NON-GAAP PERFORMANCE MEASURES

The Company presents the non-GAAP performance measures set forth below. These measures should not be considered as alternatives to, or more meaningful than, net income (calculated in accordance with GAAP) or other GAAP financial measures, as an indicator of financial performance and are not alternatives to, or more meaningful than, cash flow from operating activities (calculated in accordance with GAAP) as a measure of liquidity. Non-GAAP performance measures have limitations as they do not include all items of income and expense that affect operations, and accordingly, should always be considered as supplemental financial results to those calculated in accordance with GAAP. The Company's computation of these non-GAAP performance measures may differ in certain respects from the methodology utilized by other REITs and, therefore, may not be comparable to similarly titled measures presented by such other REITs. Investors are cautioned that items excluded from these non-GAAP performance measures are relevant to understanding and addressing financial performance. A reconciliation of these non-GAAP performance measures to net income is presented in the attached table.

NAREIT FFO

NAREIT FFO is a supplemental, non-GAAP performance measure utilized to evaluate the operating and financial performance of real estate companies. The National Association of Real Estate Investment Trusts ("NAREIT") defines FFO as net income (loss), calculated in accordance with GAAP, excluding (i) depreciation and amortization related to real estate, (ii) gains and losses from the sale of certain real estate assets, (iii) gains and losses from change in control, (iv) impairment write-downs of certain real estate assets and investments in entities when the impairment is directly attributable to decreases in the value of depreciable real estate held by the entity and (v) after adjustments for unconsolidated joint ventures calculated to reflect FFO on the same basis. Considering the nature of its business as a real estate owner and operator, the Company believes that NAREIT FFO is useful to investors in measuring its operating and financial performance because the definition excludes items included in net income that do not relate to or are not indicative of the Company's operating and financial performance, such as depreciation and amortization related to real estate, and items which can make periodic and peer analyses of operating and financial performance more difficult, such as gains and losses from the sale of certain real estate assets and impairment write-downs of certain real estate assets.

Same Property NOI

Same property NOI is a supplemental, non-GAAP performance measure utilized to evaluate the operating performance of real estate companies. Same property NOI is calculated (using properties owned for the entirety of both periods and excluding properties under development and completed new development properties which have been stabilized for less than one year) as total property revenues (base rent, expense reimbursements, adjustments for revenues deemed uncollectible, ancillary and other rental income, percentage rents and other revenues) less direct property operating expenses (operating costs and real estate taxes). Same property NOI excludes (i) corporate level expenses (including general and administrative), (ii) lease termination fees, (iii) straight-line rental income, net, (iv) accretion of below-market leases, net of amortization of above-market leases and tenant inducements, (v) straight-line ground rent expense, and (vi) income / expense associated with the Company's captive insurance company. Considering the nature of its business as a real estate owner and operator, the Company believes that same property NOI is useful to investors in measuring the operating performance of its property portfolio because the definition excludes various items included in net income that do not relate to, or are not indicative of, the operating performance of the Company's properties, such as depreciation and amortization and corporate level expenses (including general and administrative), and because it eliminates disparities in NOI due to the acquisition or disposition of properties or the stabilization of completed new development properties during the period presented and therefore provides a more consistent metric for comparing the operating performance of the Company's real estate between periods.
