As part of P&G’s ambition to net zero by 2040, we are committed to purchasing 100% renewable electricity by 2030 to help pace our progress. Our sites within the US, Canada, China, and Europe are just a few of those already using 100% renewable electricity today, and we have accelerated progress to 97% purchased renewable electricity globally. We’ll continue to transition to reach 100% renewable electricity – across all of our 140+ sites in nearly 40 countries.
