Essex is committed to compliance with all federal, state, and local fair housing laws.

**ABOUT THIS REPORT**

Welcome to the first annual Environmental Social Governance (ESG) Report for Essex Property Trust, Inc. For the prior four years, we have published an annual Corporate Social Responsibility (CSR) Report. This renewed methodology for reporting provides a deeper and more holistic overview of our Company-wide ESG activities, and the data that supports our ESG efforts. Our adoption of ESG principles, metrics, and targets reinforces our position as the premier provider of West Coast apartment homes. This report demonstrates our achievements and progress in 2022 across all areas of our business and Company.

This ESG Report has been prepared in accordance with the Global Reporting Initiative (GRI) standards, the Sustainability Accounting Standards Board (SASB) standards and includes Task Force on Climate-related Financial Disclosures (TCFD). Please refer to the indexes at the end of this report for assistance in aligning our disclosures with the aforementioned standards. If you have comments or questions concerning this report, or more broadly about Essex’s ESG activities, please contact our ESG team at ESG@essex.com.

We underwent an assurance process on our 2022 environmental data, completed by LRQA (Lloyd’s Register Quality Assurance). The letter of assurance is included in the appendix of this document.

ESSEX PROPERTY TRUST, INC. (Essex) is a proven leader in West Coast apartments. We are a publicly traded, fully integrated real estate investment trust (REIT) that acquires, develops, redevelops, and manages multifamily apartment communities located in supply-constrained markets. We are the only public REIT dedicated exclusively to coastal metropolitan areas in California and Washington, areas with strong long-term growth and economic opportunities, along with limited new housing production. We are committed to the vibrant communities where we operate, and we continually push to innovate, improve, and add value to the lives of our residents, associates, and shareholders.

Our dedication to our core business of actively managing a unique portfolio of apartment communities on the West Coast, along with a disciplined capital allocation process, has produced exceptional returns to our shareholders for almost 30 years. Our experienced leadership team, research-driven approach to portfolio management, dedication to sustainability, and strong financial condition contribute to long-term value creation for our shareholders. For more information about Essex, our history, and our continued financial success, please visit our website at www.essex.com.

250+ Apartment Communities

1,750+ Essex Associates

$126 Dividends per share from 1994 to 2022

Value Creation Process

ACQUISITIONS & DISPOSITIONS
Acquisition and disposition transactions represent most of our investment activity as we seek to modify portfolio allocations in pursuit of rental growth using our proprietary research process.

CO-INVESTMENT PLATFORM
The co-investment platform provides an alternate form of capital, with the potential for providing a superior cost of capital compared to investments using the Company’s balance sheet.

STRUCTURED FINANCE
Investing in high-quality developments and stabilized properties within the Essex footprint yields enhanced risk-adjusted returns compared to development at certain points during the economic cycle.

DEVELOPMENT
Development provides the potential for higher risk-adjusted returns compared to acquisitions, while also improving the overall quality of the portfolio.

Who We Are

Our Mission Creating High-Quality Communities in Premier Locations

Our Vision Providing Great Communities in Which to Live, Work, and Invest

To bring the mission and vision to life we focus on our Core Values

+ Act with integrity
+ Care about what matters
+ Lead at every level
+ Seek fairness
+ Do right with urgency

Our Behavioral Values

We are driven by purpose
We embrace honesty
We pursue excellence
We see it, own it, do it

We attract and develop the best
We do great together
We support work-life balance
We are respectful and dependable
WE ARE DELIGHTED TO PRESENT OUR 2022
ESG Report, which is an expansion of our previ-
ous four CSR reports as we focus on providing a
data-centric look at our risks and opportunities
related to environmental, social, and governance
issues. While our ESG mission and values are un-
changed, we are enhancing our data capabilities,
which will enable our stakeholders—investors,
residents, and employees—to assess the impact of
the Company. We are excited to unveil a
suite of new goals to accelerate and focus our
environmental, social, and governance initia-
tives. We hope this report gives readers a strong
sense of Essex’s culture and commitment to ESG
best practices.

ENVIRONMENTAL
Building operations is responsible for 27% of
global CO₂ emissions, and the real estate industry
must evolve as the world seeks to reduce GHG
emissions and slow climate change. We have set
a goal to reduce our Scope 1 and Scope 2 GHG
emissions 35% by 2030 through a mix of usage
reduction, photovoltaic installations, and green
power purchases. Our buildings are located pri-
marily in California where water scarcity is top of
mind for our residents and us. As such, we pledge
to reduce our whole building water consumption
10% by 2030 through efficiency improvements
across our portfolio. To further minimize the Com-
pany’s impact on the environment, we are com-
mittting to diverting 50% of the portfolio’s waste
through recycling and composting programs by
2030. Through these goals, we commit to building
a more sustainable future.

SOCIAL
Facilitating the ability of our associates to provide
better customer service has always been a key
priority. In recent years, we have reenvisioned Es-
sex’s operating model with “Property Collections,”
transforming from operating dedicated teams at
individual properties to teams that cover a collec-
tion of properties. This allows each associate to
specialize in a specific function and combine re-
sources. As a result, we have been able to provide
more services to tenants while simultaneously of-
fering our associates more stability and a better
work-life balance.

Another top priority is the well-being of our as-
sociates; and in 2022 we introduced several new
benefits to safeguard the mental well-being of our
E-Team. We have rolled out a new mental health-
care partnership that provides free therapy and
other resources to our employees and their fami-
lies. We also expanded our parental leave program
to provide six weeks of leave to all associates who
are birth and non-birth parents, including families
created through adoption and foster care. We be-
lieve that employee well-being is integral to our
business and our community.

As a company dedicated to housing, we are
uniquely positioned to improve our communi-
ties by providing affordable housing, which we
achieve through several ongoing programs and
partnerships. First, we forgo approximately $30
million annually to provide 2,455 apartment
homes at below-market rents. Additionally, in
2022, the Company provided rent subsidies to
over 800 employees, at a total cost of approxi-
mately $5 million. We also continue to partner
with the Housing Industry Foundation (“HIF”) to
advance affordable housing within our commu-
nities. A partner for over 30 years, in 2022 we
contributed over $100,000 to HIF through our
Essex Cares program.

Essex Cares also supports our communities and
associates through non-housing philanthropy and
service. In 2022, we donated nearly $300,000
to numerous community groups throughout
California and Washington. Further, the Essex
team logged hundreds of volunteer hours in the
community—helping our neighbors and creating
connections.

GOVERNANCE
We are proud to announce that we have achieved
gender pay parity, with no statistical difference of
pay between genders.

In addition to pay parity, we have a strong diver-
sity track record: 60% of named executives and
40% of directors are women, 30% of the Board
self-identify as diverse, and 54% of managerial
positions self-identified as diverse. We continue
to invest in programs that create an inclusive en-
vironment where all employees are encouraged
to thrive, regardless of gender, race, disability, or
national origin. We provided 800+ hours of DEI
training to the E-Team last year. We also signed
on as a founding member of Nareit Foundation’s
Dividends Through Diversity, Equity & Inclusion
Giving Campaign. Our multiplicity makes our busi-
ness stronger.

Another critical aspect of our governance struc-
ture is risk management. The Board of Directors
leads our risk management work and is supported
by a cross-disciplinary team from all levels of the
Company. Our risk management process incorpo-
rates traditional business risks such as financial
and safety, along with the emerging field of physi-
cal and transitional climate risk. Our improvement
in safety-related risk management is particularly
notable, with a 26% year-over-year reduction in
workers’ compensation insurance claims.

All these achievements are possible because we
are committed to the foundational values of good
corporate governance and ethical business prac-
tices. I am proud of the work we’ve accomplished
in 2022 and excited about our plans to further
advance our ESG initiatives.

Angela L. Kleiman
President and CEO
AT ESSEX, OUR FOCUS is to provide safe, comfortable homes for our residents, fulfilling career journeys for our associates, and profitable returns for our investors. We employ a circular ESG strategy to minimize risk and maximize opportunities for us and our investors. We first assess our needs and evaluate opportunities. We then implement initiatives and analyze the results. This analysis feeds into periodic reevaluation of needs.

In order to carry out this strategy, we analyze data across all the core business areas of Essex. We collect environmental performance data and utility costs; survey residents and associates about their satisfaction levels with Essex; track employee learning and achievement; and monitor risk and safety metrics. We then analyze this data to determine how to progress toward our mission and improve investor returns. Additionally, we embed ESG into our due diligence process to ensure that all factors are considered prior to acquisition.

ENvironmental
The goals of our environmental initiatives are twofold. First, we seek to improve building performance, thereby increasing resident comfort while reducing operating costs and emissions. Second, we strive to minimize physical and transition climate risks. Through this dual lens, we see opportunities to increase investor returns through the strategic deployment of proven technologies that leverage tax credits and other incentives.

Social
Engagement with our residents, associates, and community is at the root of our social initiatives. Our residents are the core of our business model and creating great communities is our vision. We continually evaluate how to improve our resident satisfaction, which in turn decreases turnover and increases our net operating income (NOI). One of the most impactful ways to improve resident satisfaction is through our employees. We focus our efforts on employee engagement, including learning and development, performance management, wellness, and benefits. We foster an inclusive environment where we seek to.

1 from 2018 baseline
out ideas from our diverse workforce, understanding that our focus on equity is important to our success.

**GOVERNANCE**
We have built Essex on the foundational values of good governance, ethical behavior, risk management, and transparency. It begins with our business Code of Conduct, to which all employees, from operations staff to executives, are held accountable. We bring these high standards to how we engage with our stakeholders and our Board of Directors. We consider these values fundamental to our success and longevity.

ESG leadership at Essex begins at the very top with our President and Board of Directors. Each of our Board committees has ESG responsibilities, but it is our Nominating Committee that leads the efforts in overseeing our ESG strategy and goals. Employees at all levels are empowered to consider ESG in their work. It is through this intentional collaboration across Essex that we will succeed in our ESG goals.

### ESG Goals
We are excited to introduce a set of new goals for environmental, social and governance work. These goals focus our efforts on reducing our environmental impact, increasing the impact in our communities, and maintaining our commitment to equity.

We align our ESG strategy with the United Nations SDGs because we feel strongly that sustainable development helps to create a better future for all.

**SDG** | **TARGETS** | **RELEVANCE** | **ACTIONS IN 2022**
--- | --- | --- | ---
3 | We promote mental health and well-being for all. | We continually assess our benefits and wellness programs to provide the best support for our associates. | We expanded our benefits and wellness programs to include paid parental leave for all new parents and a new mental health support platform for all associates.
5 | We will achieve gender equality and empower all women and girls. | We provide an equal opportunity environment for our employees, offering opportunities that lead to reflecting a diverse workforce and inclusive leadership for women. | We will promote equal social and economic inclusion for all.
6 | We will ensure access to clean, reliable water for all. | We continually assess our assets for potential capital and maintenance improvements to reduce water usage at all our properties. | We provided over 800 hours of training to our employees covering DEI in the workplace and continued to support employee-led affinity resource groups including Women at Essex and Rainbow Alliance. As of 12/31/22, 40% of our Board is women and 60% of managerial positions are women.
7 | We will ensure access to affordable, reliable, sustainable, and modern energy for all. | We support our communities with a range of clean and efficient energy options that will promote the overall energy efficiency of our operations. | We will provide over 800 hours of training to our employees covering DEI in the workplace and continued to support employee-led affinity resource groups including Women at Essex and Rainbow Alliance. As of 12/31/22, 40% of our Board is women and 60% of managerial positions are women.
8 | We will promote productive employment and fair, equitable wages for all. | We support our associates and provide opportunities for productive roles within Essex. We promote opportunities and advancement for workers from marginalized groups. We encourage our vendors to do the same. | We expanded our benefits and wellness programs to include paid parental leave for all new parents and a new mental health support platform for all associates.
10 | We will reduce waste through recycling and composting. | We have aggressively pursued building and landscaping projects that reduce our water use. These include low-flow fixtures in common areas and unit turns, turf removal, and irrigation controls. | We will reduce waste through recycling and composting.
11 | We will make cities and human settlements inclusive, safe, resilient, and sustainable. | We have increased our on-site solar electricity production by 235% over our 2018 baseline. | We will take urgent action to mitigate climate change and its impacts.
12 | We will take urgent action to combat climate change and its impacts. | We have increased our on-site solar electricity production by 235% over our 2018 baseline. | We will take urgent action to combat climate change and its impacts.
14 | We will support the development of and invest in ESG technology solutions for the housing industry. | We will promote productive employment and fair, equitable wages for all. | We will support the development of and invest in ESG technology solutions for the housing industry.
16 | We will uphold ethical business practices at all times. | We support our communities with a range of clean and efficient energy options that will promote the overall energy efficiency of our operations. | We will continue to expand on our decades-long commitment to sustainability and investing in technologies that target an environmental benefit.

We expanded our benefits and wellness programs to include paid parental leave for all new parents and a new mental health support platform for all associates.

We will promote equal social and economic inclusion for all.

Our DEI committees actively work to foster an environment where we value the contributions of all our associates and encourage their leadership within Essex.

We will make cities and human settlements inclusive, safe, resilient, and sustainable.

We support the adoption of sustainable and alternative public transportation options by integrating our communities with major job hubs, contributing to sustainable cities.

We will reduce waste through recycling and composting.

We support recycling at 100% of our properties and composting all of our California properties.

We will take urgent action to combat climate change and its impacts.

We continuously evolve our operations to reduce our direct carbon footprint and support our residents in pursuing more sustainable ways of living and minimizing indirect carbon impacts.

We will support the development of and invest in ESG technology solutions for the housing industry.

We will continue to expand on our decades-long commitment to sustainability and investing in technologies that target an environmental benefit.

We co-launched and committed $10 million to a new ESG-focused “Housing Impact Fund” to support the growth and successful implementation of ESG solutions for the housing industry, including technologies that improve both the environmental and social outcomes of new developments and existing properties.

We will provide over 800 hours of training to our employees covering DEI in the workplace and continued to support employee-led affinity resource groups including Women at Essex and Rainbow Alliance. As of 12/31/22, 40% of our Board is women and 60% of managerial positions are women.

Stakeholder Engagement

Our stakeholders are the core of our business and we prioritize our engagement efforts accordingly. In addition to regular tenant and employee satisfaction surveys, we routinely seek input from a variety of stakeholders through materiality assessments. We use our findings to bolster relevant initiatives and outcomes to better serve our stakeholders.

Materiality Assessment

We completed a materiality assessment in 2022, an update to our inaugural assessment completed in 2019. We believe such assessments enable us to engage our stakeholders and hear their thoughts in a way that is quantifiable and analyzable. Our aim is to determine the ESG topics and issues that are most important to our stakeholders, particularly as the environment shifts. The insights gained from our ongoing assessments contribute to our ESG strategy and planning in 2023 and beyond.

A materiality assessment measures the ESG topics that our stakeholders find most important and impactful. Importance defines how integral a topic is to the organization’s overall mission and operations. Impact is the effect Essex can have on a topic. Together, these two rankings provide insight into the ESG topics where, according to our stakeholders, we should focus our attention and resources.
Materiality Matrix

**Environmental Performance**
- E1: Purchasing or generating energy from renewable sources
- E2: Tracking and reporting energy and water consumption
- E3: Scope 1 & 2 Emissions
- E4: Scope 3 Emissions
- E5: Energy Efficiency
- E6: Water Efficiency
- E7: Waste Reduction
- E8: Biodiversity
- E9: Green Building Certifications
- E10: Environmental Procurement Practices

**Social Performance**
- S1: Diversity transparency when hiring new employees
- S2: Diversity of governance bodies and workforce
- S3: Equal Pay
- S4: Occupational Health and Safety
- S5: Training of Health and Safety impacts
- S6: Customer Health, Safety and Privacy
- S7: Suppliers Screened using Social/Environmental Criteria
- S8: Engaging and Assessing/Monitoring the impacts of operations on local communities
- S9: Promoting Affordable Housing
- S10: Environmental Procurement Practices

**Governance Performance**
- G1: Reporting ESG Performance
- G2: ESG Responsibility and Accountability at the corporate level
- G3: Direct economic value generated and distributed by Essex
- G4: Climate-related Financial Risk
- G5: Including human rights clauses in investment agreements
- G6: Tracking and Reporting the Monetary Value
- G7: Monitoring and Preventing Fraud
- G8: Data Privacy and Security
- G9: Transparency and reporting of financial and ESG performance, ESG incorporation, regulatory compliance, or fines, etc.
- G10: Compliance with Laws and Regulations
- G11: Anti-Harassment

We surveyed four stakeholder groups in the 2022 assessment: investors, tenants, employees, and vendors. The stakeholder survey included 31 indicators, divided between environmental, social, and governance performance. The indicator topics were aligned with several industry-leading reporting frameworks: GRESB, TCFD, GRI, and SASB. Stakeholders indicated their perception of importance and impact of each topic on a sliding scale of 0–10, with 10 being the highest and 0 being “no opinion.”

The responses were then mapped with a methodology that accounts for the varying number of stakeholder responses.

1. Importance and impact scores for each question were averaged across each stakeholder group.

2. Stakeholder average scores were again averaged to produce a final importance and impact score for each question.

The methodology weighs each stakeholder group equally regardless of the number of respondents within any one group. All stakeholder groups are given equal consideration and the opinions of one stakeholder group with many responses will not outweigh another, smaller group.

The final, averaged scores were plotted in a scatter chart with impact along the X-axis and importance along the Y-axis. Data points farther to the right are thought to be more impactful, while higher data points are more important.
ONE OF ESSEX’S MAIN GOALS, as shown through our work over the past 15 years, is to invest in sustainable improvements at our properties in a way that prioritizes resident comfort, operating cost reduction, and investor returns. Sustainable construction and operations use fewer resources while providing satisfying and comfortable homes. We track return on investment (ROI) of our construction and improvement projects to ensure that results are in line with our expectations. We also use this quantitative data to thoughtfully inform future work.

<table>
<thead>
<tr>
<th>SUSTAINABILITY</th>
</tr>
</thead>
<tbody>
<tr>
<td>We established our Sustainability Department in 2008 with the mission to lower utility expenses through energy efficiency capital projects, bill auditing, and best practice guidelines. Over the intervening years, we have continued to invest in innovative, yet proven, technologies in service of that mission. Today the Sustainability Department works from a strategic playbook founded on our decade and a half of experience and data. We utilize a practical approach to undertake capital improvements as existing systems reach the end of their useful life. All sustainable capital improvements are evaluated to ensure that they are in line with our ROI guidance. We view these projects as “Revenue Generating” since they will create operational savings through time that is greater than the initial cost of the project. We find this financially prudent planning balances our goal to improve environmental performance with our responsibilities to our investors. An important piece of our improvement strategy is partnering with our utility providers to maximize the rebates we garner by completing these projects. In 2022, Essex totaled over $425,000 in utility incentives. Additionally, as a part of our comprehensive plan, when we onboard a property, our team develops a detailed plan to bring the asset up to our operating standards. As we look toward our next 15 years, we intend to focus on how to continue to improve environmental performance in ways that are most important and impactful to our residents and surrounding communities.</td>
</tr>
</tbody>
</table>
PV installations provide multiple financial advantages beyond our sustainability goals. PV systems lower our common area electric bills, which increases our NOI for those assets and provides protection against the volatility we are currently facing with utility pricing. We also take advantage of the 30% Investment Tax Credit, which increases the returns on these installation by several percentage points. In making the decision about where and when to install a system, we balance these economic advantages with cost data. The systems require large up-front capital investment, substantial maintenance costs, and ongoing operating expense such as cleaning and monitoring. Because we carefully balance these factors, we saw a 10.9% IRR in 2022.

We evaluate the potential risks vs. reward of our systems during planning, installation, and operation. While planning, we look at the potential energy generation, the age and condition of the roof, and local and federal regulations and incentives. During installation, we face the same material and labor supply challenges that are plaguing the construction and green power industries at large. After the systems are operational, we monitor our systems against projected generation and returns. We proactively monitor the performance of these systems to ensure that they are functioning within the design standards.

Since 2016, Essex has invested $52.8 million in photovoltaic (PV) systems in pursuit of our dual goals of reducing our dependence on brown energy and increasing our net operating income (NOI).

To reach our GHG emissions reduction goals, we need to reduce our energy usage while increasing the percentage of power we obtain from renewable sources. On-site PV solar systems are a major component of the latter strategy. Solar power also improves our performance in frameworks such as GRESB, CDP, and the forthcoming SEC regulations.
We recognize the urgency of addressing climate change and acknowledge that reducing the GHG emissions of the built environment will be critical to keeping temperature rise below the Paris Agreement threshold of 1.5C. Our newly developed energy reduction goal aims to be consistent with the Paris Agreement and set us on track for long-term GHG reduction across our portfolio. We work to systematically reduce our GHG emissions by first reducing our energy consumption where possible, then sourcing our energy needs from on- and off-site renewable resources, and finally purchasing green grid power. Through these initiatives, we have reduced our like-for-like electric usage by 10% since 2018, and reduced our grid power purchase by 30%.

To reduce energy usage, we have focused on the following capital improvement projects. Our measurement and verification processes demonstrate that these projects deliver the greatest energy savings with an investment that minimizes rent increases, and with an ROI that meets our fiduciary duty to investors.

- Lighting retrofits with energy-efficient fixtures and occupancy or daylight sensors as applicable
- Energy efficient appliance packages
- Pool heat pump installation
- HVAC equipment retrofit
- HVAC optimization
- Envelope efficiency

As the first step of our green power strategy, we install photovoltaic (PV) panels on available roof space to source as much electricity as feasible from on-site solar generation. We have installed 91 systems over the past 5 years. We now generate 9,653 MWh of power with on-site solar.

We buy offsets in the green grid market for 20% (15,589 MWh) of our electricity demand. In line with our balanced strategy, we buy green offsets as required to be in compliance with all applicable green power regulations.
We are aware that many of our assets are located in regions experiencing sustained drought conditions. As a result, water conservation is top-of-mind to us and our residents. We are continually implementing various capital improvement projects that work to reduce water consumption.

- Low-flow fixtures in apartments and common areas
- Drought-tolerant landscaping
- Efficient irrigation system design and operation
- Water-efficient HVAC equipment
- Water audits
- Leak detection monitoring

We track water usage at the whole building level at all our properties. With the cultural shift to working from home, we have seen an increase in our water usage since 2020. This rise has leveled off and we are working to develop a strategy around tenant outreach to encourage our residents to reduce their consumption.

Similar to our layered approach to operational GHG emissions reduction at our buildings, we take a multi-pronged approach to reducing transportation GHG emissions within our communities. We factor walkability and public transportation access into our acquisition and development due diligence process and invest heavily in EV infrastructure.

Essex first installed EV chargers at our properties in 2012. The initial installation was a dual port EV charging station located in San Diego, California. As electric vehicles became more prevalent and resident demand increased the Sustainability team began including EV charging installations in annual budgets. In 2021, Essex began installing both shared and "resident-reserved" EV charging stations. Reserved EV spaces are a differentiator in the marketplace because they reduce range anxiety (the fear of running out of EV power). Essex has developed an implementation plan to address the growing demand for EV charging.

We track water usage at the whole building level at all our properties. With the cultural shift to working from home, we have seen an increase in our water usage since 2020. This rise has leveled off and we are working to develop a strategy around tenant outreach to encourage our residents to reduce their consumption.

By completing the above projects, we have been able to generate a combined annual kWh savings of 6.7 million, which is enough to power approximately 600 single family homes for one year.

We have collected $10 million in rebates since 2009.
Villa Veneto Asset Life Cycle

WE ACQUIRED VILLA VENETO, located in San Jose, California, in 2017. Since then, we have reduced the common area grid energy consumption by 92.8% through a combination of efficiency measures and on-site solar.

Immediately upon close, we began planning a lighting retrofit that was completed the following year. The retrofit reduced energy usage by 37%. In 2018, we also installed rooftop PV panels that offset the remaining usage.

We employ similar strategies for all our acquisitions—looking for proven capital improvements that improve the building’s efficiency with a short return on investment window. Existing building stock composes a large percentage of our portfolio. Investments that improve the energy and financial performance of older buildings are an important component of a sustainability strategy.

\(^1\)2021 was chosen for the baseline year for water due to the effect the COVID-19 pandemic has had on our water usage. Due to increased “Work from Home”, we determined 2021 to represent the new normal for our properties.
Our Sustainability Department monitors national, state, and local laws and stays abreast of the rapidly changing regulatory environment, which could result in increased operating costs. We outline our regulatory and transitional risks in the Climate Change Risk and Opportunities section, below. In addition, we advocate at all levels of government for responsible, sensible legislation for the real estate and building industries. Please see the Governance section for more detail about how we work with Nareit and other industry groups to shape policy and programs in this area.

### Climate Change Risk and Opportunities

Risk assessment, including climate risk, is a core business function at Essex. At a Board level, our Audit Committee tracks and analyzes ESG and Enterprise Risk Management (ERM) risks, using a structure explained in the Governance section of this report.

We completed a Climate Risk Analysis in 2022 that outlines our physical and transitional risk over the short, medium, and long terms. See the accompanying table.

All our properties are located along the West Coast, which presents unique physical risks as well as a rapidly evolving regulatory environment. To address physical risks, we have created an interactive GIS map that charts the acute and chronic physical risks. At a Board level, our Audit Committee tracks and monitors our climate change risk over the long term, as a component of our overall risk management strategy and good governance responsibilities.

<td></td>
</tr>
</tbody>
</table>

### Physical Risks

- Increased storms could affect our apartment communities.
- Wildfires could threaten the viability and infrastructure of our apartment communities.
- Increased cooling degree days could increase energy costs for us and our residents.
- Heating degree days could increase energy costs for us and our residents.
- Drought / Precipitation variability could impact infrastructure around our apartment communities.

### Transition Risks

- Increased administrative costs associated with required climate disclosure regulations.
- Increased energy costs due to stringent renewable portfolio standards.
- Higher energy prices due to decarbonization of electric sector and grid development.

### Transitional Opportunities

- Align ESG and climate-related disclosure with voluntary disclosure frameworks.
- Expand capabilities and implement information management systems to monitor GHG emissions across the value chain, including Scope 3 emissions.
- Seek external assurance for key environmental and climate change performance metrics.
- Explore the viability of participating in Direct Access Lottery programs for purchasing power from competitive providers instead of regulated electricity utilities.
- Consider purchasing in demand response programs.
- Increase on-site renewable energy capacity (portfolio system size) and develop program to drive reductions in assets with highest energy usage intensity.
- Expand implementation of Crisis Management Planning and emergency preparedness focused on climate-related hazards and physical weather events.

### Medium Term

<table>
<thead>
<tr>
<th>Indicators</th>
<th>Medium Term: 3 to 5 years</th>
</tr>
</thead>
<tbody>
<tr>
<td>Long Term: 5 years or longer</td>
<td></td>
</tr>
<tr>
<td>Sea level rise could threaten the habitability of our apartment communities along the coasts.</td>
<td></td>
</tr>
<tr>
<td>Water stress could impact our water costs.</td>
<td></td>
</tr>
<tr>
<td>Reductions in value of real estate assets due to net meeting energy or carbon intensity expectations (stranded asset risk).</td>
<td></td>
</tr>
</tbody>
</table>

### Long Term

- Increase in administrative and compliance costs for meeting building benchmarking, audit, and retro-commissioning planning ordinances.
- Increase costs for energy and carbon retrofits due to changes in energy and carbon intensity requirements or regulations.
- Changes to renewable Incentive programs that could result in longer payback times for on-site renewable energy systems or deferral of funds available or termination of program.
- Increased development and renovation costs due to more stringent building and energy code regulations.
- Higher insurance costs and/or reduced availability of insurance coverage.
- Higher cost of materials for development projects due to carbon pricing programs.

### Time Indicators

- Prolonged extreme heat or cold days could impact energy consumption and costs.
- Riverine flood could cause damage to our facilities.
- Coastal flood could cause damage to our apartment communities.
- Increase in administrative and compliance costs for meeting building benchmarking, audit, and retro-commissioning planning ordinances.
- Increase costs for energy and carbon retrofits due to changes in energy and carbon intensity requirements or regulations.
- Changes to renewable Incentive programs that could result in longer payback times for on-site renewable energy systems or deferral of funds available or termination of program.
- Increased development and renovation costs due to more stringent building and energy code regulations.
- Higher insurance costs and/or reduced availability of insurance coverage.
- Higher cost of materials for development projects due to carbon pricing programs.

### Environmental Benefits

- Define scope of properties subject to ordinances and determine action plan for complying with new audit and retro-commissioning requirements.
- Explore and pursue actions that can lead to exemptions from energy audit and retro-commissioning processes within applicable ordinances.
- Develop monitoring system for applicable rebates/credits programs for energy efficiency, electrification, or renewable energy technology and solutions.
- Implement monitoring and energy storage systems.
- Continue program of providing PV solar energy to residents.
- Maximize the implementation of viable PV systems prior to robust of NEM 1.0 for grandfather in protections.
- Increase internal expertise in around designing and managing for net zero buildings.
- Expand implementation of climate-related risk and resilience screening within the due diligence process for acquisitions and developments.
- Leverage applicable incentive programs for increasing building resilience.
- Implement embedded carbon reduction strategies that limit the use carbon-intensive materials and explore low embodied carbon substitutes.
- Implement building energy efficiency programs for meeting building benchmarking, audit, and retro-commissioning planning ordinances.
- Maximize the implementation of viable PV systems prior to robust of NEM 1.0 for grandfather in protections.
- Increase internal expertise in around designing and managing for net zero buildings.
- Expand implementation of climate-related risk and resilience screening within the due diligence process for acquisitions and developments.
- Leverage applicable incentive programs for increasing building resilience.
- Implement embedded carbon reduction strategies that limit the use carbon-intensive materials and explore low embodied carbon substitutes.
- Implement building energy efficiency programs for meeting building benchmarking, audit, and retro-commissioning planning ordinances.
- Maximize the implementation of viable PV systems prior to robust of NEM 1.0 for grandfather in protections.
- Increase internal expertise in around designing and managing for net zero buildings.
- Expand implementation of climate-related risk and resilience screening within the due diligence process for acquisitions and developments.
- Leverage applicable incentive programs for increasing building resilience.
- Implement embedded carbon reduction strategies that limit the use carbon-intensive materials and explore low embodied carbon substitutes.
- Implement building energy efficiency programs for meeting building benchmarking, audit, and retro-commissioning planning ordinances.
PART OF OUR SUSTAINABILITY strategy is to design our new development projects with an array of green building features designed to minimize GHG emissions and water usage, increase waste diversion rates, and provide a healthy indoor environment for our residents. We design our buildings with LEED standards in mind and pursue green certifications whenever feasible.

+ Low/no VOC finishes
+ EV chargers
+ PV panels
+ Infrastructure for recycling and composting
+ Heat pump pool heater

LIVIA at Scripps Ranch, which opens in 2023, is an example of our sustainable development practice. Located in the sought-after neighborhood of Scripps Ranch in northeast San Diego, California, LIVIA is the newest addition to the Essex Apartment Homes portfolio and is pending LEED Silver certification.

Co-developed by Essex and Monarch Group, LIVIA at Scripps Ranch is a four-story luxury apartment community with 264 units, resort-style amenities, and access to some of the best San Diego has to offer. Its convenient location makes it easy for residents to walk to nearby shops, restaurants, and desirable outdoor spaces like Spring Canyon Park. The community is also close to an elementary school and is a quick 20-minute drive to many beach towns and downtown San Diego. LIVIA offers electric vehicle charging stations for residents looking to reduce their carbon footprint.

Residents will find elevated design and sought-after features inside each apartment home, including energy-efficient lighting and windows, low-flow EPA WaterSense-certified water fixtures, and high-efficiency HVAC and DHW systems. Water-efficient building features, such as conscientious landscaping and responsible plant adaptation, are also found throughout the community.

As Essex continues its commitment to creating more eco-friendly buildings, LIVIA at Scripps Ranch truly embraces sustainable living.
THE ESSEX VISION IS Providing Great Communities in Which to Live, Work and Invest. We believe that improving the experience for our residents and associates decreases resident turnover, increases employee productivity and retention, lowers operating and maintenance costs, and in turn drives higher returns for our investors. Over the past several years, we have invested in reorganizing many aspects of the Company to improve both the resident experience and the employee journey. These initiatives, which we continually validate through data collection and analysis, improve stakeholder engagement and reinforce our mission.

Social

In 2021 and 2022, we grouped our properties into collections based on geography. Each collection is managed by a dedicated team of employees. The reorganization focused on improving the experience for our residents, prospective residents, and associates. From a resident perspective, they experience a seamless interface with a team of Essex associates that are ready to assist them. The collection method gives associates the opportunity to specialize and focus on one aspect of the job, instead of being expected to be a jack-of-all-trades and manage a property alone. A larger team means they can share coverage—this allows us to be more responsive to our residents while simultaneously providing a better work-life balance for our associates.

The property collections also streamline our marketing and leasing to prospective residents. The collection organization allows us to have dedicated sales professionals responsible for each collection of properties. Along with software improvements, we now have a platform (SmartRent) where we can interact with prospective residents to schedule virtual and in-person tours, sign the lease, and arrange move-in.

In the transition to the collection model, employees were given opportunities to move into newly created positions and were offered training to support the transition. Essex associates had, on average, a 10% salary increase, and there was no need for layoffs.

In 2023, the operations department is focusing their attention on the vendors that service our properties. Using a strategic lens similar to what we used during our property collections development, we aim to add efficiencies to our vendor process and focus on local business and women- and minority-owned businesses.

In the transition to the collection model, employees were given opportunities to move into newly created positions and were offered training to support the transition. Essex associates had, on average, a 10% salary increase, and there was no need for layoffs.

In 2023, the operations department is focusing their attention on the vendors that service our properties. Using a strategic lens similar to what we used during our property collections development, we aim to add efficiencies to our vendor process and focus on local business and women- and minority-owned businesses.
Smart Home

Aligned with our goal to provide high-quality communities, we have embraced a digital transformation of the way people interact with their apartments as well as Essex staff. We continued to expand our SmartRent program throughout our portfolio in 2022. SmartRent integrates electronic door locks, remote thermostats, water-leak sensors, and smart plugs.

We have also invested in digital tools to improve and streamline our residents’ experience when they interact with Essex associates. A prospective resident can browse properties online, go on a virtual tour, and schedule a property visit. Funnel online leasing is now included at 27 communities with plans to expand. We are also adding lease renewals and enhanced payment processing to our system.

Current residents can contact Essex associates by phone, text, or email. On the associate side, we have an integrated web platform where we can respond to residents, log maintenance needs, and track progress on repairs. The platform has increased our efficiency, improved the resident experience, and reduced stress for our employees.

Affordable Housing Programs

In the markets where we operate, the availability of affordable housing is a critical component to economic growth. Essex takes pride in our ability to provide affordable housing across the portfolio, especially in areas where the need is high.

By the end of 2022, our direct development program encompassed four apartment communities, with 1,023 apartment homes under construction containing 76 affordable apartment homes. In these homes we are committed to maintaining rents at affordable levels, pursuant to an agreement with city governments that typically states that rents cannot exceed a specified percentage of area median income levels. In 2022, we provided affordable apartments at 43 communities and over $29 million in rent subsidies, covering nearly 2,500 affordable homes available at below-market rates for our lower-income residents. An additional 4,323 homes across 16 of our communities are locally rent stabilized.
Essex Cares

THE ESSEX CARES program is a framework through which we can put two of our core values into action: care about what matters and do right with urgency. We have structured the program with three distinct areas of focus: residents, associates, and community.

ESSEX CARES ABOUT RESIDENTS
In 2022, we continued our support of affordable housing through direct capital investment and by using our voice to advocate at the local level for affordable and discounted employee housing. We believe that our communities are stronger when everyone has an opportunity to afford a safe, welcoming home. We have partnered with the Housing Industry Foundation (HIF) for over 30 years to work toward increasing affordable housing in our communities.

Again in 2022, we worked with HIF’s Affordable Housing Initiative (AHI) program to offer housing subsidies at select communities, allowing public and nonprofit sector employees to live in the community where they work. AHI helps match qualified individuals and families with apartments at up to 50% below market rates for up to three years, and all current AHI residents can live in apartment homes less than a 30-minute commute to their jobs. On average, the reduced rent creates up to $12,000 per year in savings for each of these residents. We contributed approximately $90,000 in donated rent during 2022, providing affordable housing to eight households.

“Essex Property Trust has been an invaluable partner in HIF’s mission to prevent homelessness in Santa Clara and San Mateo Counties for over 30 years. As a Board Member and generous partner in the Affordable Housing Initiative, Essex has provided workers in the education and nonprofit sectors affordable housing, improving their quality of life and financial stability while allowing them to live in the communities they serve. Essex’s significant financial support of HIF, through our annual September Summit and most recently, our Major Gifts Campaign, has helped us to grow our programs and assist more families in need. Thank you for your support and partnership!”

STEVE SULLIVAN | EXECUTIVE DIRECTOR, HOUSING INDUSTRY FOUNDATION

We also completed the final phase of our HIF collaboration to relocate Fosters Landing residents as the affordable housing program in that community came to an end. Over the past two years, we have leveraged early relocation grants, short-term rental subsidies, hands-on case management, and HIF’s AHI program to transition 62 families to new homes.

ESSEX CARES ABOUT ASSOCIATES
The shift to a post-pandemic period has been a welcome change for our associates. We are proud that several of the Essex Cares initiatives implemented during COVID, such as extra refresh days for our associates, have found their way into our core business practices. 2022 brought its own challenges, one being a very strong inflationary environment. To help our associates meet expenses during this difficult time, Essex provided 80% of our associates with an inflation grant. We also invested approximately $5 million to provide subsidized housing to more than 800 associates in 2022.

ESSEX CARES ABOUT COMMUNITY
Our Community Assistance Program supports our local communities by making monetary, in-kind, and volunteer contributions to organizations focused on DEI initiatives, the environment, food insecurity, and the digital divide. We donated over $280,000 to community groups during 2022, including Habitat for Humanity, Human Rights Campaign, Akomi Dance Center, National Urban League, and local food banks. In addition to monetary contributions, Essex associates volunteered 444 hours at organizations such as St. Anthony’s Foundation in San Francisco, Martha’s Kitchen in San Jose, and the Mobile Gift Shop in Santa Paula, and Birthday Dreams in Kirkland.

One project of which we are particularly proud is our renovation of the Maitri Domestic Violence Shelter. In partnership with HIF, we provided a $10,000 donation, along with vendors and Essex volunteers to transform the shelter by refreshing the exterior garden and fencing, rehabbing the kitchen and bathroom, and fully painting the interior. This project combined our financial and manpower contributions to multiply our impact for Maitri.

“We had so much fun on the farm with the E-Team! Thank you, Essex, for allowing us this time to bond with our peers and give back to our community. The time spent at The Giving Farm has inspired me to give back even more on my own time!”

JODY LADD | LEASING CONSULTANT
Organization Supported: The Giving Farm

*It was an honor and privilege to be given the opportunity to volunteer at Maitri. I had tried to be a volunteer at Maitri some 10 years ago and because of their requirements and life in general, I gave up the idea to volunteer with this amazing organization. However, with the opportunity given by Essex, I am now not only an official volunteer with Maitri but also have completed my 40 Hour CA State Domestic Violence Certification requirements to be of further value to this organization. Thank you, Essex, for giving me this awesome opportunity.”

Organization Supported: Maitri

*“I had so much fun on the farm with the E-Team! Thank you, Essex, for allowing us this time to bond with our peers and give back to our community. The time spent at The Giving Farm has inspired me to give back even more on my own time!”

JODY LADD | LEASING CONSULTANT
Organization Supported: The Giving Farm
Employee Journey

We pride ourselves on being an employee-centric organization and view the associate experience as a journey that unfolds over the long term. We seek to engage, enable, and empower associates because thriving employees drive business performance.

We want to hear from employees and we design programs that respond to their concerns and ambitions. In 2022 we launched a new employee engagement survey platform that allows us to query employees about 10 engagement drivers, including how employees see their work as part of the larger Essex objectives and whether they feel supported in their work. Engagement is benchmarked externally to the industry (based on team size, demographic make up of the team, or geographical location) and against own company scores. In an effort to be transparent yet maintain anonymity, we share the results with all Essex employees, and leaders have access to dashboards where they can monitor their employees’ engagement on an anonymous basis.

We also use the results of these surveys to inform the programs that support our employees’ journeys. These programs can be described in six areas: learning and development, talent management, recognition, wellness, benefits, and diversity. All of our employee engagement programs are data-driven and have extensive monitoring and review processes. We monitor the engagement and ROI of each program, and make adjustments as necessary.

In addition to more structured feedback, we also value hearing ideas and contributions from all corners of the Company. We encourage associates to share their thoughts within and across teams. To facilitate this, we have implemented several methods including our Speak Up platform, where employees can candidly share their feedback, concerns, and ideas. Additionally, we hold monthly Company-wide webinars (Coffee Talk) hosted by our Senior Management Committee. Coffee Talk is open to all associates and provides an interactive panel discussion, open forum Q&A, and leadership updates.

Our goal with all of our associate programs is to create a company where employees feel valued, connected to our mission and objectives, and are active contributors to our success.

Talent and Performance Management

One important engagement driver for our employees is the opportunity to advance within Essex, so we strive to promote internally. We encourage employees to apply for open positions to advance their careers and direct hiring managers to consider current associates. We also strive to prepare associates for advancement through our performance review process, which provides actionable feedback and documents employee development over time, and the learning and development program, which builds associates’ skills. We aim to set up our associates for success so they feel prepared to apply for advancement and continue to contribute to our business.

Additionally, in the Senior Management Committee (SMC), consisting of Company SVPs and above, succession planning is presented to the Nominating Committee of the Board at least once per year and it is regularly discussed by the Board in its executive sessions. All SMC members must develop succession planning within their areas of responsibility and identify a potential successor as part of their annual strategic goals.

Performance management is a continuous process that supports our associates’ development by providing feedback, coaching, and recognition. The process is centered on setting, tracking, and evaluating goals for each associate. Associates each set goals and link their individual goals to those of Senior Management. By doing so, associates can see the strategic direction for the Company and understand how their job contributes to Essex’s mission and vision. Goal achievement and linkage is reviewed and analyzed later in the year. Managers use this analysis to provide actionable feedback that furthers an associate’s professional development and advancement.

Additionally, in 2022, we completed the rollout of our Career Profiles program that invites associates to upload their professional profile, including a résumé, awards, education, skills, and career aspirations, to a talent database. Managers monitor employee trends and individual profiles to better support our associates on their desired career paths. It also helps us identify interests and skill sets for new positions from our entire employee base, thereby opening opportunities to diverse candidates who may not have been considered before.

Learning and Development

We continue to make significant investments in support of our associates’ professional advancement through learning and development programs. In 2022, we overhauled the Learning Management System (LMS) that we use to identify training needs, deliver digital content, and record performance outcomes. The new LMS, which launched in autumn 2022 and is integrated across Essex, provides more impactful learning curriculum for our associates.

Employees now have access to thousands of digital and in-person trainings that can improve all aspects of their job performance, including leadership, software, building operations, and communications. Our LMS is integrated with our HCM system and uses artificial intelligence to recommend courses based on job role, professional interests, and identified areas for improvement. The LMS incorporates feedback from performance reviews and manager comments to direct employees toward course recommendations that can improve their journey here at Essex. Moving forward, we plan to monitor the performance and impact of the new system and make refinements where needed.

Total Rewards

Our rewards and recognition program is an opportunity to recognize milestones along our employees’ journey and celebrate associates who have shared a great idea, exhibited a winning mentality, invented a remarkable innovation, or have gone the extra mile to help a resident or fellow associate.

We offer several different types of financial rewards for outstanding performance in five key areas.

- Operational excellence
- Team player
- Customer service excellence
- Community and corporate superstar

Rewards in 2022, Totaling Nearly $1M

Emerging Leaders Program

Operated under the learning and development umbrella, our Emerging Leaders program develops high-achieving employees for leadership roles at Essex. Each year we select a cohort that has a particular focus, which allows us to tailor the program for a group of associates at a similar point in their journey. The 2021 cohort was made up of individual contributors in the operations department. In 2022, we invited corporate directors and senior managers to participate. Once chosen, the emerging leaders complete 90+ hours of training in leadership skills, including strategy and communication, delegation, time management, team development, and conflict resolution. Following completion of the program, we look to these individuals for promotions and other leadership opportunities with the Company.

“Emerging Leaders Program was challenging because it required me to think differently and commit differently to changing what I needed to change and appreciate what I was already skilled at. The program facilitator provided enormous insights into critical thinking and leadership development with focus on conflict resolution, communication styles, and management techniques. I walked out of this program as a much more confident and effective person, and I intend to use and further develop the leadership tools I have been given to further my career and personal relationships.”

BILLY PHAN | DIVISION MANAGER, REDEVELOPMENT

“The inflation has been hard and when I looked back at the grant that Essex gave us, it really made me grateful to work here. I feel like my pay matches my skillset and job duties. Our paid holidays are plentiful. Our LMS provides so much additional training and really good training at that. I feel trusted to do my job without being micromanaged or under a microscope, which I greatly appreciate. So, I just wanted to say thank you.”

ESSEX ASSOCIATE FEEDBACK
OUR EMPLOYEES’ WELL-BEING is central to our success as a company, so we have devoted significant investment to our wellness program, which is built around six pillars. Emotional wellness is at the center, surrounded by physical, financial, community, career, and social wellness.

In support of these pillars, we introduced two new wellness programs in 2022. The first is a paid parental leave to bond with a new child. This leave is available to all Essex birth and non-birth parents, including parents through adoption and foster care. Paid parental leave reinforces our commitment to supporting working families and creates a competitive, modern, and equitable workplace for parents.

We also introduced a new mental well-being benefit to intentionally solve for access issues within the mental health space and support our associates in their mental health journey. Through our partner, we offer a network of therapists and other mental health professionals who can provide easy access to high quality, personalized care to our associates and their families, free of charge. We hope this program provides our associates support to increasing their well-being during what continues to be a challenging time.

In addition, we continue to offer a comprehensive wellness program, Vitality, through which we encourage employees to engage in their wellness through financial incentives for team-based wellness challenges, health questionnaires, goal setting, biometric screenings, and healthy lifestyle education. As with all engagement programs at Essex, we track various metrics for these programs and continually refine them based on the data.

A major component of mental health is achieving a work-life balance. We acknowledge that different departments have different staffing needs and tailor policies accordingly. For our corporate employees, we have introduced flexible, hybrid arrangements that balance time in the office with remote work. Our operations staff need to be available to address on-site issues and therefore have less flexibility for hybrid work. Our Property Collections reorganization works to distribute operational work across staff and provide a more consistent work schedule. We have also given on-site employees additional paid refresh days. In 2023 we will continue to evaluate what the future of work looks like at Essex for all our associates.

“Not long ago, my family suffered three losses over six months, which took a significant toll on my mental health. With my dad’s passing, I also became the primary caretaker for my elderly mother. Thankfully, our EAP was there with free counseling sessions and the ARAG legal services, which allowed me to work to establish a trust for my mom. Plus, Essex programs include paid volunteer time, annual park passes, and education reimbursement programs, which I am currently utilizing to earn a master’s degree. The more I engage in wellness, the healthier and more balanced my life is.”

### Commitment to Human Rights

**ONE OF OUR CORE VALUES** is to treat all people with dignity, fairness, and respect. This extends to protecting human rights across our workforce and supply chain in alignment with the United Nations' Universal Declaration of Human Rights. Our Human Rights Statement outlines our commitment to preventing forced and child labor, discrimination and harassment, and inequality in all parties with whom we do business. Our suppliers and partners are expected to adhere to our human rights principles and replicate those standards within their own organization and value chain.

Per this policy, any grievances or violations of our Human Rights Statement may be reported to the Human Resources Department; Internal Audit Department; or through the Company’s anonymous and confidential hotline service, Convercent, at 1-800-461-9330. Convercent’s new technology utilizes a web portal and a dedicated hotline to better capture any anonymous reports.
Diversity and Inclusion

At Essex we embrace our diversity because it leads to better service for our residents and stronger business performance for our investors. Cultivating a sense of belonging for all Essex employees is engrained in our core values of Seek Fairness and Act with Integrity. We have built a strong foundation of encouraging and promoting the enhanced representation of women, people of color, military veterans, LGBTQ+, and disabled employees (across all intersecting identities) within the business and in leadership ranks. We actively invest in inclusion through management representation, our DEI Committee, associate training, employee resource groups (ERGs), company policies, and industry collaborations.

Essex is committed to pay equity and conducts a pay equity analysis on an annual basis. We developed a robust, multiple regression analysis model, which confirmed that we continue to maintain our gender pay parity. Our robust statistical analysis confirmed that gender was not a significant factor in determining pay decisions in 2022.

Inclusion starts at the top, and we are proud of the fact that our leadership and management teams come from a diverse set of backgrounds, experiences, and perspectives.

DEI Committee

We formed our DEI Committee in 2019 and expanded it into two teams in 2021: the Steering Team and the Action Team. The Steering Team sets the purpose and goals for the committee and is made up of senior and regional management from across our portfolio. The Action Team drives the work throughout our company and champions the committee’s vision. In 2022, we strengthened our outreach capabilities by doubling the size of the team to 21 members. The expanded Action Team organized awareness events (employee-led panel, pride, and keynote speaker events), shared resources via our communication channels, supported internal and external branding, engaged in volunteer activities and donations, and encouraged their peers to participate in our DEI trainings.

Over the past several years, we have partnered with a DEI training and consulting firm and invested in DEI training for all our associates. Initially, we rolled out a base training across our company. We now offer individualized training based on each employee and their role. Individual contributors reflect on how DEI affect them and their work, while managers learn how to lead a diverse group of employees in ways that are effective and inclusive. We collect feedback at each training and refine our curriculum to meet our evolving needs. The foundational training is supplemented by keynote speakers and employee-led events, especially those organized by our ERGs.

DEI Metrics

- 58% Female
- 42% Male
- 60% Of named executives officers are female
- 56% Of senior executives are female
- 336 Total Associates Receiving DEI Training
- 840 Total DEI Training Hours
A KEY COMPONENT OF OUR DEI Program is our ERGs, which are voluntary, employee-led associations open to all employees and sponsored by the DEI Committee. These groups play an important role in articulating, promoting, and supporting associates’ collective concerns, achieving DEI goals, and progressing an inclusive culture within the Company. Our ERGs also help to build relationships, empower collaboration, increase morale, provide insights, and enhance Company engagement efforts. We encourage future ERGs and have published a road map for our associates so they know how they can work to form a new group.

ESSEX’S COMMITMENT to strong corporate governance and integrated Board oversight is at the core of both our ESG and financial strategies and successes. Since our initial public offering (IPO) in 1994, we have maintained consistent, profitable returns for our shareholders while upholding our core values and high standards for performance and ethical behavior. It is our commitment to our stakeholders that guides our organization, ensuring that we will maintain sustainable, better returns for years to come.

Governance

Sustainable Returns

Essex has generated among the highest total returns of all public U.S. REITs in existence since its IPO in 1994 through year-end 2022. In 2023, we announced our 29th consecutive annual dividend increase, continuing Essex’s track record of increasing cash dividends as an S&P 500 Dividend Aristocrat. Our proven track record of delivering strong financial results is driven by our experienced leadership team’s dedication to our ESG mission and a disciplined capital allocation process. We invest in markets that generate the highest long-term rent growth, identified though our proprietary research process. We consider factors most important to our current and future residents — including proximity to major employment centers, local infrastructure, and access to high-quality services and amenities — when determining which communities to invest in. Our thoughtful investment decisions results in vibrant communities that provide our residents with an exceptional living experience and superior financial performance for stockholders.

Total Shareholder Return Since ESS IPO

- 7.7% FFO per Share CAGR through 2022
- 6.1% Dividend Growth CAGR through 2022
- 29TH Consecutive Dividend increase announced February 2023

2 Multifamily peer average includes five multifamily REITs (EQR, AVB, UDR, MAA, and CPT)
Our Board

Our Board leads our business and ESG performance at the highest level. We select our directors, based on their diverse relevant experience, in real estate, business, finance, administration, cybersecurity, ESG, and corporate governance. We also consider relevant non-professional factors like personality, integrity, and diversity. Four of our Board members have ESG experience and three have cybersecurity experience. Our Board conducts an annual self-evaluation process, as documented in our annual Proxy Statement. We do not have a tenure policy and refresh the Board consistently, with four new members over the past five years.

There are three committees on our Board: Audit, Compensation, and Nominating and Corporate Governance, two of which are led by women. Each committee has specific oversight related to corporate governance, ESG, and risk management, as outlined in the committees’ charters, which are available on the Corporate Governance website for more information on our climate risk assessment and strategy.

For more information regarding our secure and robust corporate governance strategy, please visit our Annual Report, Proxy Statement, and Corporate Governance Guidelines.

Audit Committee
The Audit Committee oversees the integrity of the Company’s financial statements; compliance with legal and regulatory requirements; independent auditor’s qualifications and independence; the performance of the internal audit function and independent auditors; and preparing an Audit Committee report, as required by the U.S. Securities and Exchange Commission (SEC). They also oversee our enterprise-level risk management (ERM) program, including ESG risks. They meet with senior management at least quarterly and review ERM, ESG, and cyber risks and the Company’s strategy for minimizing them.

Compensation Committee
The Compensation Committee oversees the compensation of the Company’s directors and executive officers, including evaluating and approving all compensation plans, policies, and programs for executive officers and non-executive employees. They ensure that our ESG goals and objectives, relevant to the CEO and other executive officers’ compensation, are appropriate, equitable, and reflective of our performance in the market.

Nominating Committee
The Nominating Committee determines Board qualifications, nomination, composition, and evaluation. This committee is also expressly responsible for reviewing our ESG strategy, goals, and initiatives and providing updates to the Board on our progress. They monitor current trends and practices related to corporate governance and ESG, and recommend strategies to advance. They also continually evaluate our succession strategy.

Internal Audit
We maintain a knowledgeable Internal Audit team that internally and independently reviews and audits key Company activities on a continual basis, helping us maintain and improve the effectiveness of our risk management, controls, and corporate governance. This team conducts audit tests and evaluates our internal controls for gaps and process efficiencies (some audits also include Sarbanes-Oxley [SOX] compliance) and prepares reports for the Audit Committee, senior management, and key process owners. They also provide recommendations for process enhancements and solicit feedback for final audit reports. In 2022, we added an ESG specialist to the audit team and began preparing for the upcoming SEC rules.

Policies

By publishing our ESG policies, we affirm our commitment to these standards. Essex associates, suppliers, and partners must comply with these policies. We periodically review and update our policies and guidelines with the Board to ensure that the needs of our stakeholders are being met. To read complete versions of the policies, please visit our Corporate Governance website.

Enterprise Risk Management (ERM)

Essex has a robust and well-integrated ERM function. Our ERM approach identifies and assesses risk across several risk areas, articulates mitigation efforts, and assigns ownership responsibilities to achieve those efforts. A Company-level ERM committee oversees ESG reporting, goal setting, and development of Essex’s ESG Report, while a Company-level ERM committee oversees the ERM strategy and objectives including ESG risks and mitigating strategies. These committees consist of senior leadership and subject-matter experts from across the Company.

In 2022, we completed our Climate Risk Analysis and have begun to incorporate climate risks into our ERM process. We will continue to expand this work in 2023 to ensure that we are adequately measuring and mitigating current and future climate risks. See the Environmental section for more information on our climate risk assessment and strategy.
Safety

One of our most effective ways to manage and mitigate risk has been to establish a culture of safety across Essex. Beginning in 2020, we began a coordinated effort to increase our awareness around safety and the trainings that we offer to corporate and operations staff. Our work has paid off with our level of insurance claims falling year over year.

Our new Property Collections reorganization has improved our safety and risk management because it allows our operations staff to become experts in one area of operations with additional training and experience—factors that reduce risk. We continually review, test, and adapt our operations and emergency procedures to ensure that they meet all applicable regulations, including OSHA, state and local laws, and recommendations from our insurance carrier and our legal team. Our internal emergency manual outlines our protocols to be followed in the event of natural disasters (floods, earthquakes, and fires), medical emergencies, loss of services, and other asset-related risks. In every community, an Emergency Preparedness Kit is readily available.

Safety starts with our on-site teams—they are responsible for implementing policies and take accountability for effectively handling emergencies to ensure the safety of our communities. In 2022, we provided safety training refreshers for current and new associates during electrical, HVAC, and plumbing courses. We have moved much of our training online so that it is more accessible and convenient for our on-site staff to attend. We also embed safety discussions into E-hours and coffee talks, making the conversation a continual part of the workday. We monitor workplace comp claims and organize additional trainings for teams with an above-average number of claims.

In February 2022, led by a best-in-class consulting firm, we conducted a tabletop exercise based on a cyberattack scenario that included more than 2 associates from 12 key departments. The exercise and scenario, identified through our ERM risk assessment, reviewed and refined the risk mitigation and recovery strategies documented in the CMPs. We plan to hold another tabletop exercise, based on a new ERM risk scenario, in 2023.

Keeping Data Secure

We take seriously our responsibility to protect all resident and employee data. All Essex employees, including all on-site staff, are required to attend annual cybersecurity training. We regularly review and update our cybersecurity practices and processes, including assessments conducted by an industry leading consultant in 2019 and 2022. We regularly conduct simulated phishing campaigns. Based on the results of those campaigns, we assign additional cybersecurity training, as needed. We regularly update these training sessions and campaigns based on the latest Information around cybersecurity and social engineering tactics.

We work closely with a third-party specialist to bring expertise to Essex and support our organization in protecting confidential Company data. Our monitoring tools continuously look for threats to our host or network, and we analyze and evaluate any identified threats against global databases of known threats and threat actors. We maintain an Operations Center team that reviews and monitors these threats 24/7. Since 2016, Essex has not had any cyber breaches nor incurred any expenses in connection with cyber breaches. In addition, we purchased cyber insurance to help defray the costs in the event of an information security breach.

Ethical Company

Act with Integrity is one of our core values and embedded into our corporate culture. All associates attend training about our Code of Business Conduct upon hire and then have a refresher course every two years. We build upon the Code to guide our ethical conduct, including our Anti-Fraud Policy, Anti-Bribery Policy, Conflict of Interest Policy, Anti-Sexual Harassment training, and Human Rights Statement. We monitor compliance with all these policies at every level of the Company, from associates to directors. To maintain confidentiality, we have an anonymous compliance hotline, Convercent.

Our strong commitment to ethical business extends to our Policy Regarding Contributions to State and local public officials and candidates. All direct or indirect contributions toward political campaigns require approval from our Compliance Manager. Our lobbying activities and disclosures comply with all federal regulations and are focused on advocacy for rental property owners. We are committed to doing business in an ethical manner at all levels of Essex.

One of our most effective ways to manage and mitigate risk has been to establish a culture of safety across Essex. Responsible Procurement

Our vendors are an extension of the Essex team. They help us maintain safe, clean, and inviting communities, which is integral to our financial and ESG success. We hire local vendors in part because they benefit the communities where we operate. We seek out vendors with sustainable operations because it helps reduce our GHG, water usage, and waste.

Above all, we work with responsible vendors that have acknowledged our Vendor Code of Conduct. We expect our vendors to comply with this code, and maintain the right to immediately remove any vendor that behaves in a manner that is unlawful or inconsistent with this code. We encourage our vendors to report potential violations from any party either anonymously through Convercent or by contacting our Internal Audit Department.

**Notes:**
- The energy usage and GHG emissions indicate cover areas under operational control, corresponding primarily to usage and emissions from corporate areas and shared services. Water usage corresponds primarily to whole building consumption. The absolute indicators energy, GHG emissions, and water include all communities that are owned and in operation in the reporting year. Like-for-like energy and water data includes communities that are managed and operational in all six reporting periods. Like-for-like waste data includes communities that are managed and operational in the last four reporting periods.
- The greenhouse gas emissions inventory has been developed using the GHG Protocol Corporate Accounting and Reporting Standard of the World Resources Institute and the World Business Council for Sustainable Development, including the use or emission factors provided by the Environmental Protection Agency.

ACCOUNTING METRIC
RESPONSE AND/OR LOCATION

ENERGY MANAGEMENT

IF-RE-130a.1 Energy consumption data coverage as a percentage of total floor area, by property subsector
- Energy consumption data covers 100% of our floor area under operational control, corresponding primarily to common areas and shared services.
- For additional information, refer to p. 62 - Supplemental Information/Environmental.

IF-RE-130a.2 (1) Total energy consumed by portfolio area with data coverage, (2) percentage grid electricity, and (3) percentage renewable, by property subsector
- (1) 322,300 MWh
- (2) 87.5%
- (3) 12%
- For additional information, refer to p. 62 - Supplemental Information/Environmental.

IF-RE-130a.3 Like-for-like percentage change in energy consumption for the portfolio area with data coverage, by property subsector
- -4%
- For additional information, refer to p. 62 - Supplemental Information/Environmental.

IF-RE-130a.4 Percentage of eligible portfolio that (1) has an energy rating and (2) is certified to ENERGY STAR, by property subsector
- (1) 1.67%
- (2) 0%
- For additional information, refer to p. 22 - Photovoltaic Systems, p. 27 - Efficiency Projects, p. 34 - Design and Construction

WATER MANAGEMENT

IF-RE-140a.1 Water withdrawal data coverage as a percentage of (1) total floor area and (2) floor area in regions with High or Extremely High Baseline Water Stress, by property subsector
- (1) 100% of total floor area. Water withdrawal corresponds primarily to whole building consumption.
- (2) 24,431,646 (6% of total leasable square feet).

IF-RE-140a.2 (1) Total water withdrawn by portfolio area with data coverage and (2) percentage in regions with High or Extremely High Baseline Water Stress, by property subsector
- (1) 3,044,756 KGal
- (2) 46%
- For additional information, refer to p. 62 - Supplemental Information/Environmental.

IF-RE-140a.3 Like-for-like percentage change in water withdrawn for portfolio area with data coverage, by property subsector
- -1%
- For additional information, refer to p. 62 - Supplemental Information/Environmental.

IF-RE-140a.4 Description of water management risks and discussion of strategies and practices to mitigate those risks
- Essex actively monitors water performance to identify conservancy and investment opportunities, as well as to detect inefficiencies. To address potential water stress and drive water use efficiency throughout the portfolio, conservancy goals have been established for reducing direct water use in common areas and indirect use throughout tenant-controlled areas and shared services. Strategies focus on improving resident awareness & engagement and investing in the implementation of native landscaping, smart irrigation technologies, and leak detection systems, as well as the installation of water-efficient appliances and low-flow solutions within resident homes.
- For additional information, refer to p. 27 - Water

MANAGEMENT OF TENANT SUSTAINABILITY IMPACTS

IF-RE-410a.1 Description of how building energy management considerations are integrated into property investment analysis and operational strategy
- Essex actively monitors and benchmarks energy performance throughout its portfolio and conducts quarterly financial/utility analyses to identify outliers and opportunities for implementing initiatives and technologies aimed at improving the energy efficiency and carbon footprint of our communities, as well as lowering utility expenses, predicting financial returns, and contributing to the long-term value of our assets. For all new developments, Essex pursues green building certifications and strategies that not only reduce the energy intensity and carbon impact of the buildings and its occupants, but also contribute to the overall climate resilience of our properties and capture the benefits of transitioning to a low-carbon economy.
- For additional information, refer to p. 22 - Photovoltaic Systems, p. 27 - Efficiency Projects, p. 34 - Design and Construction

IF-RE-410a.2 Description of climate change risk exposure analysis, degree of systematic portfolio exposure, and strategies for mitigating risks
- Essex completed a Climate Risk Analysis in 2022, which provided a more in-depth assessment of the climate-related risks we face and the potential solutions for mitigating such risks. The analysis explored the transitional and physical risks facing our portfolio.
- Following extensive research, we developed a risk profile, based on the ERM risk scale, to assess transition risk. For our physical risks, we built an interactive GIS map that leverages several databases to track physical climate risks in our property locations and provides a real-time look at each property’s physical risk profile. We established recommendations for physical and transition risk mitigation based on this analysis.
- Refer to our latest 13-F-K Report for additional risk factors associated with climate change.

CLIMATE change ADAPTATION

IF-RE-450a.1 Area of properties located in 100-year flood zones, by property subsector
- 3,270,712 (6% of total leasable square feet).

IF-RE-450a.2 Description of climate change risk exposure analysis, degree of systematic portfolio exposure, and strategies for mitigating risks
- For additional information, refer to p. 38 - Smart Home.

IF-RE-450a.3 Description of climate change risk exposure analysis, degree of systematic portfolio exposure, and strategies for mitigating risks
- Essex’s Smart Home program highlights smart home features such as electronic door locks, remote thermostats, water-leak sensors, and smart plugs. By using the latest high-performance, scalable, and future-proof technologies, this transformational strategy enhances our apartments and promotes efficient living for our residents. To further educate our residents on how they can support our wide range of sustainability and energy conservation initiatives, we include a “Green Community” addendum to all leases.
- Refer to p. 18 - Smart Home.
DOCUMENT 1:

**TCFD DISCLOSURE**

Describe how processes for identifying, assessing, and managing climate-related risks are integrated into the organization’s overall risk management.

**ESSEX PROPERTY TRUST ESG REPORT 2022**

---

**ESSEX PROPERTY TRUST**

**Goverance**

Board oversight of climate-related risks and opportunities

Essex’s commitment to strong corporate governance ensures oversight capabilities are maintained for both Environmental, Social, and Governance (ESG) and Enterprise Risk Management (ERM) risk at the Board level. Our Audit Committee oversees ERM, including ESG Risks, and our Nominating and Corporate Governance Committee oversees ESG goals and strategy. This dual reporting structure helps ensure that there are appropriate checks and balances relating to our ESG efforts.

**Strategy**

Describe the impact of climate-related risks and opportunities on the organization’s businesses, strategy, and financial planning.

As an owner and operator of multifamily apartment complexes, we are aware of the potential risks our climate change can have on our business. These risks include issues such as physical disruptions from weather-related events, rising insurance and energy costs, access to land for development, and the safety of our employees and residents.

We see this as a chance to leverage our understanding of climate risk to better identify potential investment opportunities and to inform strategic decisions on operations.

Since 2008, Essex's Sustainability department has ensured that we invest strategically in proven technologies focused on energy efficiency, renewable energy generation, and water conservation. Climate-related risks and opportunities have further influenced our sustainability strategy through solar photovoltaic systems to help us generate on-site clean energy, cool roofs to help minimize air conditioning use, LED retrofits to improve energy efficiency, and flood barriers to help prevent flooding in areas at risk. These efforts are utilized to ensure that we are managing climate-related risks across our enterprise.

---

**TCFD DISCLOSURE**

2022 DISCLOSURE

Describe the impact of climate-related risks and opportunities on the organization’s businesses, strategy, and financial planning.

**STRATEGY**

Describe the climate-related risks and opportunities the organization has identified over the short, medium, and long term.

See Climate Change Risk and Opportunities - p. 22

Describe the organization’s processes for identifying and assessing climate-related risks.

Essex is actively aware of the implications climate change can have on our business. The safety of our residents and the resilience of our assets are our top priorities. With properties in California and Washington, we understand that we are facing the threats of physical climate risks as well as a rapidly changing policy landscape that we need to be prepared to address. To understand the scope of these concerns, Essex commissioned a Climate Risk Analysis in 2022, which provided us with a more in-depth assessment of both the risks we are facing and the possible solutions for mitigating those risks. We are committed to putting those recommendations in place and ensuring the resiliency and longevity of all our properties.

The analysis explored the Transition and Physical risks facing our portfolio. To assess Transition risk, we completed extensive desktop research, surveyed our internal practices and benchmarks against the actions of our peer companies. With that analysis complete, a risk profile was developed based on the ERM risk scale and recommendations were established to address identified risks.

For our Physical risks, an interactive GIS map was built that accounts for the various physical risks that may threaten our holdings. This map leverages several databases that track physical climate risks in these areas and provides a real-time look at each property's physical risk profile. Recommendations were made based on that analysis for risk mitigation.

We further develop mitigation strategies for identified climate risks. These risks are then integrated into our larger ESG strategic planning and connected to our ESG goals. These efforts are utilized to ensure that we are managing climate-related risks across our enterprise.

---

**RISK MANAGEMENT**

Describe the organization’s processes for managing climate-related risks.

Essex’s Crisis Management and Business Continuity Planning and on-site Emergency Procedures Manuals contribute to the preparedness of our communities toward climate-related physical hazards that include fires, floods, and extreme weather events.

We further develop strategies to manage identified climate risks. These strategies are utilized to ensure that we are managing climate-related risks across our enterprise.

---

**SOCP**

Describe how processes for identifying, assessing, and managing climate-related risks are integrated into the organization’s overall risk management.

**ESSEX PROPERTY TRUST**

**2022 DISCLOSURE**

Describe the resilience of the organization’s strategy, taking into consideration different climate-related scenarios, including a 2°C or lower scenario.

We are actively integrating climate risk planning into our ERM universe so that we can more effectively identify and address climate-related risks and impacts associated with our business.

The findings from Essex’s recently completed Climate Risk Analysis will be used to inform scenario planning efforts that will guide our work to further reduce Essex’s greenhouse gas (GHG) emissions and to ensure that our portfolio is more climate resilient.

Essex’s sustainability goals, specifically our 2030 target focused on reducing Scope 1 and 2 GHG emissions by 35% against a 2010 baseline, have all helped Essex in our desire to contribute to the 2-degree scenario.

Over the course of 2023, we will be refreshing our ESG strategy and initiatives to further contribute to our strategy planning capabilities.

**TCFD DISCLOSURE**

Describe the organization’s processes for identifying and assessing climate-related risks.

Essex’s commitment to strong corporate governance ensures oversight capabilities are maintained for both Environmental, Social, and Governance (ESG) and Enterprise Risk Management (ERM) risk at the Board level. Our Audit Committee oversees ERM, including ESG Risks, and our Nominating and Corporate Governance Committee oversees ESG goals and strategy. This dual reporting structure helps ensure that there are appropriate checks and balances relating to our ESG efforts.

Describe how processes for identifying, assessing, and managing climate-related risks are integrated into the organization’s overall risk management.

Essex has developed a robust and well-integrated ERM function. The company’s ERM approach allows for both the identification and assessment of risk across a number of risk areas, and the articulation of mitigating efforts and associated ownership responsibilities to achieve these efforts. A company-level ESG committee oversees ESG reporting, goal setting and development of Essex’s ESG report and a company-level ERM committee oversees ERM strategy and objectives.

As we continue our efforts to develop and integrate ESG more completely into our business strategy, we are also looking to integrate climate risks into our ERM risk analysis. The completion of our Climate Risk Analysis sets the foundation for our initial risk analysis and the identified risk factors can now be included in annual assessments.

Our approach ensures effective governance, oversight of ESG strategy and risks and incorporation of mitigating strategies.

## METRICS AND TARGETS

Properties are assessed against 10 hazard categories which are broken into "acute hazard" and "chronic stressor" category as follows:

**ACUTE INDICATORS**
- Extreme Heat Days
- Storms
- Wildfires
- Riverine Flood
- Coastal Flood

**CHRONIC INDICATORS**
- Cooling Degree Days
- Heating Degree Days
- Drought / Precipitation Variability
- Water Stress
- Sea Level Rise

In addition, Essex tracks new policy or laws are expected to come into effect that could impact the portfolio in the future. Based on these discussions, assets are assessed and have budgets for anticipated regulatory changes.

Disclose Scope 1, Scope 2 and, if appropriate, Scope 3 greenhouse gas (GHG) emissions and the related risks.

Essex’s GHG emissions indicators cover areas under operational control, corresponding primarily to usage and emissions from common areas and shared services. We currently track limited Scope 3 emissions for approximately 50% of our portfolio using Energy Star Portfolio Manager® and disclose annually through GRESB Real Estate Assessment reporting. We are in the process of establishing additional systems to track and report Scope 3 emissions across our entire portfolio.

Refer to p. 62 - Supplemental Information/Environmental for Scope 1 and 2 GHG emissions.

LRQA Independent Assurance Statement

Relating to Essex Property Trust, Inc. (Essex) GHG Emissions, Water and Waste Inventories for Calendar Year 2022

This Assurance Statement has been prepared for Essex Property Trust, Inc. (Essex) in accordance with our contract.

LRQA was commissioned by Essex Property Trust, Inc. (Essex) to provide independent assurance on its greenhouse gas (GHG) Emissions, Water and Waste Inventories (“the Report”) for the Calendar Year 2022 against the assurance criteria below to a limited level of assurance using LRQA’s verification procedure and ISO 14064 - Part 3 for greenhouse gas data. LRQA’s verification procedure is based on current best practice and is in accordance with ISAE 3000 and ISAE 3416.

Our assurance engagement covered Essex operations and activities in the United States and specifically the following requirements:
- Verifying conformance with:
  - World Resources Institute / World Business Council for Sustainable Development Greenhouse Gas Protocol: A corporate accounting and reporting standard, revised edition (otherwise referred to as the WRI/WBCSD Protocol) for the GHG data\(^1\)
  - Evaluating the accuracy and reliability of data and information for only the selected indicators listed below:
    - Direct (Scope 1) and energy indirect (Scope 2) GHG emissions;
    - Energy Use;
    - Water use; and
    - Waste generated including landfilled, recycled and composted.

The Report excluded GHG emissions and energy use from diesel fuel combustion in emergency generators and mobile equipment; and GHG emissions from refrigerant leaks.

LRQA’s responsibility is only to Essex. LRQA disclaims any liability or responsibility to others as explained in the end footnote. Essex responsibility is for collecting, aggregating, analysing and presenting all the data and information within the Report and for maintaining effective internal controls over the systems from which the Report is derived. Ultimately, the Report has been approved by, and remains the responsibility of Essex.

LRQA’s Opinion

Based on LRQA’s approach nothing has come to our attention that would cause us to believe that Essex has not, in all material respects:
- Met the requirements of the criteria listed above; and
- Disclosed accurate and reliable performance data and information as summarized in Table 1 below.

The opinion expressed is formed on the basis of a limited level of assurance\(^2\) and at the materiality of the professional judgement of the verifier.

<tr>
<td>Waste (compost)</td>
<td>13.7</td>
<td></td>
</tr>
</tbody>
</table>

Note 1: Scope 2, Location-based and Scope 2, Market-based are defined in the GPG Protocol Scope 2 Guidance, 2015.

---

LRQA’s Approach

LRQA’s assurance engagements are carried out in accordance with our verification procedure. The following tasks were undertaken as part of the evidence gathering process for this assurance engagement:
- Reviewed an overview of the processes used at the corporate level for the management of data and information related to the Scope 1 and Scope 2 GHG emissions; energy use, water use; and waste generated;
- Interviewed relevant staff responsible for managing and maintaining data and information and for preparing the Report at the corporate level;
- Reviewed Essex processes for defining and collecting Scope 1 and Scope 2 GHG emissions, energy use, water use and waste generated data; and
- Verified the Scope 1 and Scope 2 GHG emissions, energy use, water use and waste generated for calendar year 2022 through a review of aggregated level data and information provided by Essex.

LRQA’s Standards, Competence and Independence

LRQA implements and maintains a comprehensive management system that meets accreditation requirements for ISO 14001:2004: Requirements for greenhouse gas validation and verification bodies for use in accreditation or other forms of recognition and ISO/IEC 17021:2015 Conformity assessment - Requirements for bodies providing audit and certification of management systems that are at least as demanding as the requirements of the International Standard on Quality Control 1 and comply with the Code of Ethics for Professional Accountants issued by the International Ethics Standards Board for Accountants.

LRQA ensures the selection of appropriately qualified individuals based on their qualifications, training and experience. The outcome of all verification and certification assessments is then internally reviewed by senior management to ensure that the approach applied is rigorous and transparent.

---

\(^1\) https://ghgprotocol.org/corporate-standard
\(^2\) Note: The extent of evidence gathering for a limited assurance engagement is less than for a reasonable assurance engagement. Limited assurance engagements focus on aggregated data rather than physically checking source data at sites. Consequently, the level of assurance obtained in a limited assurance engagement is lower than the assurance that would have been obtained had a reasonable assurance engagement been performed.
We commissioned Lloyd’s Register Quality Assurance (LRQA) to independently assure the accuracy and completeness of our 2022 water, waste, and GHG emissions data. LRQA’s review procedure is based on current best practices and in accordance with ISAE 3000 and ISAE 3410. For GHG emissions, LRQA provided a limited level of assurance in line with ISO 14064-Part 3.

FORWARD-LOOKING STATEMENTS
The data summarized in this report was sourced from responsible business units within the Company and Limited assurance provided by LRQA for 2022 environmental data. Certain information set forth in this report contains forward-looking statements, and though such statements are based on what the Company reasonably believes to be achievable, there can be no guarantee because actual results, and future events could differ. This material has been distributed for informational purposes only.
