POET Technologies Inc. (OTCQX: POETF)

Company Lays Out Milestones Schedule and Expects Revenues to Resume this Quarter

Given its unique product offering and large TAM we believe POET shares are worth \$1.80 based on peer multiples given no further equity dilution than forecast.

OUTLOOK

POET Technologies is a startup seeking to disrupt the photonics industry with a new design that eliminates parts of an optical transceiver and replaces them with a single integrated device which is smaller, cheaper and faster than the current solutions. It recently announced a \$50M joint venture with Sanan IC to make and sell optical engines to data centers and telecom. Its solution can be produced in a fab, eliminating costly manual steps, and allowing it to be easily produced in large quantities. We believe POET's platform can be applied to many other large photonics markets including high speed computing, co-packaged optics, augmented reality, LIDAR, and the Internet of Things.

Current Price (08/28/20) US\$0.39
Valuation US\$1.80

WHAT'S NEW

Last week POET Technologies held its annual meeting and gave a detailed view of its accomplishments and roadmap for the rest of 2020 and into 2021 when it plans to get to volume production of its first few products.

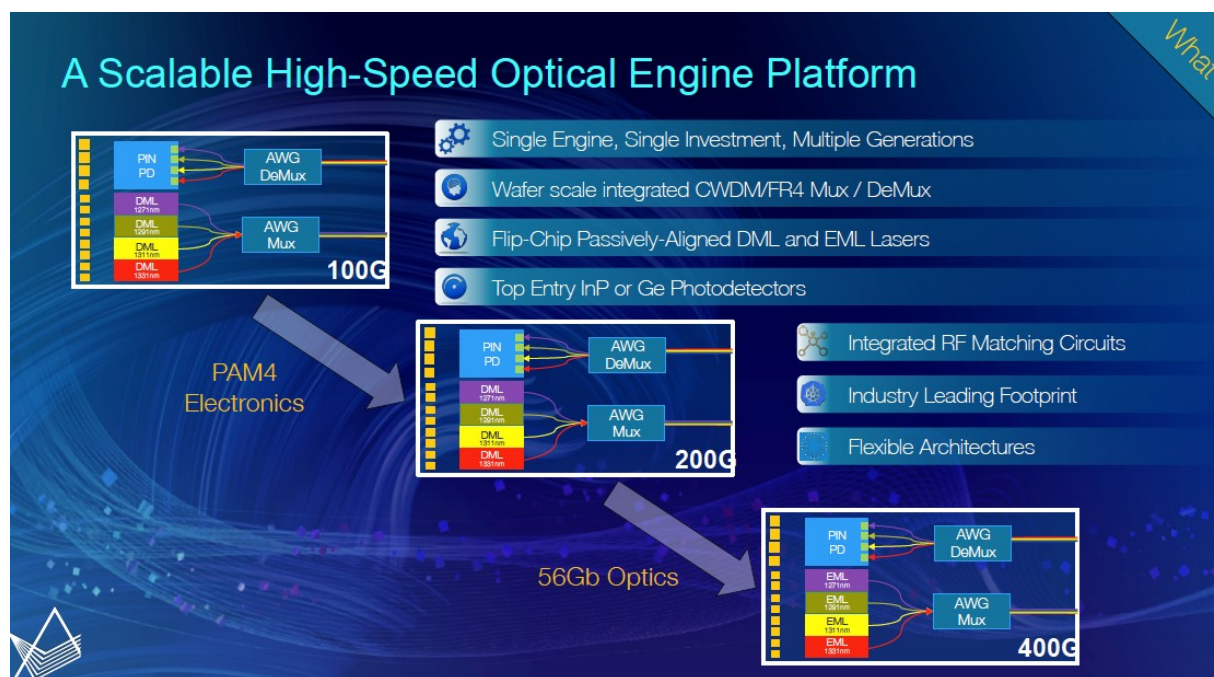

Q2 Results and Accomplishments

In Q2 the company accomplished three main milestones as shown below:

Quarter 2 2020	
	<ul style="list-style-type: none">Announced LOI for Joint Venture with Sanan IC, as a critical manufacturing outlet for POET's technology → established commercial viability of the platformCompleted DLS TransactionAugmented Optical Interposer IP portfolio

Source: POET Technologies

In Q2, the company was particularly proud of completing the design of a platform for Optical Engines that can span three generations of transceivers with minimal re-design and is much smaller compared to current products on the market. The platform is described in the following schematic:

Source: POET Technologies

Q2 2020 Earnings Report

In its second full quarter without DenseLight, POET spent \$3.5 million, the same amount as in Q1 2020. However in that number was \$328,000 one-time costs for expenses associated with POET's expansion into China. While spending could be down in Q3, we expect expenses to increase again in Q4 as the company adds more staff. In Q2 2020, the company paid \$229,000 in interest expense up slightly from Q1 2020. POET wrote off \$2.5 million in receivables from the renegotiated sale of DenseLight, resulting in a net loss of \$6.2 million for the quarter. The sale of DenseLight is now completed. Without that charge, the loss would have been \$3.7 million, the same as in Q1 2020. This resulted in an IFRS loss per share of \$0.02 per share and a non-IFRS loss of \$0.01 per share taking out the charge, one-time JV expenses and stock-based compensation. Shares outstanding increased 0.5% to 289.4 million.

Balance Sheet

POET Technologies ended the June quarter with \$11.9 million in cash and \$2.9 million in convertible debentures. Working capital was \$13.3 million. The company received its final payment of \$1 million for the sale of DenseLight on July 3 after the quarter ended. If the company burns \$2.5 million per quarter, that should get it fifteen months of runway even without any revenues. Any revenue from NREs will get it even further.

POET is also expecting that the outstanding warrants and exercisable options that are already in the money to add \$23.3 million in potentially available cash. As of today, there are 57.0 million warrants outstanding and 44.4 million are already in the money. Warrants already in the money could raise \$17.1 million dollars. There are also 52.8 million options outstanding of which, 22.0 million are exercisable and in the money and could raise \$6.2 million. So that totals to \$23.3 million.

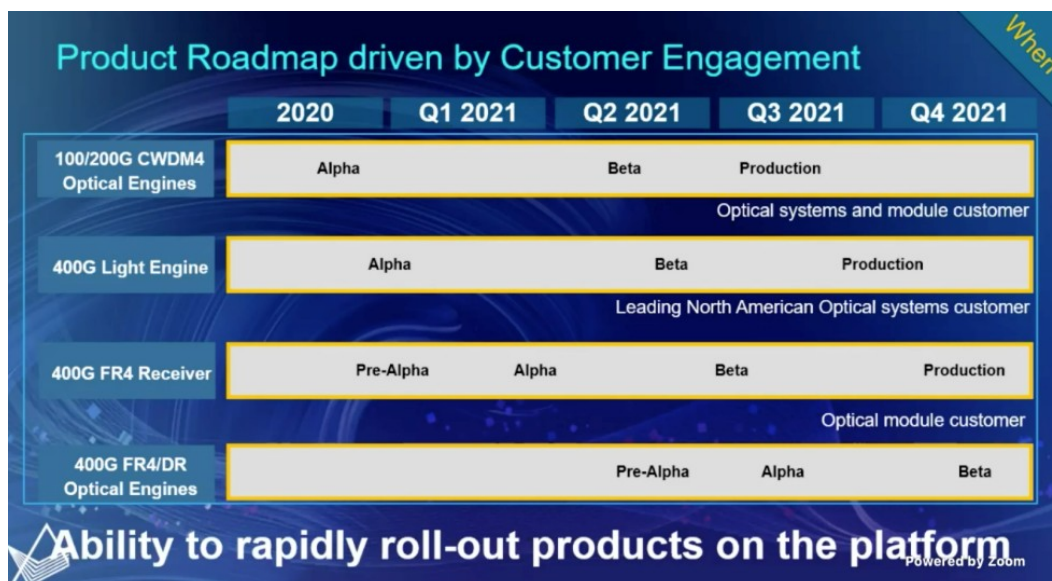

Q3 2020 Events

The major event in Q3 should be the signing of the joint venture agreement, which we expect to happen by the end of September. Since Q2 ended, the POET has already achieved a number of accomplishments as shown below:

Source: POET Technologies

POET has completed four product designs for three different potential customers. The first to go into production is expected to be the one for the about-to-close joint venture. Two of these designs are in the alpha stage and the company has sent samples to these customers and is now beginning to establish the production process and will be scaling up volume in the joint venture. In its labs in Pennsylvania and Singapore, engineers are testing devices and collecting data to demonstrate performance of the end product to customer specifications. Once the production process is established the devices will move into the beta stage, during which additional refinements will be completed. The three completed product designs, plus one that is only in a preliminary state, are shown in chart below with the expected timing for milestones to be achieved:

Source: POET Technologies

The first products are scalable 100/200G CWDM4 optical engines made for the joint venture and they are the furthest along. The design was completed and they are already in alpha even before the deal has closed. The joint venture partner is eager to make progress and the company hopes to reach beta testing by Q2 2021. The second two designs finished are 400G light engines for the same company. It is expected that some version of the newer of the two designs will be picked to go into production and the former could be used for a different client. The fourth design is for a small 400G FR4 receiver that is moving to alpha stage soon.

In addition to these products, the company is designing an interposer based light engine to be used in an AI processor, and expects to sign a customer for that product soon. It also hopes to sign a development and supply agreement this quarter. That product has not yet been placed on the roadmap above, as the deal has not closed.

Events investors may expect by quarter are shown in the table below:

The image shows a slide titled "Looking forward" with a blue background and a grid of four quarters. Each quarter lists key milestones and product goals. A small icon of a circuit board is visible in the bottom left corner of the slide.

Looking forward	
Quarter 4 2020	<ul style="list-style-type: none"> • Commence JV operations • New flip chip laser architecture for high accuracy passive alignment proven for product implementation • Pre-Alpha Product Prototypes for 100G/200G scalable optical engines and multiplexed Light Source products for 400G DR and FR applications • Incorporate POET Shenzhen and establish Product Reference Design capabilities
Quarter 1 2021	<ul style="list-style-type: none"> • 2nd Generation High Power CW CWDM multiplexed Light sources for 400G DR and FR applications • Live Product demonstrations at OFC 2021 • Strategic partnership for 400G Optical Engines using Si Photonics based modulators
Quarter 2 2021	<ul style="list-style-type: none"> • Beta 100G/200G Products for customers and customer qualification • Alpha Customer samples of 400G FR4 Receivers
Quarter 3 2021	<ul style="list-style-type: none"> • Beta (production ready) 400G DR and FR multiplexed Light Sources • Alpha 400G Optical Engines using EML lasers

Source: POET Technologies

KEY POINTS

- The Holy Grail in photonics is cost reduction (through efficiencies in process and materials) combined with lower power consumption. Throw in a smaller size, and higher performance, and customers should beat a path to your door. POET believes it can provide all four with its proprietary “optical interposer” based on a novel low-loss material that can allow multiple components to be integrated into a single package entirely at wafer-scale. What this means is that it can eliminate steps in the labor-intensive assembly process currently used when manufacturing optical transceivers. Manual assembly results in higher scrap rates, longer production times, and higher equipment costs. Also, its base material is far better suited to use in the management of light than silicon due to its lower loss and planar architecture, thus allowing lower powered lasers, resulting in lower power consumption and the ability to use less expensive lasers. POET hopes to disrupt the current market for photonics devices and have its Optical Engine platform become the standard in the industry.

- POET recently announced a Letter of Intent (LOI) to establish a \$50 million joint venture with Xiamen Sanan Integrated Circuit Co. Ltd. of Xiamen, China. We expect this deal to close before the end of September. POET will be contributing know how and a license to some of its technology, and Xiamen will contribute intellectual property, capital and production facilities. It will ultimately be 53% owned by Sanan IC and 47% by POET. Its first products will be optical engines to be sold to manufacturers of 100G, 200G, and 400G devices for use in data centers and telecommunications. This joint venture could generate as much as \$200-\$300 million in revenues per year by 2025 by taking modest market share.
- POET reinvented itself by selling its foundry in Singapore and redeploying the cash to pursue the development of products with higher return on equity due to demand, market growth, and low capital requirements.
- POET has presented NRE proposals to numerous companies targeting a variety of markets and we await news on at least three agreements in 2020.
- POET has start producing samples for customers and should be ready to ramp into volume production starting at the end of 2021.
- The stock currently trades at a fully diluted enterprise value of US\$115 million. The global market for optical transceivers is estimated to be \$5.7 billion in 2020 and projected to reach a value of \$9.2 billion by 2025, representing a CAGR of 10.0%, according to MarketsandMarkets Research Private Ltd. POET's product is a component of an optical transceiver and market is about a third of the transceiver market. If POET can secure even a small portion of that market with its unique offering, its valuation should far exceed its current price. We believe the stock could be worth \$1.80 based on \$200 million in revenues in 2025 at 8.1xs EV to Sales, discounted back to present value.

FINANCIALS

2020

POET expects that it will book NRE revenues starting in Q3. These NREs should be less than those previously earned as the company is now in the product development stage and fees earned would only be for product customization rather than basic technology development. It is still uncertain how these revenues will be accounted for with the two choices being milestone payments or flat monthly fees over the contract duration. These contracts should be from six to twelve months in length each, but until they are signed there is no way to know. We expect the company will issue press releases whenever any deals are signed. Until we see any announcements of NRE contracts, we are conservatively looking for \$150,000 in sales this year and a loss of \$14 million or \$0.05 per share. This is compared to no revenues and a loss of \$11.7 million from continuing operations in 2019 or \$0.04 per share.

2021

In 2021 we expect the possibility of several million dollars in NREs and the start of production revenues near the tail end of the year. We are starting with what could be a conservative estimate of \$5 million, which could increase as we see contracts announced and progress on production. We are looking for a loss of approximately \$15 million or \$0.06 per share.

VALUATION

POET's business model would make it similar to fabless semiconductor companies. Third parties would provide the production of its devices and we expect it would have margins similar to those companies below. They trade at an average of 8.1xs enterprise value to estimated 2021 revenues. Currently POET trades at an enterprise value of \$115 million using a fully diluted share count. We need to look further out to where we think revenues would be by 2025. If we say the joint venture is able to reach \$200 million in revenues by then and the rest of the business can ramp to \$100 million that would be \$200 million in revenues for POET in 2025. Using 8.1xs gives us an enterprise valuation of \$1.62 billion, a market value of \$1.63 billion or \$5.10 per share by 2024 using today's fully diluted share count. This would be a present value of \$1.80 per share discounted by 30% per year.

Source: POET Technologies

Since POET already qualifies (other than stock price) to uplist to NASDAQ, we believe it may uplist and reverse split sometime in the future when it has hit more milestones and certainly should it need to raise any capital. We do not believe this would happen in 2020 or any time before products are ready to go into large-scale production.

RISKS

- POET is using a startup and has no customers. It may not be able to close customers if its technology does not work or work within needed parameters. It has no revenues and was it to use up its current cash without generating revenues and reaching cash breakeven, to would need to raise new capital from investors, which could dilute current shareholders.
- Many potential customers may be hesitant to so business with a small, money losing start up, making market penetration even more difficult.
- Many of the employees work in states that have shut down businesses and travel and have had to work from home. They have been unable to go to its lab to continue to research and much of marketing efforts have been hindered by the inability to travel. It is not known when California, Pennsylvania, or New Jersey will lift their restrictions.
- The joint venture agreement is not yet finalized and may not materialize or take longer to complete and ramp than shareholders expect.

OWNERSHIP

POET Technologies has no institutional holdings and ownership by management and directors of its common shares is relatively small. However, if we were to take the number of options owned by management and directors (37.4 million), and use the fully diluted number of shares outstanding (317.5 million), it would show they have an 11.8% interest in the company. The company has no owners with more than five percent of the stock and we believe the largest shareholder has about 2% ownership and is based in Canada. 100% of the stock is in the float and is held by retail investors with the grand majority in Canada. Insiders' ownership of options is shown below:

	Options Held*	Ave Price (C\$)	Date of Last Grant	New Grants	Total	% of Total Pool**	% of TSO	Shares Held Outright	Options and Shares	% of TSO	Debtenture Amounts (CND \$)

DISCLOSURES

The following disclosures relate to relationships between Zacks Small-Cap Research (Zacks SCR), a division of Zacks Investment Research (ZIR), and the issuers covered by the Zacks SCR Analysts in the Small-Cap Universe.

ANALYST DISCLOSURES

Zacks SCR Analysts hereby certify that the view expressed in this research report or blog article accurately reflect the personal views of the analyst about the subject securities and issuers. Zacks SCR also certifies that no part of any analysts' compensation was, is, or will be, directly or indirectly, related to the recommendations or views expressed in this research report or blog article. Zacks SCR believes the information used for the creation of this report or blog article has been obtained from sources considered reliable, but we can neither guarantee nor represent the completeness or accuracy of the information herewith. Such information and the opinions expressed are subject to change without notice. The Zacks SCR Twitter is covered herein by this disclosure.

INVESTMENT BANKING AND FEES FOR SERVICE

Zacks SCR does not provide investment banking services nor has it received compensation for investment banking services from the issuers of the securities covered in this report or article.

Zacks SCR has received compensation from the issuer directly, from an investment manager, or from an investor relations consulting firm engaged by the issuer for providing non-investment banking services to this issuer and expects to receive additional compensation for such non-investment banking services provided to this issuer.

The non-investment banking services provided to the issuer include the preparation of this report, investor relations services, investment software, financial database analysis, organization of non-deal road shows, and attendance fees for conferences sponsored or co-sponsored by Zacks SCR.

Each issuer has entered into an agreement with Zacks to provide continuous independent research for a period of no less than one year in consideration of quarterly payments totaling a maximum fee of \$40,000 annually.

POLICY DISCLOSURES

This report provides an objective valuation of the issuer today and expected valuations of the issuer at various future dates based on applying standard investment valuation methodologies to the revenue and EPS forecasts made by the SCR Analyst of the issuer's business.

SCR Analysts are restricted from holding or trading securities in the issuers that they cover. ZIR and Zacks SCR do not make a market in any security followed by SCR nor do they act as dealers in these securities. Each Zacks SCR Analyst has full discretion over the Valuation of the issuer included in this report based on his or her own due diligence. SCR Analysts are paid based on the number of companies they cover.

SCR Analyst compensation is not, was not, nor will be, directly or indirectly, related to the specific valuations or views expressed in any report or article.

ADDITIONAL INFORMATION

Additional information is available upon request. Zacks SCR reports and articles are based on data obtained from sources that it believes to be reliable, but are not guaranteed to be accurate nor do they purport to be complete. Because of individual financial or investment objectives and/or financial circumstances, this report or article should not be construed as advice designed to meet the particular investment needs of any investor. Investing involves risk. Any opinions expressed by Zacks SCR Analysts are subject to change without notice. Reports or articles or Tweets are not to be construed as an offer or solicitation of an offer to buy or sell the securities herein mentioned.

CANADIAN COVERAGE

This research report is a product of Zacks SCR and prepared by a research analyst who is employed by or is a consultant to Zacks SCR. The research analyst preparing the research report is resident outside of Canada, and is not an associated person of any Canadian registered adviser and/or dealer and, therefore, the analyst is not subject to supervision by a Canadian registered adviser and/or dealer, and is not required to satisfy the regulatory licensing requirements of any Canadian provincial securities regulators, the Investment Industry Regulatory Organization of Canada and is not required to otherwise comply with Canadian rules or regulations.
