the full value of their investment and to provide for fair and equal treatment for all stockholders in the event that an unsolicited attempt is made to acquire the Company. Under the Plan, stockholders received one right to purchase one one-thousandth of a share of a new series of preferred stock for each outstanding share of common stock held at \$150.00 per right, when someone acquires 15 percent or more of the Company's common stock or announces a tender offer which could result in such person owning 15 percent or more of the common stock. Each one one-thousandth of a share of the new preferred stock has terms designed to make it substantially the economic equivalent of one share of common stock. Prior to someone acquiring 15 percent, the rights can be redeemed for \$0.001 each by action of the board of directors. Under certain circumstances, if someone acquires 15 percent or more of the common stock, the rights permit the stockholders, other than the acquirer, to purchase the Company's common stock having a market value of twice the exercise price of the rights, in lieu of the preferred stock. Alternatively, when the rights become exercisable, the board of directors may authorize the issuance of one share of common stock in exchange for each right that is then exercisable. The Company's Board of Directors may, in its discretion, permit a stockholder to increase its ownership percentage to an amount in excess of 15 percent without triggering the provisions of the Plan, and has done so with respect to one investor, allowing that investor to acquire up to 20 percent of the Company's common stock without triggering the provisions of the Plan. In addition, in the event of certain business combinations, the rights permit the purchase of the common stock of an acquirer at a 50 percent discount. Rights held by the acquirer will become null and void in both cases. The rights expire on February 23, 2009.

5. STOCKHOLDERS' EQUITY:

Preferred Stock

The Company is authorized to issue 3,000,000 shares of \$0.001 par value preferred stock, none of which were issued or outstanding during each of the three years ended December 31, 2007, 2006 and 2005.

Common Stock

As of December 31, 2007, the Company was authorized to issue 140,000,000 shares of \$0.001 par value common stock.

On October 19, 2005, the Company announced that its board of directors had authorized a stock repurchase program of up to \$25 million of the Company's common stock, with the repurchases to be made pursuant to Rule 10b5-1 of the Exchange Act. From inception of this repurchase plan through June 2006, the Company purchased a total of 1,334,216 shares for a total of approximately \$25 million, concluding this repurchase program. After the conclusion of the repurchase plan in June 2006, there were no further repurchases through December 31, 2007. In January 2008, the Company's board of directors approved a third repurchase program, see Note 13, *Subsequent Events*, for further details.

1988 Stock Option Plan

In June 1988, the board of directors adopted the 1988 Stock Option Plan (the "1988 Plan"), whereby the board of directors may grant incentive stock options and non-qualified stock options to key employees, directors and consultants to purchase the Company's common stock. The exercise price of incentive stock options may not be less than 100% of the fair market value of the Company's common stock on the date of grant. The exercise price of non-qualified stock options may not be less than 85% of the fair market value of the Company's common stock on the date of grant. In general, options vest over either 48 or 50 months. Options generally have a

POWER INTEGRATIONS, INC.

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS (Continued)

maximum term of ten years after the date of grant (five years if an incentive stock option is granted to a ten percent owner optionee), subject to earlier termination upon an optionee's cessation of employment or service. Effective July 1997, the board of directors determined that no further options would be granted under the 1988 Plan, but all outstanding options would continue to be governed and remain outstanding in accordance with their existing terms.

1997 Stock Option Plan

In June 1997, the board of directors adopted the 1997 Stock Option Plan (the "1997 Plan"), whereby the board of directors may grant incentive stock options and non-qualified stock options to key employees, directors and consultants to purchase the Company's common stock. The exercise price of incentive stock options may not be less than 100% of the fair market value of the Company's common stock on the date of grant. The exercise price of non-qualified stock options may not be less than 85% of the fair market value of the Company's common stock on the date of grant. The 1997 Plan originally provided that the number of shares reserved for issuance automatically increased on each January 1st, from January 1, 1999 through January 1, 2007, by 5% of the total number of shares of common stock issued and outstanding on the last day of the preceding fiscal year. In January 2005, the board of directors amended the 1997 Plan to reduce the annual increase from 5% to 3.5%, so that the number of shares reserved for issuance automatically increases on each January 1st, from January 1, 2006 through January 1, 2007, by 3.5% of the total number of shares of common stock issued and outstanding on the last day of the preceding fiscal year. Effective November 2007, the board of directors determined that no further options would be granted under the 1997 Plan, and shares remaining available for issuance under the 1997 Plan, including shares subject to outstanding options under the 1997 Plan were transferred to the 2007 Equity Incentive Plan. All outstanding options would continue to be governed and remain outstanding in accordance with their existing terms.

1997 Outside Directors Stock Option Plan

In September 1997, the board of directors adopted the 1997 Outside Directors Stock Option Plan (the "Directors Plan"). A total of 800,000 shares of common stock have been reserved for issuance under the Directors Plan. The Directors Plan is designed to work automatically without administration; however, to the extent administration is necessary, it will be performed by the board of directors. The Directors Plan provides for the automatic grant of nonstatutory stock options to nonemployee directors of the Company over their period of service on the board of directors. The Directors Plan provides that each future nonemployee director of the Company will be granted an option to purchase 30,000 shares of common stock on the date on which such individual first becomes a nonemployee director of the Company (the "Initial Grant"). Thereafter, each nonemployee director who has served on the board of directors continuously for 12 months will be granted an additional option to purchase 10,000 shares of common stock (an "Annual Grant"). Subject to an optionee's continuous service with the Company, approximately 1/3rd of an Initial Grant will become exercisable one year after the date of grant and 1/36th of the Initial Grant will become exercisable monthly thereafter. Each Annual Grant will become exercisable in twelve equal monthly installments beginning in the 25th month after the date of grant, subject to the optionee's continuous service. The exercise price per share of all options granted under the Directors Plan is equal to the fair market value of a share of common stock on the date of grant. Options granted under the Directors Plan have a maximum term of ten years after the date of grant, subject to earlier termination upon an optionee's cessation of service. In the event of certain changes in control of the Company, all options outstanding under the Directors Plan will become immediately vested and exercisable in full.

1998 Nonstatutory Stock Option Plan

In July 1998, the board of directors adopted the 1998 Nonstatutory Stock Option Plan (the "1998 Plan"), whereby the board of directors may grant nonstatutory stock options to employees and consultants, but only to the extent that such options do not require approval of the Company's stockholders. The 1998 Plan has not been approved by the Company's stockholders. The exercise price of nonstatutory stock options may not be less than 85% of the fair market

POWER INTEGRATIONS, INC.

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS (Continued)

value of the Company's common stock on the date of grant. As of December 31, 2007, the maximum number of shares that may be issued under the 1998 Plan was 1,000,000 shares. In general, options vest over 48 months. Options generally have a maximum term of ten years after the date of grant, subject to earlier termination upon an optionee's cessation of employment or service.

2007 Equity Incentive Plan

The 2007 Equity Incentive Plan (the "2007 Plan") was adopted by the board of directors on September 10, 2007 and approved by the stockholders on November 7, 2007 as an amendment and restatement of the 1997 Stock Option Plan (the "1997 Plan"). The 2007 Plan provides for the grant of incentive stock options, nonstatutory stock options, restricted stock awards, restricted stock unit awards, stock appreciation rights, performance stock awards and other stock awards to employees, directors and consultants. As of December 31, 2007, the maximum number of shares that may be issued under the 2007 Plan was 10,800,539 shares, which consists of the shares remaining available for issuance under the 1997 Plan, including shares subject to outstanding options under the 1997 Plan. Pursuant to the 2007 Plan, the exercise price for incentive stock options and nonstatutory stock options is generally at least 100% of the fair market value of the underlying shares on the date of grant. Options generally vest over 48 months measured from the date of grant. Options generally expire no later than ten years after the date of grant, subject to earlier termination upon an optionee's cessation of employment or service.

The following table summarizes option activity under the Company's option plans (prices are weighted-average prices):

	Year Ended December 31,							
	2007				2006			
	Shares	Price	Weighted-average remaining contractual term	Aggregate Intrinsic Value in (\$000)	Shares	Price	Weighted-average remaining contractual term	Aggregate Intrinsic Value in (\$000)

The weighted-average grant-date fair value of options granted for the twelve months ended December 31, 2007 and 2006 was \$12.44 and \$13.20, respectively. The total intrinsic value of options exercised during the twelve months ending December 31, 2007 and 2006 was \$20.5 million and \$3.4 million, respectively. During

POWER INTEGRATIONS, INC.

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS (Continued)

2007 the Company extended the exercisable date for 80,000 fully vested share options held by one former director. As a result of the modification, the Company recognized additional compensation expense of approximately \$25,000 for the year ended December 31, 2007.

Option activity was as follows for the fiscal year ended December 31, 2005:

	<u>Shares</u>	<u>Price</u>
Options outstanding, Beginning of year	6,689,279	\$18.99
Granted:		
Below fair market value	138,668	\$21.08
At fair market value	1,409,181	\$18.14
Total granted	1,547,849	\$18.40

Cancelled	(253,204)	\$21.79
Options outstanding, end of year	<u>7,569,854</u>	\$19.09
Vested and exercisable, end of year	<u>4,950,914</u>	\$17.97
Weighted-average fair value per option granted below fair market value		<u>\$15.77</u>
Weighted-average fair value per option granted at fair market value		<u>\$12.91</u>

Options issued under the 1988, 1997 and 1998 plans may be exercised at any time prior to their expiration. The Company has a repurchase right that lapses over time, under which it has the right, upon termination of an optionholder's employment or service with the Company, at its discretion, to repurchase any unvested shares issued under the 1988, 1997 and 1998 plans at the original purchase price. Under the terms of the option plans, an option holder may not sell shares obtained upon the exercise of an option until the option has vested as to those shares. As of December 31, 2007, 2006 and 2005, there were no shares of common stock issued under the 1988, 1997 and 1998 plans that are subject to repurchase by the Company. Options issued under the Directors Plan are exercisable upon vesting.

The following table summarizes the stock options outstanding at December 31, 2007:

<u>Options Outstanding</u>				<u>Options Vested and Exercisable</u>

POWER INTEGRATIONS, INC.

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS (Continued)

1997 Employee Stock Purchase Plan

Under the 1997 Employee Stock Purchase Plan (the "Purchase Plan"), eligible employees may apply accumulated payroll deductions, which may not exceed 15% of an employee's compensation, to the purchase of shares of the Company's common stock at periodic intervals. The purchase price of stock under the Purchase Plan is equal to 85% of the lower of (i) the fair market value of the Company's common stock on the first day of each two-year offering period, or (ii) the fair market value of the Company's common stock on the semi-annual purchase date. If the fair market value of the Company's common stock on any semi-annual purchase date within a two-year offering period is less than the fair market value per share on the first day of such offering period, then immediately following purchase of shares of the Company's common stock on that semi-annual purchase date, participants will be automatically withdrawn from the offering period and enrolled in a new two-year offering period beginning immediately thereafter. An aggregate of 2,000,000 shares of common stock is reserved for issuance to employees under the Purchase Plan. As of December 31, 2007, 1,609,300 shares had been purchased and 390,700 shares were reserved for future issuance. In April 2006, the Company temporarily suspended the Purchase Plan due to the Company's delisted status with the NASDAQ. In August 2007, subsequent to completing all delinquent SEC filings, the Company was relisted with the NASDAQ. The Company then reestablished employee payroll deductions for the Employee Stock Purchase Plan. The share purchase for these deductions occurred in the first quarter of 2008.

Non-employee Stock Options

In 2007, 2006 and 2005, the Company granted no non-employee options. As of December 31, 2007, there were no non-employee options outstanding.

Shares Reserved

As of December 31, 2007, the Company had 3,897,768 shares of common stock reserved for future issuance under stock option and stock purchase plans.

Impact of the Adoption of SFAS No. 123(R)

Prior to January 1, 2006, the Company accounted for its share-based employee compensation plans under the measurement and recognition provisions of APB 25. The following table presents the functional allocation of all share-based compensation and related expense included in the Company's operating expense captions that the Company recorded for the year ended December 31, 2005 (in thousands):

	Year Ended December 31, 2005
Cost of sales	\$ 405
Research and development	994
Sales and marketing	655
General and administrative	<u>1,064</u>
Total	<u>\$3,118</u>

POWER INTEGRATIONS, INC.

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS (Continued)

See Note 2, “Summary of Significant Accounting Policies,” in the notes to consolidated financial statements for a description of the Company’s adoption of SFAS No. 123(R) on January 1, 2006. The following table presents the functional allocation of all share-based compensation and related expense included in the Company’s operating expense captions that the Company recorded within the accompanying consolidated statements of income (in thousands):

	Year Ended December 31,	
	2007	2006
Cost of sales	1,268	\$ 1,250
Research and development	3,829	4,329
Sales and marketing	4,620	5,506
General and administrative	3,548	4,375
Total	\$13,265	\$15,460

The Company recorded \$13.3 million in pre-tax share-based compensation expenses, including expenses related to grants of stock options and purchase rights under the employee stock purchase plan during the year ended December 31, 2007. These expenses consisted of approximately \$12.2 million related to stock options, \$1.1 million related to our employee stock purchase plan, and approximately \$21,000 for net amortized compensation expense associated with capitalized inventory costs. The Company recorded \$15.5 million in pre-tax share-based compensation expenses, including expenses related to grants of stock options and purchase rights under the employee stock purchase plan during the year ended December 31, 2006. These expenses consisted of approximately \$15.2 million related to stock options and \$0.6 million related to our employee stock purchase plan, reduced by approximately \$0.3 million for capitalized compensation expense.

As of December 31, 2007, there was \$21.8 million of total unamortized compensation cost which includes estimated forfeitures related to non-vested share-based compensation arrangements granted under all equity compensation plans. Total unrecognized compensation cost will be adjusted for future changes in estimated forfeitures. The Company expects to recognize that cost over a weighted-average period of 2.29 years. As of December 31, 2007, the total compensation cost related to options, under the 1997 Stock Option Plan, to purchase the Company’s common stock but not yet recognized was approximately \$1.7 million. The Company will amortize this cost on a straight-line basis over periods of up to 0.6 years.

The Company received net proceeds of \$24.6 million from option exercises during the year ended December 31, 2007.

The Company estimates the fair value of options granted using the Black-Scholes option valuation model. The Company estimates the expected volatility of its common stock at the date of grant based on a combination of its historical volatility and implied volatility, consistent with SFAS No. 123(R) and Securities and Exchange Commission Staff Accounting Bulletin No. 107 (“SAB 107”). The Company estimates expected term consistent with the simplified method identified in SAB 107 for share-based awards granted during the fiscal year ended December 31, 2007. The dividend yield assumption is based on historical dividend payouts. The risk-free interest rate assumption is based on observed interest rates appropriate for the expected term of its employee options. The Company uses historical data to estimate pre-vesting option forfeitures (at an estimated forfeiture rate of 8.4% for the year ended December 31, 2007) and records share-based compensation expense only for those awards that are expected to vest. For options granted, the Company amortizes the fair value on a straight-line basis over the requisite service period of the options that is generally four years.

POWER INTEGRATIONS, INC.

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS (Continued)

The weighted-average fair value of options granted is estimated on the date of grant using the Black-Scholes option-pricing model with the following weighted-average assumptions used for share-based payment awards during the years ended December 31, 2007, 2006 and 2005:

	<u>2007</u>	<u>2006</u>	<u>2005</u>
Stock Options:			
Expected volatility	42%-49%	49%-52%	59%-85%
Risk-free interest rate	3.89%-4.78%	4.46%-5.00%	2.98%-4.49%
Expected life (in years)	6.03	6.03	6.03
Expected dividend yield	—	—	—
	<u>2007</u>	<u>2006</u>	<u>2005</u>
Employee Stock Purchase Plan:			
Expected volatility	36%	37%	47%
Risk-free interest rate	4.44%	4.44%	3.19%
Expected life (in years)	1.0	1.0	1.0
Expected dividend yield	—	—	—
Weighted-average estimated fair value of the purchase rights	\$12.22	\$6.81	\$8.94

For the year ended December 31, 2005 the Company accounted for forfeitures under SFAS No. 123 based on actual forfeitures.

Under SFAS No. 123, the fair value of stock options at the date of grant is recognized in earnings over the vesting period of the options. Had compensation expense been determined under a fair value method consistent with SFAS No. 123 and related interpretations, the Company's net income would have been decreased to the following pro forma amount (in thousands, except per share information) for the year ended December 31, 2005.

	<u>Year Ended December 31, 2005</u>
Net income, as reported	\$ 15,698
Add stock-based employee compensation expense included in reported net income, net of tax	2,383
Deduct total stock-based employee compensation expense determined under fair-value-based method for all awards, net of tax	<u>(18,487)</u>
Pro forma net loss	<u>\$ (406)</u>
Basic earnings per share:	
As reported	\$ 0.53
Pro forma	\$ (0.01)
Diluted earnings per share:	
As reported	\$ 0.51
Pro forma	\$ (0.01)

6. TAXES:

Payroll taxes, interest and penalties—In connection with the stock-based compensation adjustments, the Company determined that certain options previously classified as Incentive Stock Option, or ISO, grants were determined to have been granted with an exercise price below the fair market value of the Company's stock on

POWER INTEGRATIONS, INC.

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS (Continued)

the revised measurement date (see discussion under “Critical Accounting Policies” in Item 7). Under U.S. tax regulations, ISOs may not be granted with an exercise price less than the fair market value on the date of grant, and therefore these grants might not qualify for ISO tax treatment. The Company refers to these stock options as the “Affected ISOs.” The potential disqualification of ISO status exposes the Company to additional payroll related withholding taxes on the exercise of these Affected ISOs granted to U.S. employees, and penalties and interest for failing to properly withhold taxes on exercise of those options. The payroll taxes, interest and penalties were recorded as expenses in the periods in which the underlying stock options were exercised. Then, in subsequent periods in which the liabilities were legally extinguished due to statutes of limitations, the payroll taxes, interest and penalties were reversed, and recognized as a reduction in the related functional expense category in the Company’s consolidated statements of income. As of December 31, 2007 and 2006 the liability accrued for payroll taxes, interest and penalties totaled \$0.7 million, \$0.7 million, respectively.

Adoption of FIN 48

Effective January 1, 2007, we adopted the provisions of Financial Standards Accounting Board Interpretation No. 48, *Accounting for Uncertainty in Income Taxes* (FIN 48). Our liability for unrecognized tax benefits related to tax positions taken in prior periods is \$13.2 million (excluding interest). Upon adoption of FIN 48, there was an adjustment made to retained earnings of \$1.04 million. Additionally, we have classified the \$13.2 million of FIN 48 liabilities as follows: \$12.2 million from current taxes payable to non-current taxes payable and \$1.0 million from current taxes payable to non-current deferred tax asset.

Upon adoption of FIN 48, our policy to include interest and penalties related to gross unrecognized tax benefits within our provision for income taxes did not change. As of December 31, 2007, we had accrued \$1.71 million for payment of such interest and penalties, which is classified as non-current taxes payable. Interest and penalties included in our provision for income taxes was \$0.8 million in the year-ended December 31, 2007.

Reconciliation of the Beginning and Ending Amount of Unrecognized Tax Benefits

Unrecognized Tax Benefits Balance at January 1, 2007	\$13,220
Gross Increases for Tax Positions of Prior Years	\$ 5,896
Gross Decreases for Tax Positions of Prior Years	—
Settlements	—
Lapse of Statute of Limitations	—
Unrecognized Tax Benefits Balance at December 31, 2007	\$19,116

Our total unrecognized tax benefits as of January 1, 2007 and December 31, 2007 was \$13.2 million and \$19.1 million, respectively. Also, our total unrecognized tax benefits that, if recognized, would affect our effective tax rate were \$13.2 million and \$19.1 million as of January 1, 2007 and December 31, 2007, respectively. The settlement period for our income tax liabilities cannot be determined; however, they are not expected to be due within the next twelve months.

Income Taxes

U.S. and foreign components of income (loss) before income taxes were (in thousands):

	Year Ended December 31,		
	2007	2006	2005
U.S. operations	\$ 4,789	\$(16,523)	\$ 6,945
Foreign operations	29,762	26,281	15,206
Total pretax income	<u>\$34,551</u>	<u>\$ 9,758</u>	<u>\$22,151</u>

POWER INTEGRATIONS, INC.

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS (Continued)

Undistributed earnings of the Company's foreign subsidiaries of approximately \$77.6 million at December 31, 2007, are considered to be indefinitely reinvested and, accordingly, no provision for Federal income taxes has been provided thereon. Upon distribution of those earnings in the form of dividends or otherwise, the Company would be subject to both U.S. income taxes (subject to an adjustment for foreign tax credits) and withholding taxes payable to various foreign countries.

The components of the provision for income taxes are as follows (in thousands):

	<u>Year Ended December 31,</u>		
	<u>2007</u>	<u>2006</u>	<u>2005</u>
Current provision:			
Federal	\$ 9,041	\$ 4,070	\$ 6,798
State	(947)	493	199
Foreign	951	682	556
	<u>9,045</u>	<u>5,245</u>	<u>7,553</u>
Deferred provision (benefit):			
Federal	(2,070)	(3,866)	(942)
State	1,052	(1,009)	(158)
Foreign	(100)	(37)	—
	<u>(1,118)</u>	<u>(4,912)</u>	<u>(1,100)</u>
Total	<u>\$ 7,927</u>	<u>\$ 333</u>	<u>\$ 6,453</u>

The Company is entitled to a deduction for Federal and state tax purposes with respect to employees' stock option activity. The net reduction in taxes otherwise payable in excess of any amount credited to income tax benefit has been credited to additional paid-in capital. For 2007, 2006 and 2005, the benefit arising from employee stock option activity that resulted in a credit to additional paid in capital was approximately \$3.4 million, \$0.2 million and \$0.6 million, respectively.

The provision for income taxes differs from the amount, which would result by applying the applicable Federal income tax rate to income before provision for income taxes as follows:

	<u>Year Ended December 31,</u>		
	<u>2007</u>	<u>2006</u>	<u>2005</u>
Provision computed at Federal statutory rate	35.0%	35.0%	35.0%
State tax provision, net of Federal benefit	0.4	(7.1)	1.2
Research and development credits	(5.1)	(16.6)	(3.6)
Stock-based compensation	4.8	31.2	1.7
Foreign income taxed at different rate	(13.0)	(39.8)	(4.6)
Other	0.8	0.7	(0.6)
Total	<u>22.9%</u>	<u>3.4%</u>	<u>29.1%</u>

POWER INTEGRATIONS, INC.

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS (Continued)

The components of the net deferred income tax asset were as follows (in thousands):

	December 31,	
	2007	2006
Deferred Tax Assets		
Tax credit carry-forwards	\$ 4,740	\$ 5,708
Inventory reserves	549	563
Other reserves and accruals	2,659	1,435
Depreciation	938	837
Stock compensation	7,895	7,141
Acquired intangibles	22	—
	16,803	15,684
Deferred Tax Liability		
Foreign Taxes	(149)	—
Net deferred tax asset	\$16,654	\$15,684

In assessing the realizability of deferred tax assets, management considers whether it is more likely than not that some portion or all of the deferred tax assets will not be realized. The ultimate realization of deferred tax assets is dependent upon the generation of future taxable income during the periods in which those temporary differences become deductible. Management considers the scheduled reversal of deferred tax liabilities and projected future taxable income. The Company limits the deferred tax assets recognized related to certain highly-paid officers of the Company to amounts that it estimates will be deductible in future periods based upon the provisions of the Internal Revenue Code Section 162(m). Based upon the level of historical taxable income and projections for future taxable income over the periods in which the temporary differences are deductible, management believes it is more likely than not that the Company will realize the benefits of these deductible differences.

As of December 31, 2007, the Company had California research and development tax credit carryforwards of approximately \$7.5 million. There is no expiration of research and development tax credit carryforwards for the State of California. As of December 31, 2007, the Company had Federal research and development tax credit carryforwards of approximately \$2.1 million, which will expire in 2025, if unutilized.

Although we file U.S. Federal, U.S. state, and foreign tax returns, our major tax jurisdiction is the U.S. Our 2001—2006 tax years remain subject to examination by the IRS for U.S. Federal tax purposes. Currently, we are under examination by the IRS for our 2002 and 2003 tax years. There could be a significant change in the Company's uncertain tax benefits in the next twelve months depending on the outcome of the current IRS audit; however, the Company cannot reasonably estimate this amount.

The Company addressed the implications of Section 409A of the Internal Revenue Code by adjusting the exercise price of stock options deemed by the Company to have been granted at a discount from their fair market value. This resulted from the Company's determination that the measurement date for those options differed from the original date used as the measurement date for those options. Section 409A would have imposed significant additional taxes to the Company's employees on stock options granted with an exercise price lower than the fair market value on the date of grant that vest after December 31, 2004. The Internal Revenue Service has issued transition rules under Section 409A that allows for a correction, or cure, for options subject to Section 409A. The Company has allowed its current and former executive officers to amend their options to effect such a cure in 2006, and in the third quarter of 2007, the Company offered its employees who held outstanding options the opportunity

POWER INTEGRATIONS, INC.

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS (Continued)

to effect a cure of all affected stock options. In connection with this cure, the Company will make cash bonus payments in an aggregate amount of approximately \$0.8 million in 2008 to non-officer employees, which was reflected in accrued payroll and related expenses in the Company's consolidated balance sheet. The total bonus of \$0.8 million was allocated between stock-based compensation expense (\$0.4 million) and additional paid in capital (\$0.4 million) in accordance with SFAS 123R. The stock-based compensation expense is included in cost of revenues and operating expenses in the accompanying statement of income for the year ended December 31, 2007.

7. LEGAL PROCEEDINGS:

On June 28, 2004, the Company filed a complaint for patent infringement in the U.S. District Court, Northern District of California, against System General Corporation (System General), a Taiwanese company, and its U.S. subsidiary. The complaint alleges that certain integrated circuits produced by System General infringed and continue to infringe certain of the Company's patents. The Company seeks, among other things, an order enjoining System General from infringing the Company's patents and an award for damages resulting from the alleged infringement. On June 10, 2005, in response to the initiation of the U.S. International Trade Commission ("ITC") investigation (discussed below), the District Court stayed all proceedings. Subsequent to the completion of the ITC proceedings, the District Court temporarily lifted the stay. On December 6, 2006, System General filed a notice of appeal of the ITC decision as discussed below. In response, and by agreement of the parties, the District Court renewed the stay of proceedings pending the outcome of the Federal Circuit appeal of the ITC determination.

On May 9, 2005, the Company filed a Complaint with the ITC under section 337 of the Tariff Act of 1930, as amended, 19 U.S.C. section 1337. The Company filed a supplement to the complaint on May 24, 2005. The Company alleged infringement of its patents pertaining to pulse width modulation ("PWM") integrated circuit devices, which are used in power conversion applications such as power supplies for computer monitors. The Commission instituted an investigation on June 8, 2005 in response to the Company's complaint. System General Corporation filed a response to the ITC complaint asserting that the patents-in-suit were invalid and not infringed. The Company subsequently and voluntarily narrowed the number of patents and claims in suit, which proceeded to a hearing. The hearing on the investigation was held before the Administrative Law Judge ("ALJ") from January 18 to January 24, 2006. Post-hearing briefs were submitted and briefing concluded February 24, 2006. The ALJ's initial determination was issued on May 15, 2006. The ALJ found all remaining asserted claims valid and infringed, and recommended the exclusion of the infringing products as well as certain downstream products that contain the infringing products. After further briefing, on June 30, 2006 the Commission decided not to review the initial determination on liability, but did invite briefs on remedy, bonding and the public interest. On August 11, 2006 the Commission issued an order excluding from entry into the United States the infringing System General PWM chips, and any LCD computer monitors, AC printer adapters and sample/demonstration circuit boards containing an infringing System General chip. The U.S. Customs Service is authorized to enforce the exclusion. On October 11, 2006, the presidential review period expired without any action from the president, and the ITC exclusion order is now in full effect. On December 6, 2006 System General filed a notice of appeal of the ITC decision. Briefing was completed on July 23, 2007, and oral argument was heard by the U.S. Court of Appeals for the Federal Circuit on November 9, 2007. On November 19, 2007, the Federal Circuit affirmed the ITC's findings in all respects. Because System General did not file a petition for rehearing or rehearing en banc or petition the Supreme Court for certiorari within the time required to do so, the ITC decision is now final.

On October 20, 2004, The Company filed a complaint against Fairchild Semiconductor International, Inc. and Fairchild Semiconductor Corporation (referred to collectively as "Fairchild") in the United States District Court for the District of Delaware. In its complaint, the Company alleged that Fairchild has and is infringing four Power Integrations' patents pertaining to PWM integrated circuit devices. Fairchild denied infringement and asked for a declaration from the court that it does not infringe any Power Integration patent and that the patents

POWER INTEGRATIONS, INC.

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS (Continued)

are invalid. The Court held a claim construction hearing on February 2, 2006, and issued a claim construction order on March 31, 2006 which was favorable to the Company. The Court set a first trial on the issues of infringement, willfulness and damages for October 2, 2006. At the close of the first trial, on October 10, 2006, the jury returned a verdict in favor of the Company finding all asserted claims of all four patents-in-suit to be willfully infringed by Fairchild and awarding \$33,981,781 in damages. Although the jury awarded damages, and the Company will request the damages to be enhanced in view of the jury's finding on willfulness, at this stage of the proceedings the Company cannot state the amount, if any, which it might ultimately recover from Fairchild, and no benefits have been recorded in the Company's consolidated financial statements as a result of the damages award. Fairchild raised defenses contending that the asserted patents are invalid or unenforceable, and the court held a second trial on these issues beginning on September 17, 2007. On September 21, 2007, the jury returned a verdict in favor of the Company, affirming the validity of the asserted claims of all four patents-in-suit. Fairchild submitted further materials on the issue of enforceability along with various other post-trial motions, and the Court will address those issues along with the Company's motions seeking increased damages and attorneys fees, an accounting and interest on the damages award and a permanent injunction, in the coming months. Briefing on these various issues was completed on January 16, 2008, but the Court has not yet scheduled any hearing.

On April 11, 2006, Fairchild Semiconductor Corporation and Intersil Corporation filed a patent infringement lawsuit against the Company in the U.S. District Court for the Eastern District of Texas. The complaint asserted that the Company infringed on an old Intersil patent that Fairchild recently secured exclusive rights to assert against the Company but Fairchild and Intersil did not identify any specific products they believe infringe the patent. Fairchild and Intersil's lawsuit was flawed because both Fairchild and Intersil lacked standing to sue the Company and it was also duplicative of a portion of the Company's suit against Fairchild in Delaware, and the Company therefore filed a motion addressing both issues. The Texas Court granted the Company's motion to transfer the case to Delaware on March 6, 2007, and the case was transferred to Delaware and assigned to Judge Farnan, the presiding judge in the Fairchild case discussed above. The Company then renewed its motion to dismiss the case for lack of standing, the Court held a hearing on October 5, 2007, and the Court dismissed, without prejudice, Fairchild and Intersil's case against the Company on December 20, 2007. Fairchild and Intersil did not appeal the Court's dismissal within the time provided for such an appeal.

On June 14, 2007, the Company filed a complaint for patent infringement in the U.S. District Court, Northern District of California, against Shanghai SIM-BCD Semiconductor Manufacturing Limited, a Chinese company, and its U.S. sister corporation, BCD Semiconductor Corporation (referred to collectively as "BCD"). The complaint alleged that certain integrated circuits produced by BCD infringe certain of the Company's patents, seeking, among other things, an order enjoining BCD from infringing its patents and an award for damages resulting from the alleged infringement. The Company voluntarily dismissed the California case against BCD on October 15, 2007 and filed a substantially identical complaint against BCD in the United States District Court for the District of Delaware on October 15, 2007. On January 21, 2008, BCD moved to dismiss the Delaware action for lack of personal jurisdiction in favor of a declaratory judgment action it filed against the Company on the same patents in the U.S. District Court, Northern District of California, discussed in further detail below. Briefing on this motion is complete. On January 25, 2008, the Company moved for a preliminary injunction against further sales of the accused BCD products based on infringement of one of the three patents in suit. BCD's opposition to the motion is due on April 7, 2008, and the Company's reply is due April 28, 2008. The Court has set a hearing for the Company's motion for preliminary injunction and BCD's motion to dismiss on May 5, 2008.

On January 18, 2008, Shanghai SIM-BCD Semiconductor Manufacturing Limited, a Chinese company, and its U.S. sister corporation, BCD Semiconductor Corporation (collectively, "BCD") filed a complaint in the U.S. District Court, Northern District of California seeking a declaratory judgment of non-infringement and invalidity

POWER INTEGRATIONS, INC.

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS (Continued)

with respect to the three patents the Company asserted against BCD in the Delaware action discussed above. The Company has not yet answered the complaint, but BCD has stated that it will dismiss the California case in favor of the Delaware action if it does not prevail in its motion to dismiss the Delaware action.

On April 25, 2006, Kimberly Quaco, an alleged shareholder, filed a derivative complaint in the United States District Court for the Northern District of California, purportedly on behalf of Power Integrations, against certain of Power Integrations' current and former executives and members of its board of directors relating to the Company's historical stock option granting practices. On August 1, 2006, Kathryn L. Champlin, another alleged shareholder, filed a similar derivative complaint in the United States District Court for the Northern District of California purportedly on behalf of Power Integrations. On September 21, 2006, Christopher Deboskey, another alleged shareholder, filed a similar derivative suit in the United States District Court for the Northern District of California purportedly on behalf of Power Integrations. On November 30, 2006, Ms. Champlin voluntarily dismissed her suit. On December 18, 2006, the Court appointed Ms. Quaco's counsel as lead counsel and ordered that another purported shareholder, Mr. Geoffrey Wren, be substituted in as lead plaintiff. On January 17, 2007, the plaintiffs filed their consolidated complaint. On August 3, 2007, plaintiffs filed an amended consolidated complaint. The amended consolidated complaint alleges, among other things, that the defendants breached their fiduciary duties by improperly backdating stock option grants in violation of Power Integrations' shareholder approved stock option plans, improperly recording and accounting for the backdated options, improperly taking tax deductions based on the backdated options, and disseminating false financial statements that improperly recorded the backdated option grants. The amended consolidated complaint asserts claims for, among other things, breach of fiduciary duty, unjust enrichment, and violations of Section 10(b) of the Securities Exchange Act of 1934. On January 30, 2008, the parties agreed to settle the dispute. The settlement is subject to court approval. On February 1, 2008, plaintiffs filed a motion for preliminary approval of the settlement, and a hearing was scheduled for March 24, 2008.

On May 26, 2006, Stanley Banko, an alleged shareholder, filed a derivative complaint in the Superior Court of California, Santa Clara County, purportedly on behalf of Power Integrations, against certain of the Company's current and former executives and members of Power Integrations' board of directors relating to its historical stock option granting practices. On May 30, 2006, Joan Campbell, also an alleged shareholder, filed a derivative suit in the Superior Court of California, Santa Clara County, making the identical allegations asserted in the Banko lawsuit. On June 30, 2006, pursuant to a stipulation by the parties, the Court consolidated the two cases into a single proceeding and required plaintiffs to file an amended, consolidated complaint. Plaintiffs filed their consolidated complaint on August 14, 2006, in which plaintiffs named additional officers and former officers and KPMG LLP, Power Integrations' former auditor, as new defendants. The consolidated complaint alleges, among other things, that the defendants caused or allowed Power Integrations' executives to manipulate their stock option grant dates, that defendants improperly backdated stock option grants, and that costs associated with the stock option grants were not properly recorded in Power Integrations' financial statements. The complaint asserts claims for, among other things, insider trading, breach of fiduciary duty, gross mismanagement and unjust enrichment. On January 30, 2008, the parties agreed to settle the dispute. On February 28, 2008, the parties submitted a stipulation to the Court requesting that the action be stayed pending the final order approving the settlement and entry of the final order and judgment in the Quaco Action.

On May 23, 2006, the U.S. Attorney's Office for the Northern District of California, or the DOJ, issued a grand jury subpoena to the Company directing that it produce documents relating to the granting of stock options from 1995 through the present. Subsequently, the government made a number of requests for the Company to voluntarily produce documents relating to, among other things, the Company's stock option practices. The government also conducted voluntary interviews of certain current and former officers and employees. The Company cooperated fully with the DOJ. The SEC was also conducting an investigation, but the Company has recently been informed by the staff of the SEC that they have terminated the investigation and are not recommending enforcement action be taken against it.

POWER INTEGRATIONS, INC.

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS (Continued)

The Internal Revenue Service, or IRS, is conducting an audit of the Company's 2002 and 2003 tax returns. The IRS has issued a number of Notices of Proposed Adjustment to these returns. Among other things, the IRS has challenged several aspects of the Company's research and development cost-sharing arrangement, which was put into place on November 1, 2003. While the Company has agreed to some of the adjustments proposed by the IRS, it disputes other proposed adjustments.

There can be no assurance that the Company will prevail in its litigation with System General, Fairchild or BCD. This litigation, whether or not determined in the Company's favor or settled, will be costly and will divert the efforts and attention of the Company's management and technical personnel from normal business operations, potentially causing a material adverse effect on its business, financial condition and operating results. In addition, the Company is unable to predict the outcome of the other legal proceedings described above. Adverse determinations in litigation could result in monetary losses, the loss of the Company's proprietary rights, subject the Company to significant liabilities, require the Company to seek licenses from third parties or prevent the Company from licensing its technology, any of which could have a material adverse effect on the Company's business, financial condition and operating results.

8. ACQUISITION:

On December 31, 2007, the Company acquired Potentia Semiconductor Corporation, or Potentia, for cash consideration of approximately \$5.5 million, including closing costs. The Company used the purchase method of accounting. Since the acquisition date occurred on December 31, 2007, no results of operations for Potentia were included in the Company's 2007 statement of operating income.

The Company allocated the purchase price of the acquisition to tangible assets, liabilities and intangible assets acquired, including in-process research & development charges, based on their estimated fair values. The excess purchase price over those fair values was recorded as goodwill. The fair value assigned to assets acquired is based on valuations using management's estimates and assumptions. The Company does not expect goodwill recorded as a result of this acquisition to be deductible for tax purposes.

Potentia is a developer of innovative controller chips for high-power AC-DC power supplies. Potentia's engineering team, based in Ottawa, Canada, will form the core of a new analog design group for Power Integrations focused primarily on high-power applications.

The Company's supplemental pro forma operating results are presented below as if the acquisition of Potentia had been completed on January 1, 2006 (in 000):

	Year ended December 31,					
	2007			2006		
	As reported	Adjustment for Potentia	(Unaudited) Pro forma income data including Potentia	As reported	Adjustment for Potentia	Pro forma income data including Potentia
Net revenue	\$191,043	\$ 439	\$191,482	\$162,403	\$ 462	\$162,865
Income before extraordinary item(a)	34,551	(600)	33,951	9,758	(3,131)	6,627
Net income	<u>\$ 26,624</u>	<u>\$ (565)</u>	<u>\$ 26,059</u>	<u>\$ 9,425</u>	<u>\$(3,085)</u>	<u>\$ 6,340</u>
Earnings per share:						
Basic	\$ 0.92	\$(0.02)	\$ 0.90	\$ 0.32	\$ (0.10)	\$ 0.22
Diluted	\$ 0.85	\$(0.02)	\$ 0.83	\$ 0.31	\$ (0.10)	\$ 0.21

POWER INTEGRATIONS, INC.

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS (Continued)

- (a) The unaudited pro forma supplemental information is based on estimates and assumptions, which we believe are reasonable; it is not necessarily indicative of our consolidated financial position or results of income in future periods or the results that actually would have been realized had we been a combined company during the periods presented. The adjustments for Potentia in 2007 consist primarily of Potentia's operating results, net of; (1) the reversal of an in-process R&D charge, now reflected in 2006, (2) adjustments to payroll and related expenses to reflect the number of employees hired as a result of the acquisition, (3) stock-based compensation charges for those employees and (4) amortization of the above mentioned intangibles. The adjustments for Potentia in 2006 consist primarily of Potentia's operating results, net of; (1) the impact of an in-process R&D charge, (2) adjustments to payroll and related expenses to reflect the number of employees hired as a result of the acquisition, (3) stock-based compensation charges for those employees and (4) amortization of the above mentioned intangibles.

The aggregate purchase price was approximately \$5.5 million, including closing costs. Of that amount, \$0.5 million remains in an indemnity escrow account. Per the terms of the purchase agreement \$0.5 million will remain in such escrow account for any damages incurred in connection with the transactions contemplated by the purchase agreement directly or indirectly by any indemnitees or to which any of the indemnitees may otherwise directly or indirectly become subject for a period of 12 months.

The following table summarizes the estimated fair values of the assets acquired and liabilities assumed at the date of the acquisition (in thousands).

	December 31, 2007
Current assets	\$ 801
Property, plant and equipment, net of accumulated depreciation	46
Intangible assets:	
Goodwill	1,824
Amortizable intangible assets	1,610
In process research and development	1,370
Total intangible assets	4,804
Total assets acquired	5,651
Current liabilities	42
Long-term deferred taxes	149
Total liabilities assumed	190
Net assets acquired	\$5,461

Of the \$1.6 million of amortizable intangible assets, \$1.1 million was assigned to developed technology, with an estimated useful life of 7 years, and \$0.5 million was assigned to customer relationships with an estimated useful life of 5 years. The in process research and development of \$1.4 million was written off at December 31, 2007, and is reflected in operating expenses, under *in process research and development*, in the consolidated statement of income.

The purchase agreement included two of Potentia's building leases; the buildings are located in Ontario Canada, and include a lab, and research and development and office space. The total lease payments for 2008, 2009, 2010 and 2011 are approximately \$0.1 million for each of the years mentioned.

POWER INTEGRATIONS, INC.

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS (Continued)

9. LOAN TO SUPPLIER:

On August 30, 2005, the Company entered into a loan agreement with one of its suppliers to fund the implementation of new technology. The principal amount of the loan was \$10.0 million. The unpaid principal and interest is due on December 31, 2009. The loan is convertible into equity of the supplier upon certain conditions at the discretion of the Company. The interest rate will follow the one-year Treasury bill rate, and be reset at each anniversary of the closing date of the loan agreement. The loan principal is reflected in "Loan Receivable" in the accompanying consolidated balance sheet.

10. PREPAYMENT TO A SUPPLIER TO SECURE WAFER MATERIAL:

In August 2006, the Company entered into a wafer supply agreement amendment with its foundry, XFAB, which amends its previous agreement dated May 2003. The amended agreement includes a prepayment of \$2.3 million to XFAB to enable them to secure raw materials from their supplier. The Company included the remaining prepayment of \$0.6 million in "prepaid expenses and other current assets" in its December 31, 2007 consolidated balance sheet.

11. DISTRIBUTOR PRICING CREDIT RECOVERY:

In April 2006, the Company recorded \$3.4 million in revenue related to a settlement agreement negotiated with one of its distributors. The Company performed an audit of distributor pricing credit requests, and discovered discrepancies in the supporting documentation the distributor supplied during such audit. In April 2006, this distributor reimbursed the Company \$3.4 million for discrepant credit requests. The Company subsequently cancelled its distribution relationship with this customer in the second quarter of 2006.

12. SELECTED QUARTERLY INFORMATION (Unaudited)

The following tables set forth certain data from the Company's consolidated statements of income for each of the quarters in the years ended December 31, 2007 and 2006.

The unaudited quarterly consolidated financial statements have been prepared on the same basis as the audited consolidated financial statements contained herein and include all adjustments that the Company considers necessary for a fair presentation of such information when read in conjunction with the Company's annual audited consolidated financial statements and notes thereto appearing elsewhere in this report. The operating results for any quarter are not necessarily indicative of the results for any subsequent period or for the entire fiscal year.

	Three Months Ended							
	Dec. 31, 2007	Sept. 30, 2007	June 30, 2007	Mar. 31, 2007	Dec. 31, 2006	Sept. 30, 2006	June 30, 2006	Mar. 31, 2006(1)
	(unaudited)							
	(in thousands, except per share data)

Diluted	32,269	31,342	30,942	30,691	30,656	29,832	30,955	29,582

(1) For the three months ended March 31, 2006, the Company had a net loss. Diluted net loss per share is the same as basic net loss per share since the effects of potentially dilutive securities were anti-dilutive for the quarter-ended March 31, 2006.

POWER INTEGRATIONS, INC.

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS (Continued)

13. SUBSEQUENT EVENTS

In February 2008, the Company's board of directors authorized the use of up to \$50 million for the repurchase of the Company's common stock. Repurchases will be executed according to certain pre-defined price/volume guidelines set by the board of directors. Stock repurchases for this program commenced in February 2008, and there is no expiration date for this stock repurchase program.

SCHEDULE II

Valuation and Qualifying Accounts

The Company maintains an allowance for doubtful accounts for estimated losses resulting from the inability of customers to make required payments. This allowance is established using estimates formulated by the Company's management based upon factors such as the composition of the accounts receivable aging, historical bad debts, changes in payments patterns, customer creditworthiness, and current economic trends. Following is a summary of the activity in the allowance for doubtful accounts:

<u>Classification</u> (in thousands)	<u>Balance at Beginning of Period</u>	<u>Charged to Costs and Expenses</u>	<u>Deductions(1)</u>	<u>Balance at End of Period</u>
Allowances for doubtful accounts:				
Year ended December 31, 2005	\$ 281	\$ 67	\$ (7)	\$ 341
Year ended December 31, 2006	\$ 341	\$ 79	\$ (57)	\$ 363
Year ended December 31, 2007	\$ 363	\$ (86)	\$ (16)	\$ 261

<u>Classification</u> (in thousands)	<u>Balance at Beginning of Period</u>	<u>Charged to Costs and Expenses</u>	<u>Deductions(1)</u>	<u>Balance at End of Period</u>
Allowances for customer returns:				
Year ended December 31, 2005	\$ 101	\$ 525	\$ (498)	\$ 128
Year ended December 31, 2006	\$ 128	\$ 341	\$ (305)	\$ 164
Year ended December 31, 2007	\$ 164	\$ 38	\$ (77)	\$ 125

<u>Classification</u> (in thousands)	<u>Balance at Beginning of Period</u>	<u>Charged to Costs and Expenses</u>	<u>Deductions(1)</u>	<u>Balance at End of Period</u>
Allowances for ship and debit credits:				
Year ended December 31, 2005	\$2,492	\$20,006	\$(18,762)	\$3,736
Year ended December 31, 2006	\$3,736	\$48,956	\$(44,488)	\$8,204
Year ended December 31, 2007	\$8,204	\$59,160	\$(57,643)	\$9,721

- (1) Deductions relate to amounts written off against the allowances for doubtful accounts, customer returns and ship and debit credits.

SIGNATURES

Pursuant to the requirements of Section 13 or 15(d) of the Securities Exchange Act of 1934, the registrant has duly caused this Report to be signed on its behalf by the undersigned, thereunto duly authorized.
