### **Veeco Chemical Compliance Policy Statement**

Veeco is committed to the management and mitigation of risks related to the use of hazardous substances in our products, as part of our commitment to sustainability and in furtherance of our core values of putting our customers first and never compromising on safety. We are committed to complying with international regulations related to chemical compliance, including:

- European Union Restriction of the use of certain Hazardous Substances (E.U. RoHS) in electrical and electronic equipment, also known as Directives 2011/65/EU and Amendment 2015/863).
- China RoHS2 directive officially known as Management Methods for the Restriction of the Use of Hazardous Substances in Electrical and Electronic Products 2016/01/21, followed by standards GB/T 26572-2011 and SJ/T 11364-2014.
- European Union Registration, Evaluation, Authorization and Restriction of Chemicals (REACH), also known as Regulation (EC) No 1907/2006.
- U.S. Toxic Substances Control Act of 1976 and Frank R. Lautenberg Chemical Safety Act for the 21st Century of 2016, collectively known as TSCA and codified in 40 CFR Subchapter R.
- U.S. Environmental Protection Agency Regulation 40 CFR Part 705, Toxic Substances Control Act Reporting and Recordkeeping Requirements for Perfluoroalkyl and Polyfluoroalkyl Substances

Although we do not manufacture chemicals or substances that would be governed by the above regulations, some of these substances may be found in the components, parts and materials used to manufacture our products. As such, we have partnered with a global leader in supply chain data management and sustainability to help us conduct bi-annual due diligence of our suppliers to identify if any of these substances are included in the components, materials or finishes they supply to us. If any such substances are found in amounts exceeding the allowable thresholds, Veeco assesses and, to the extent practicable, replaces the relevant components with compliant components. If no substitute is practically available – whether due to impacts on safety, performance or otherwise – Veeco discloses the same in accordance with the relevant regulations.

Veeco maintains written internal policies, procedures, and standards to help ensure compliance with regulations, and to help enable our engineers to design for compliance. We periodically review and update these policies, procedures and standards as new regulations are issued or existing regulations are revised. In addition and when appropriate, we seek to improve the resources and tools available to our engineers to help facilitate the selection and specification of compliant components, materials and finishes in new designs.
